- ‘Brexit’ casts a long shadow
- Conclusion

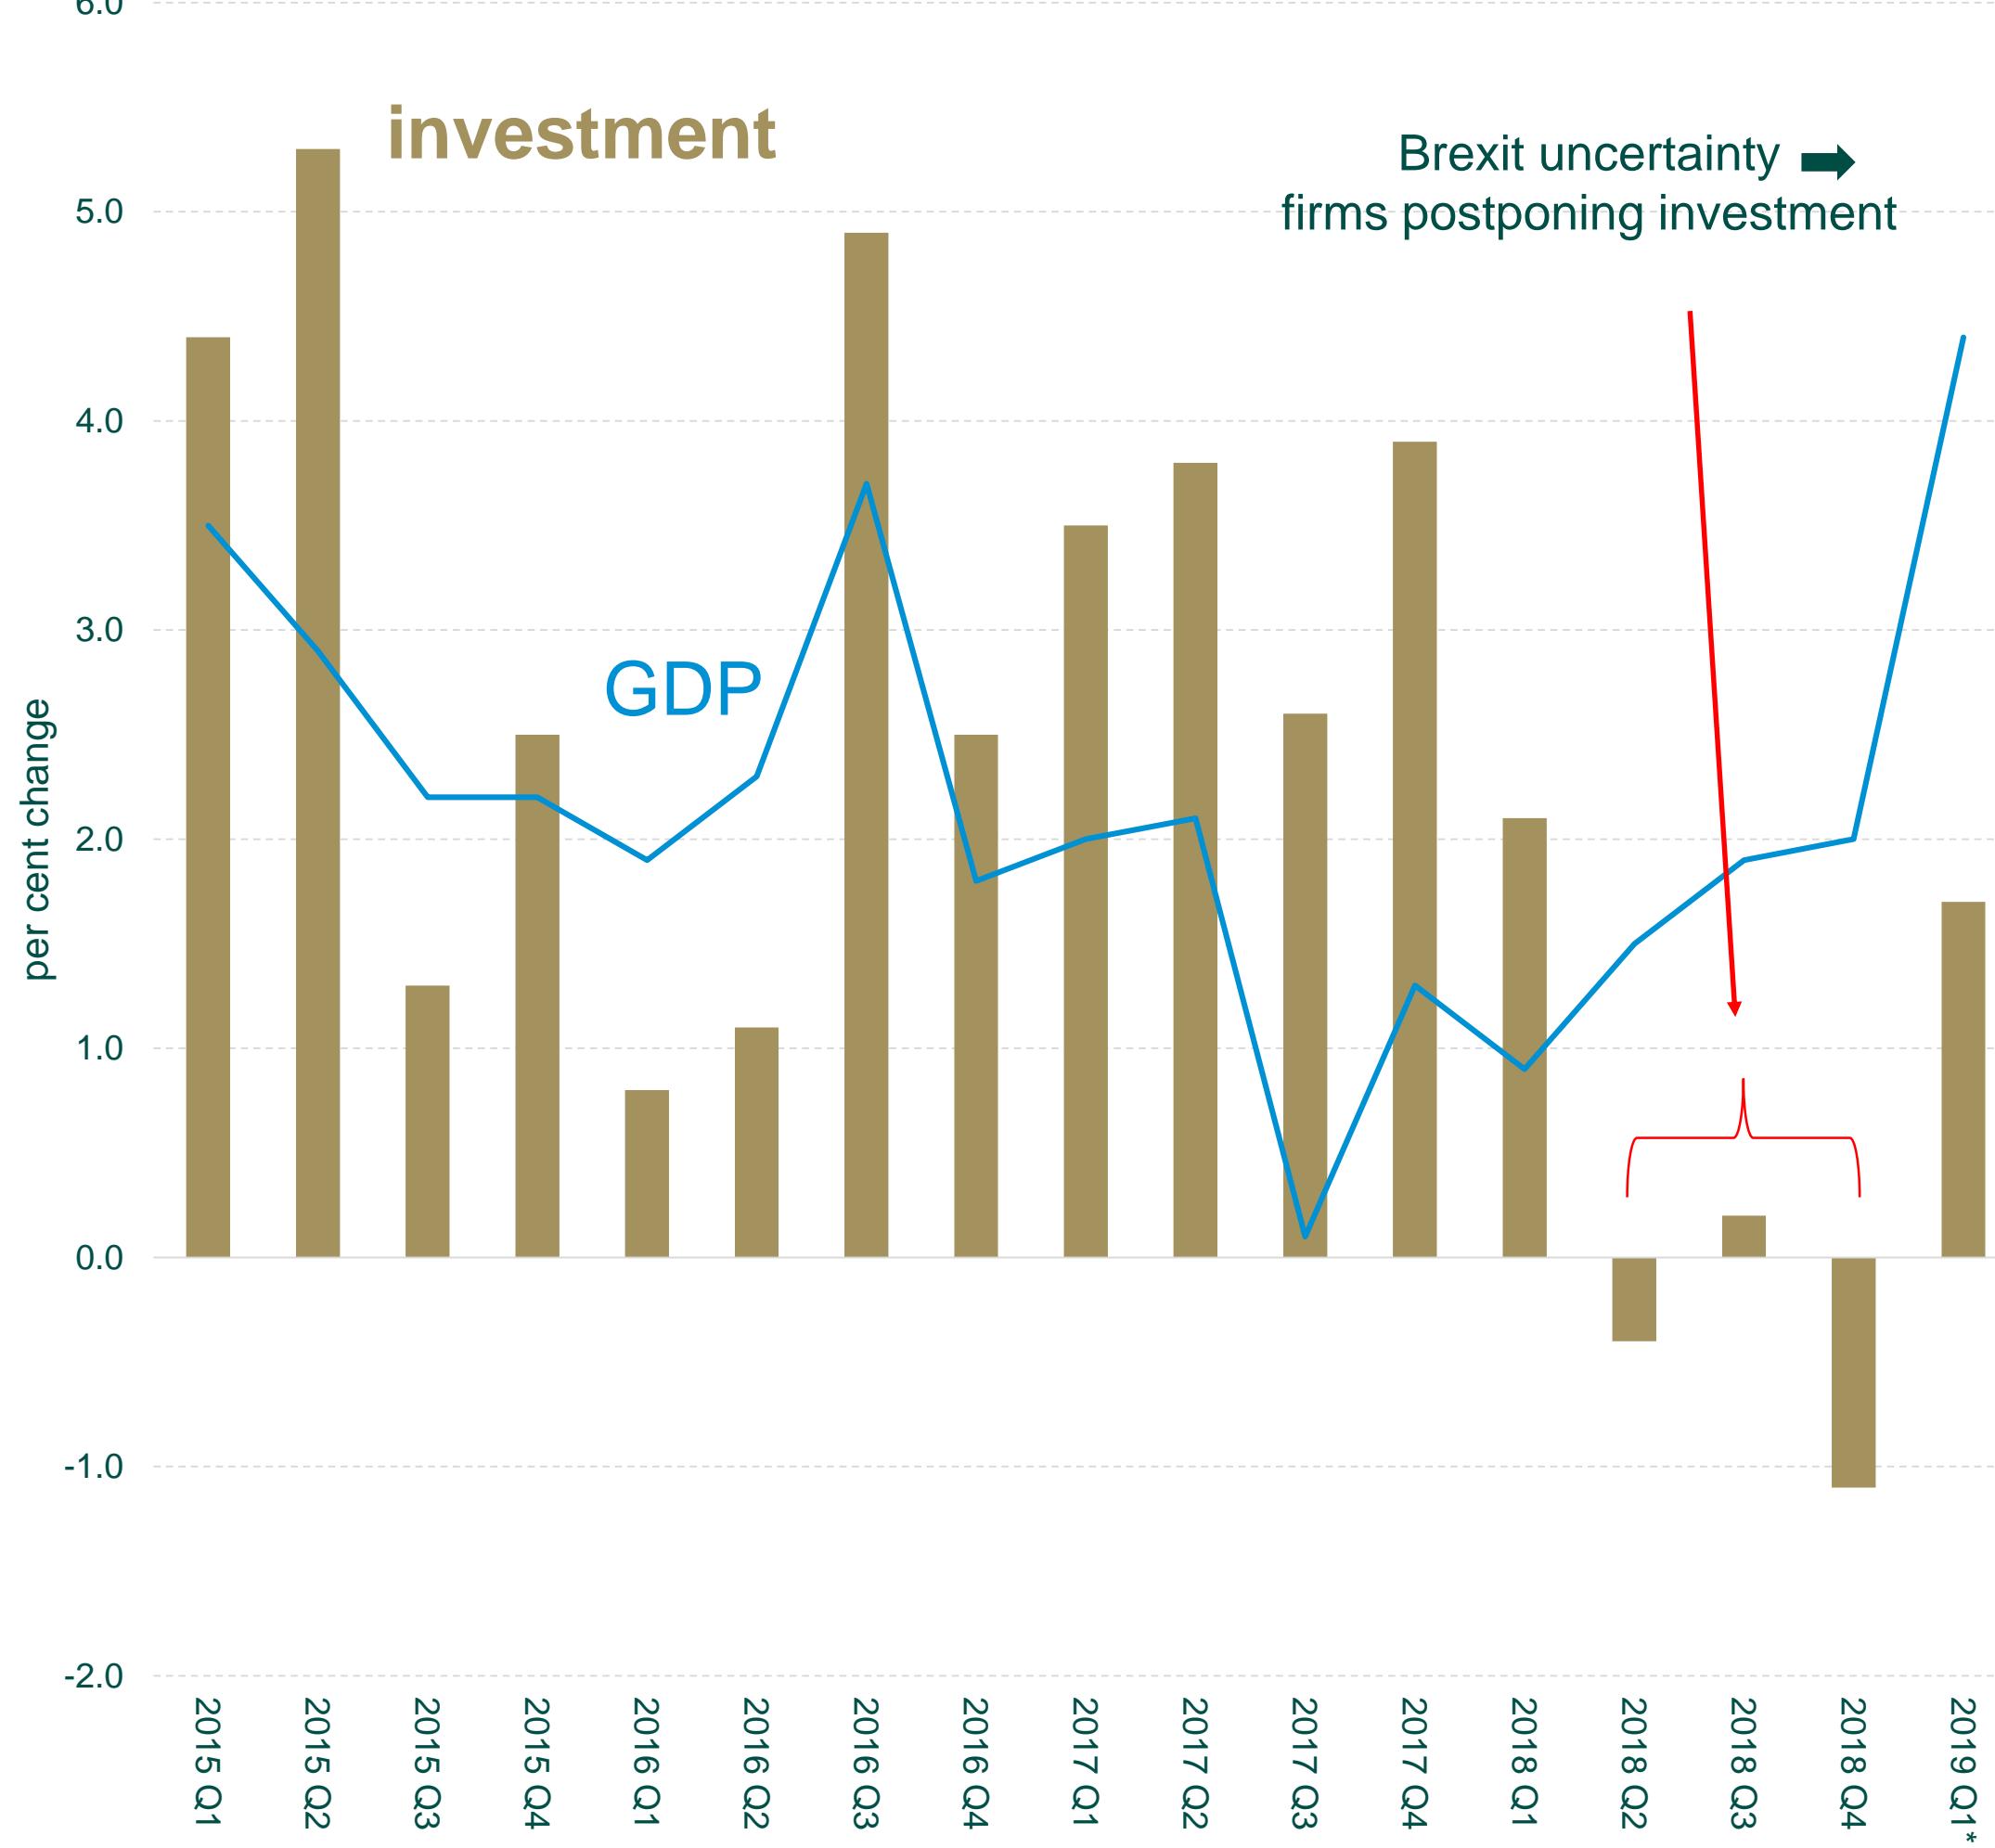

External demand: headwinds picking up

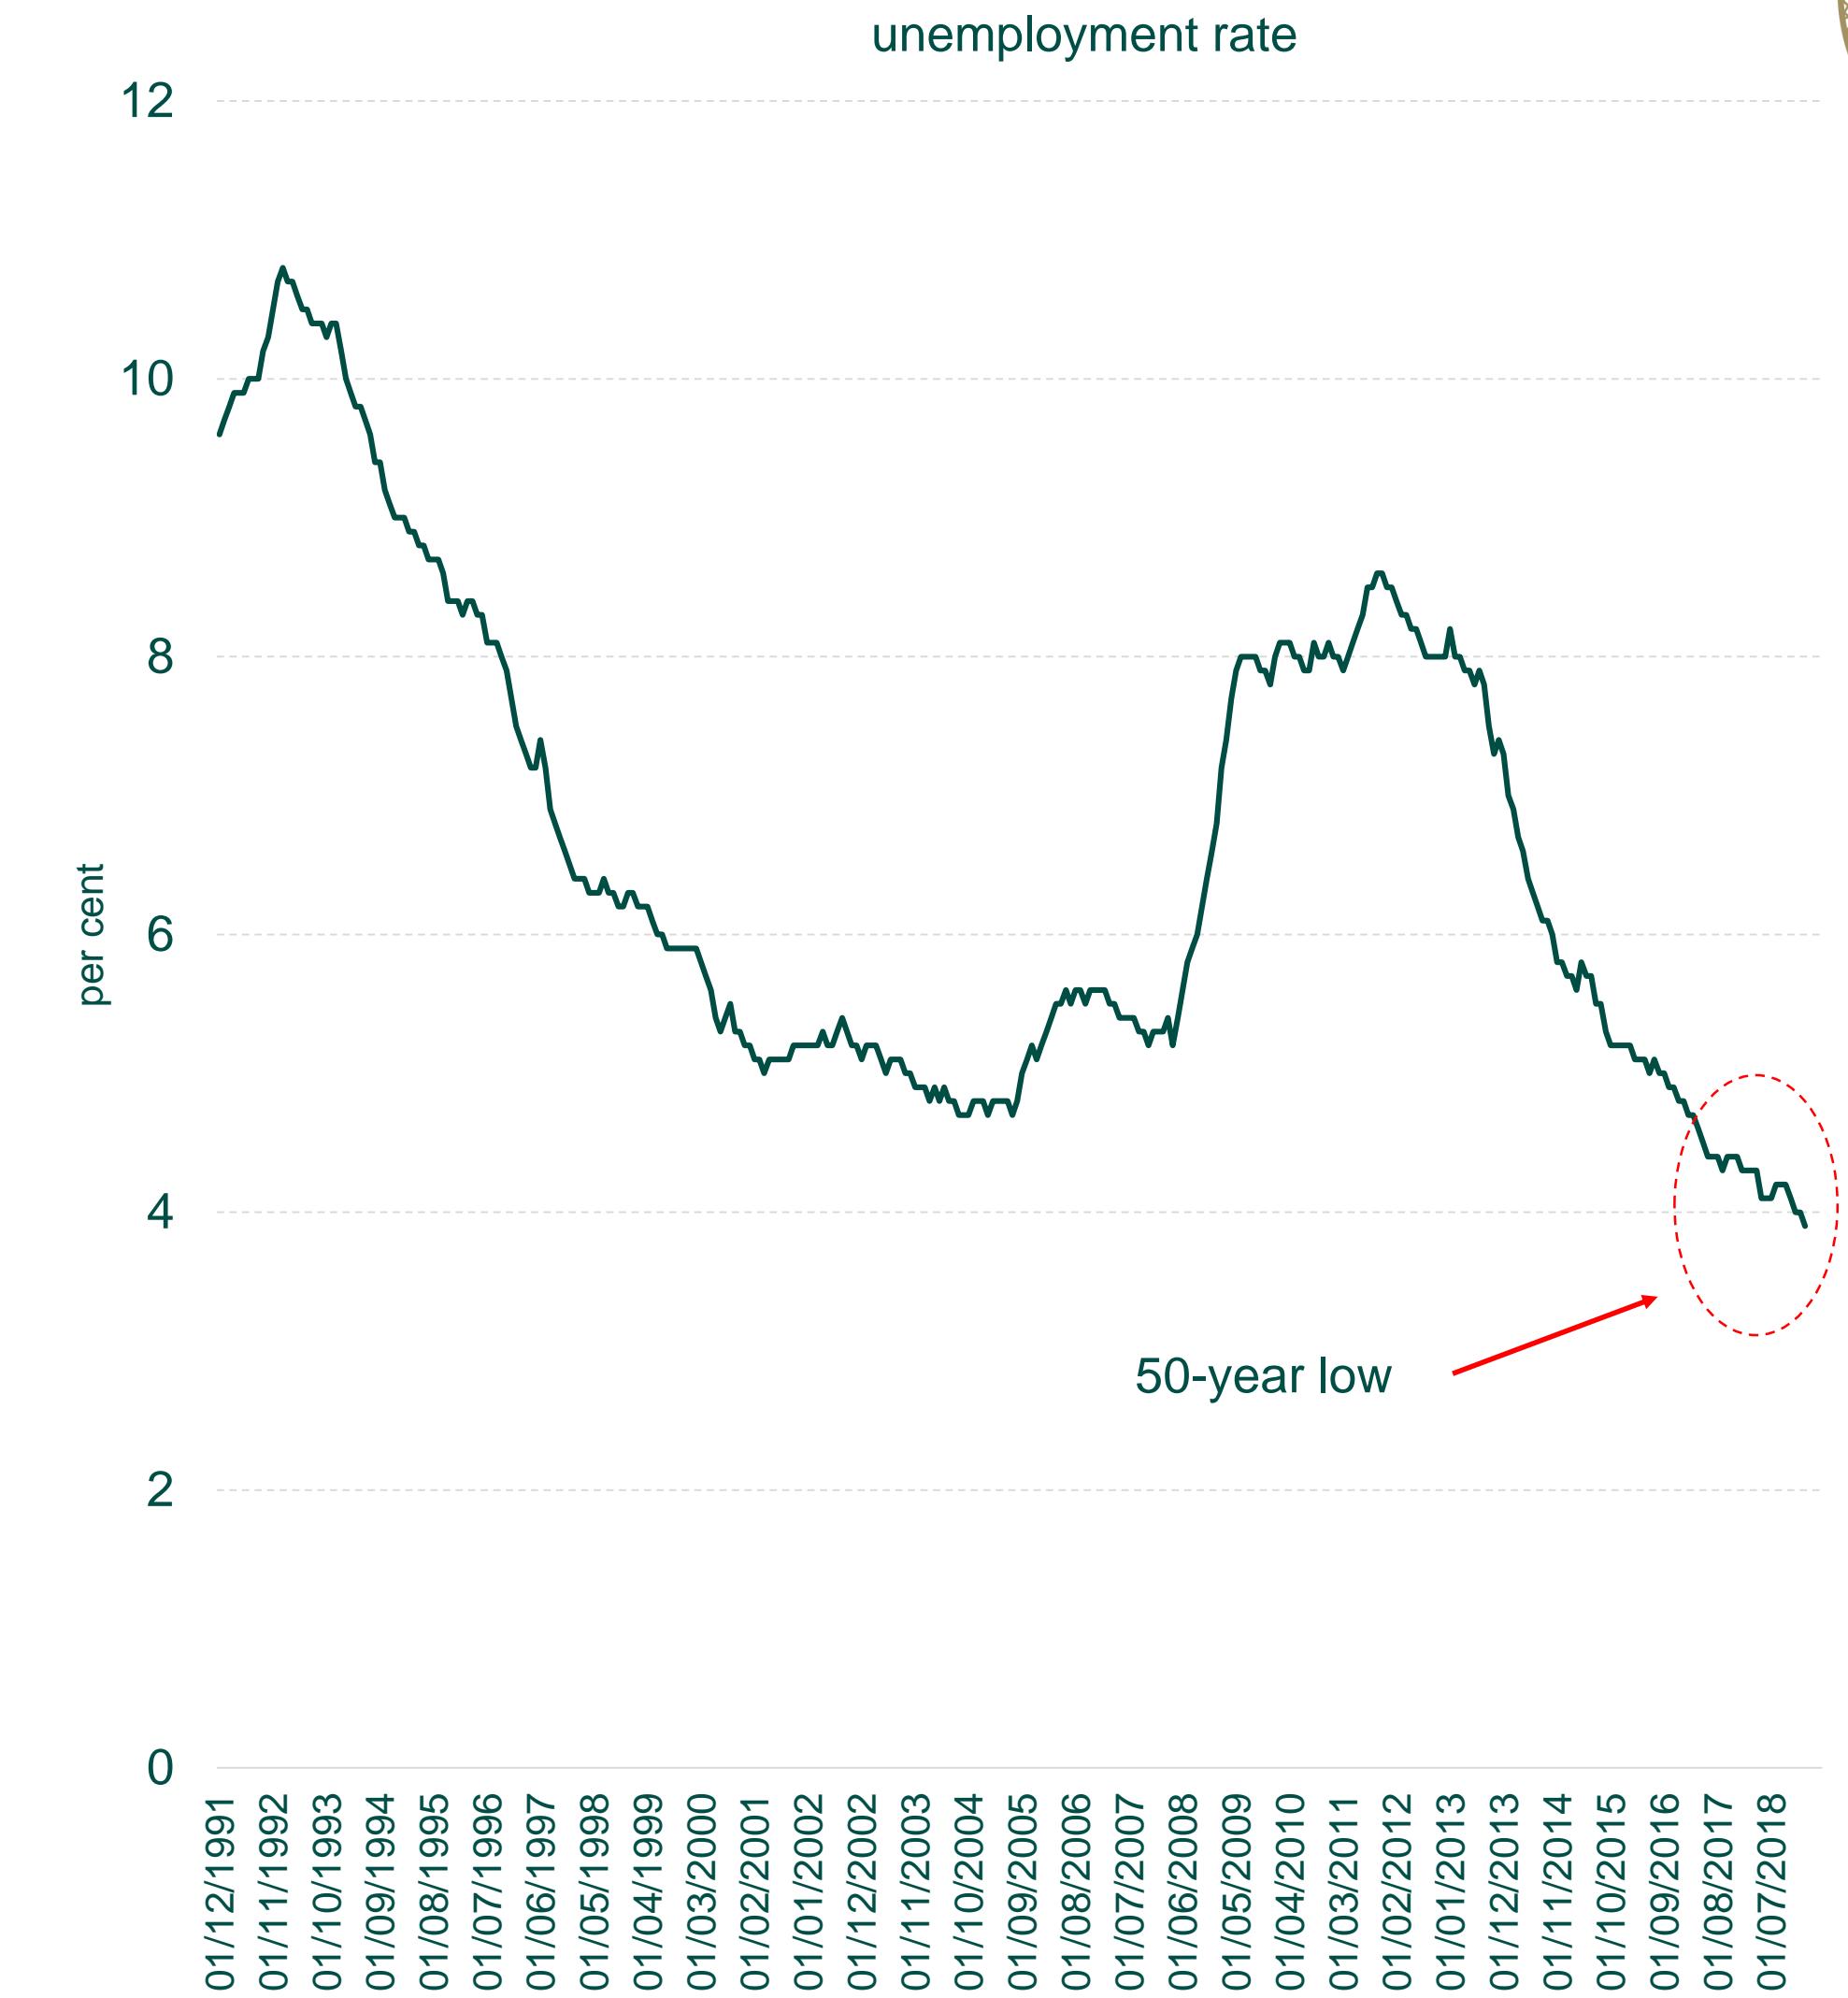

UK: business substituting labour for capital

investment and output, y/y growth in the UK economy

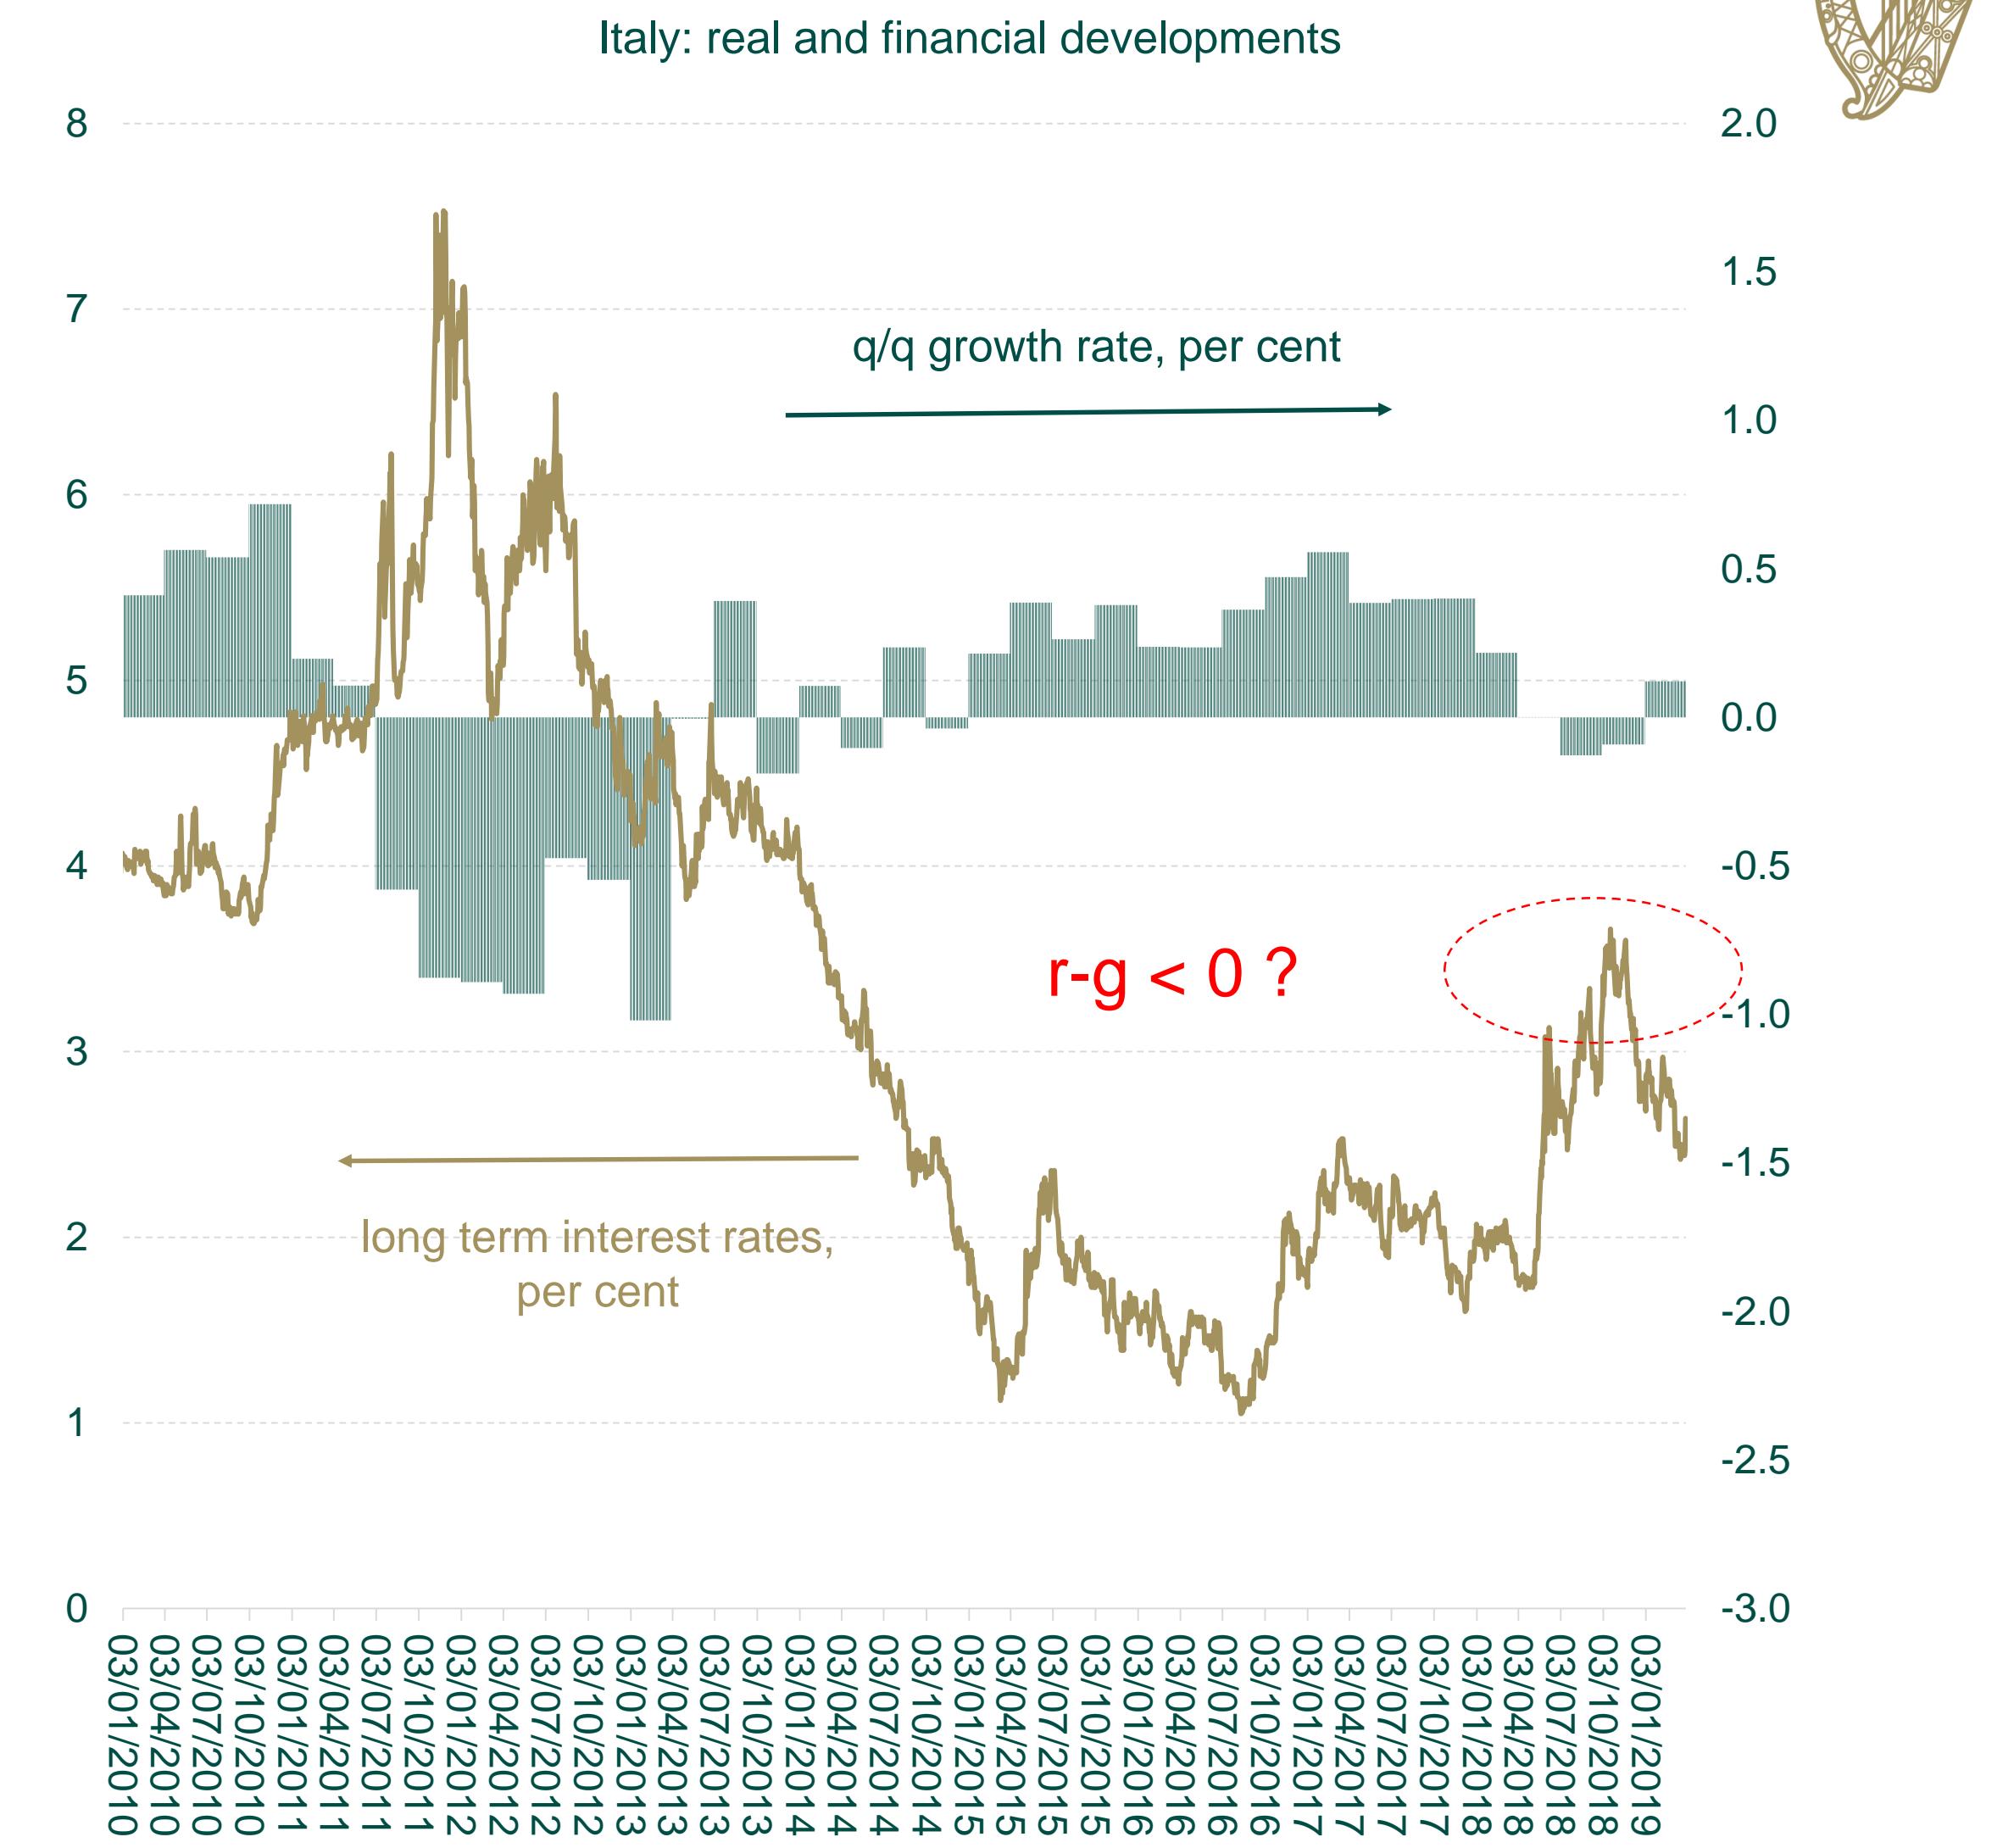

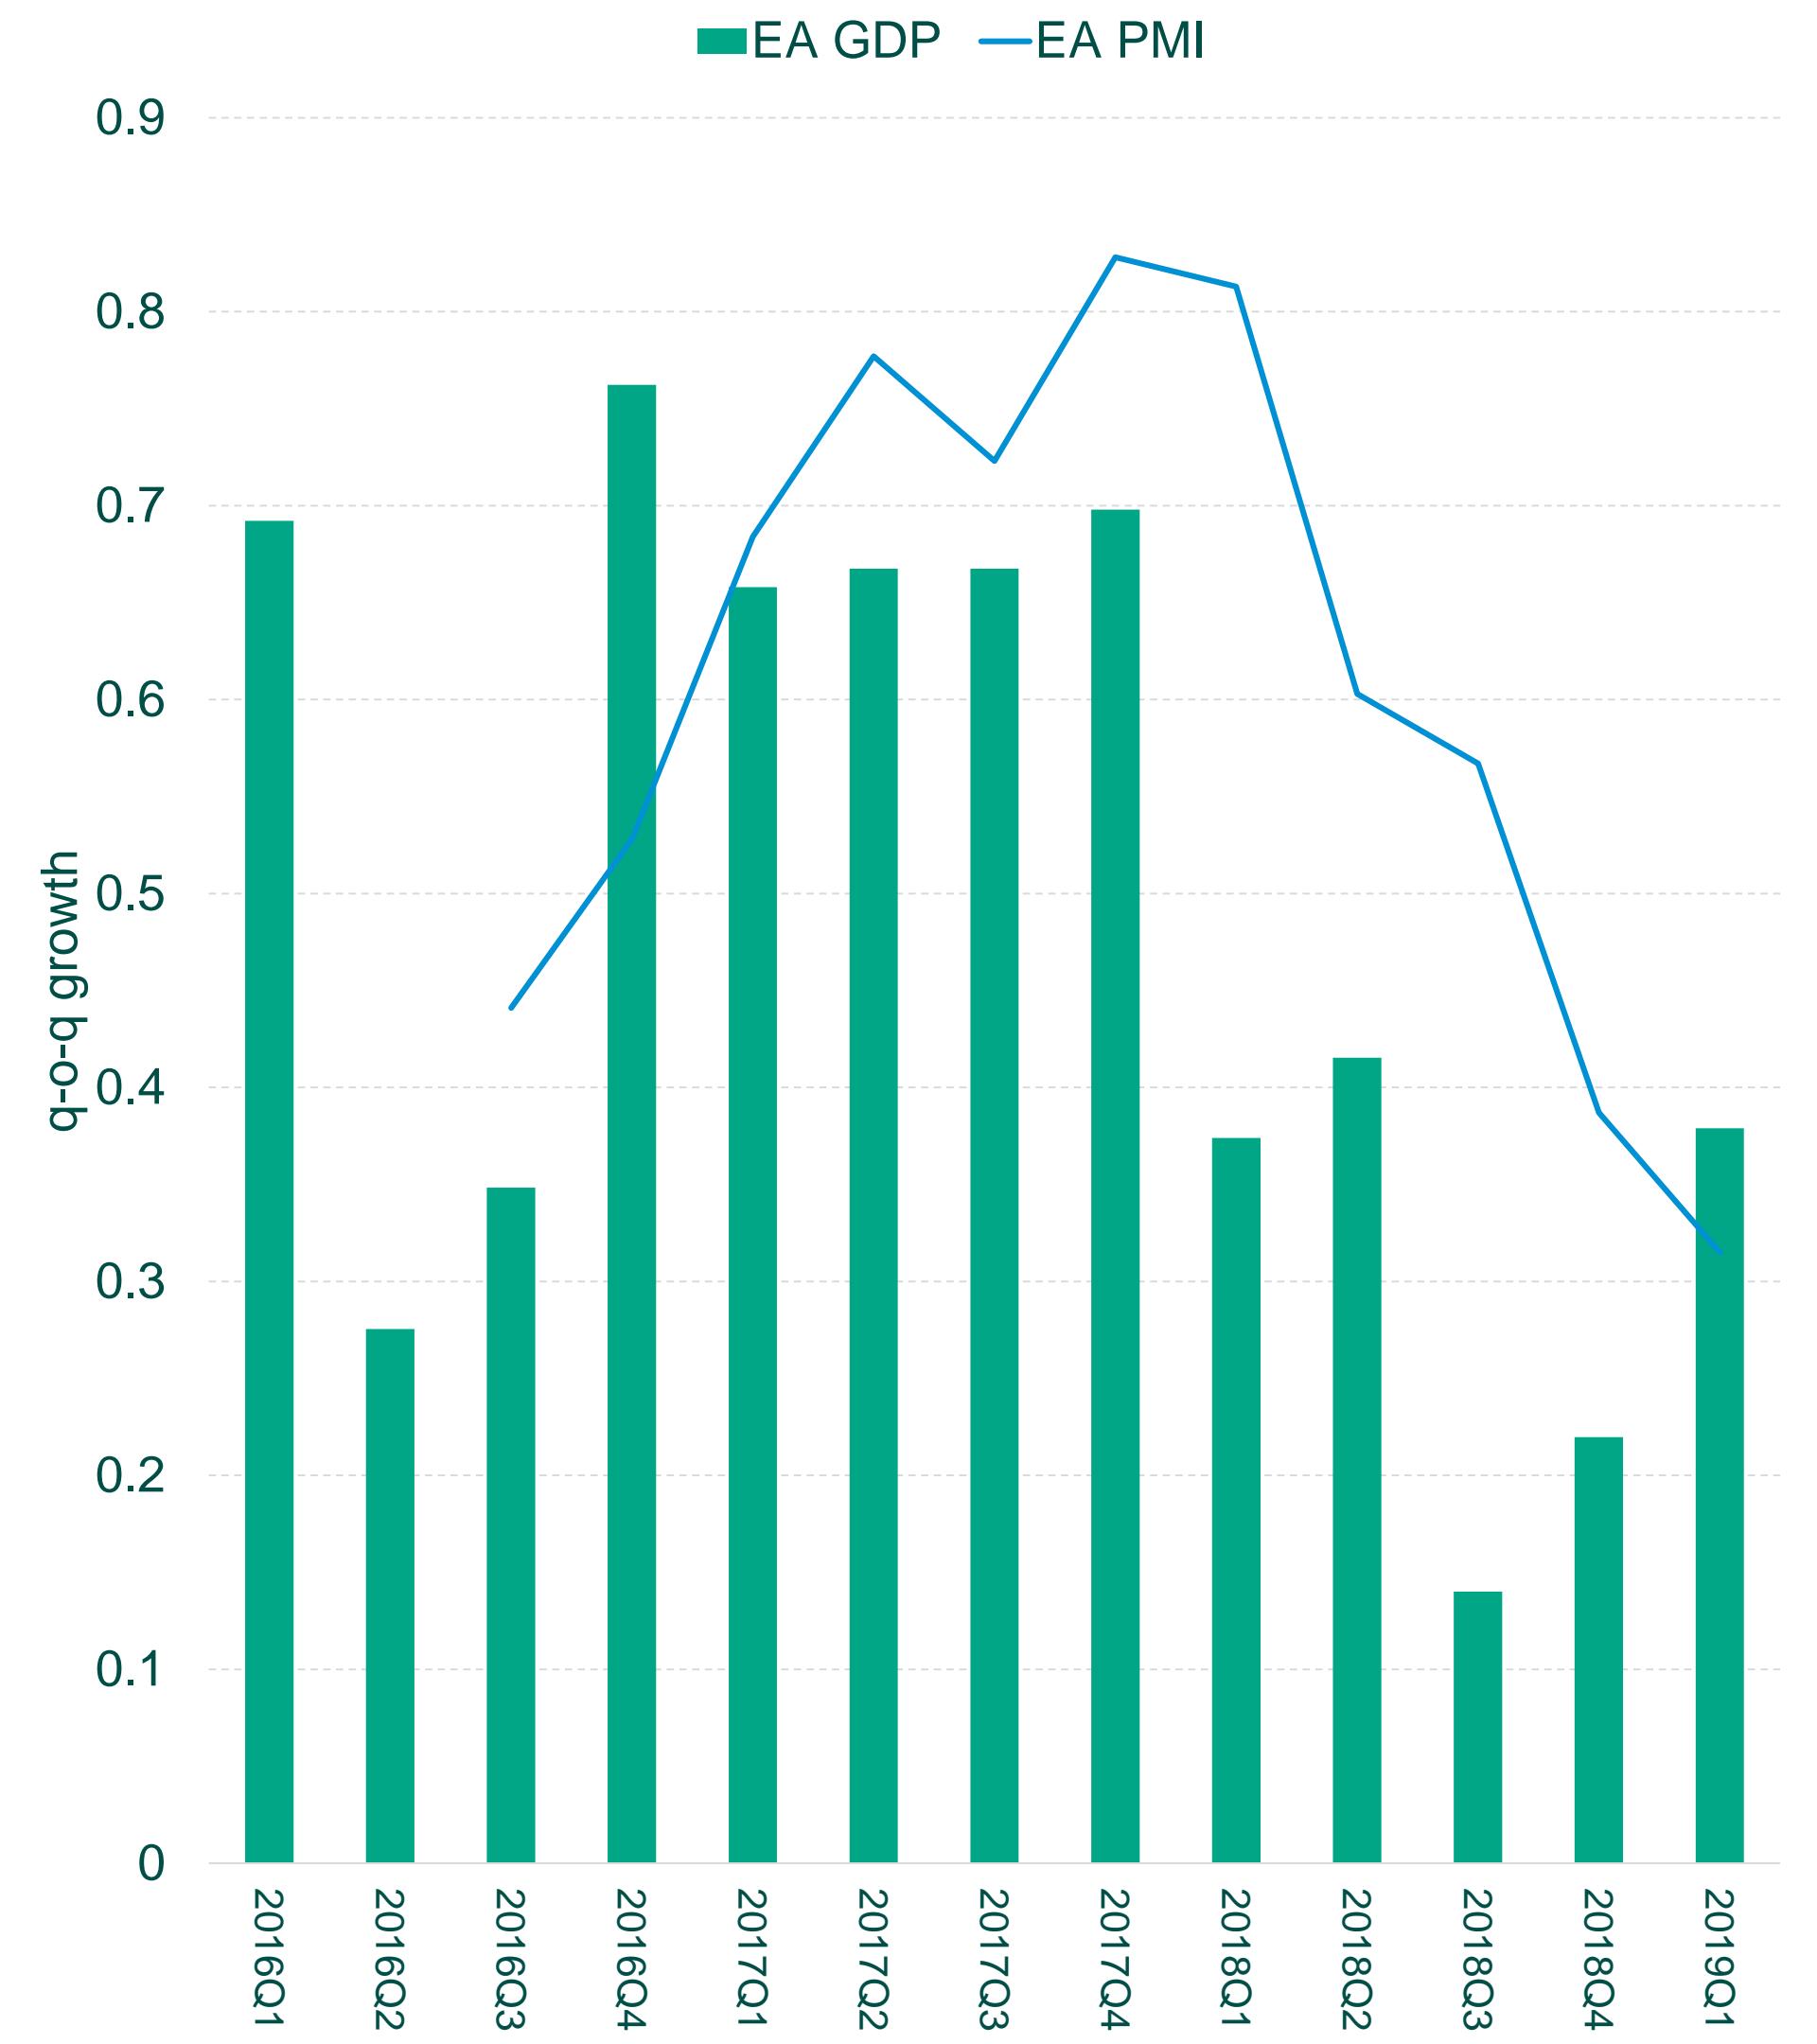

Brexit uncertainty ➔
firms postponing investment

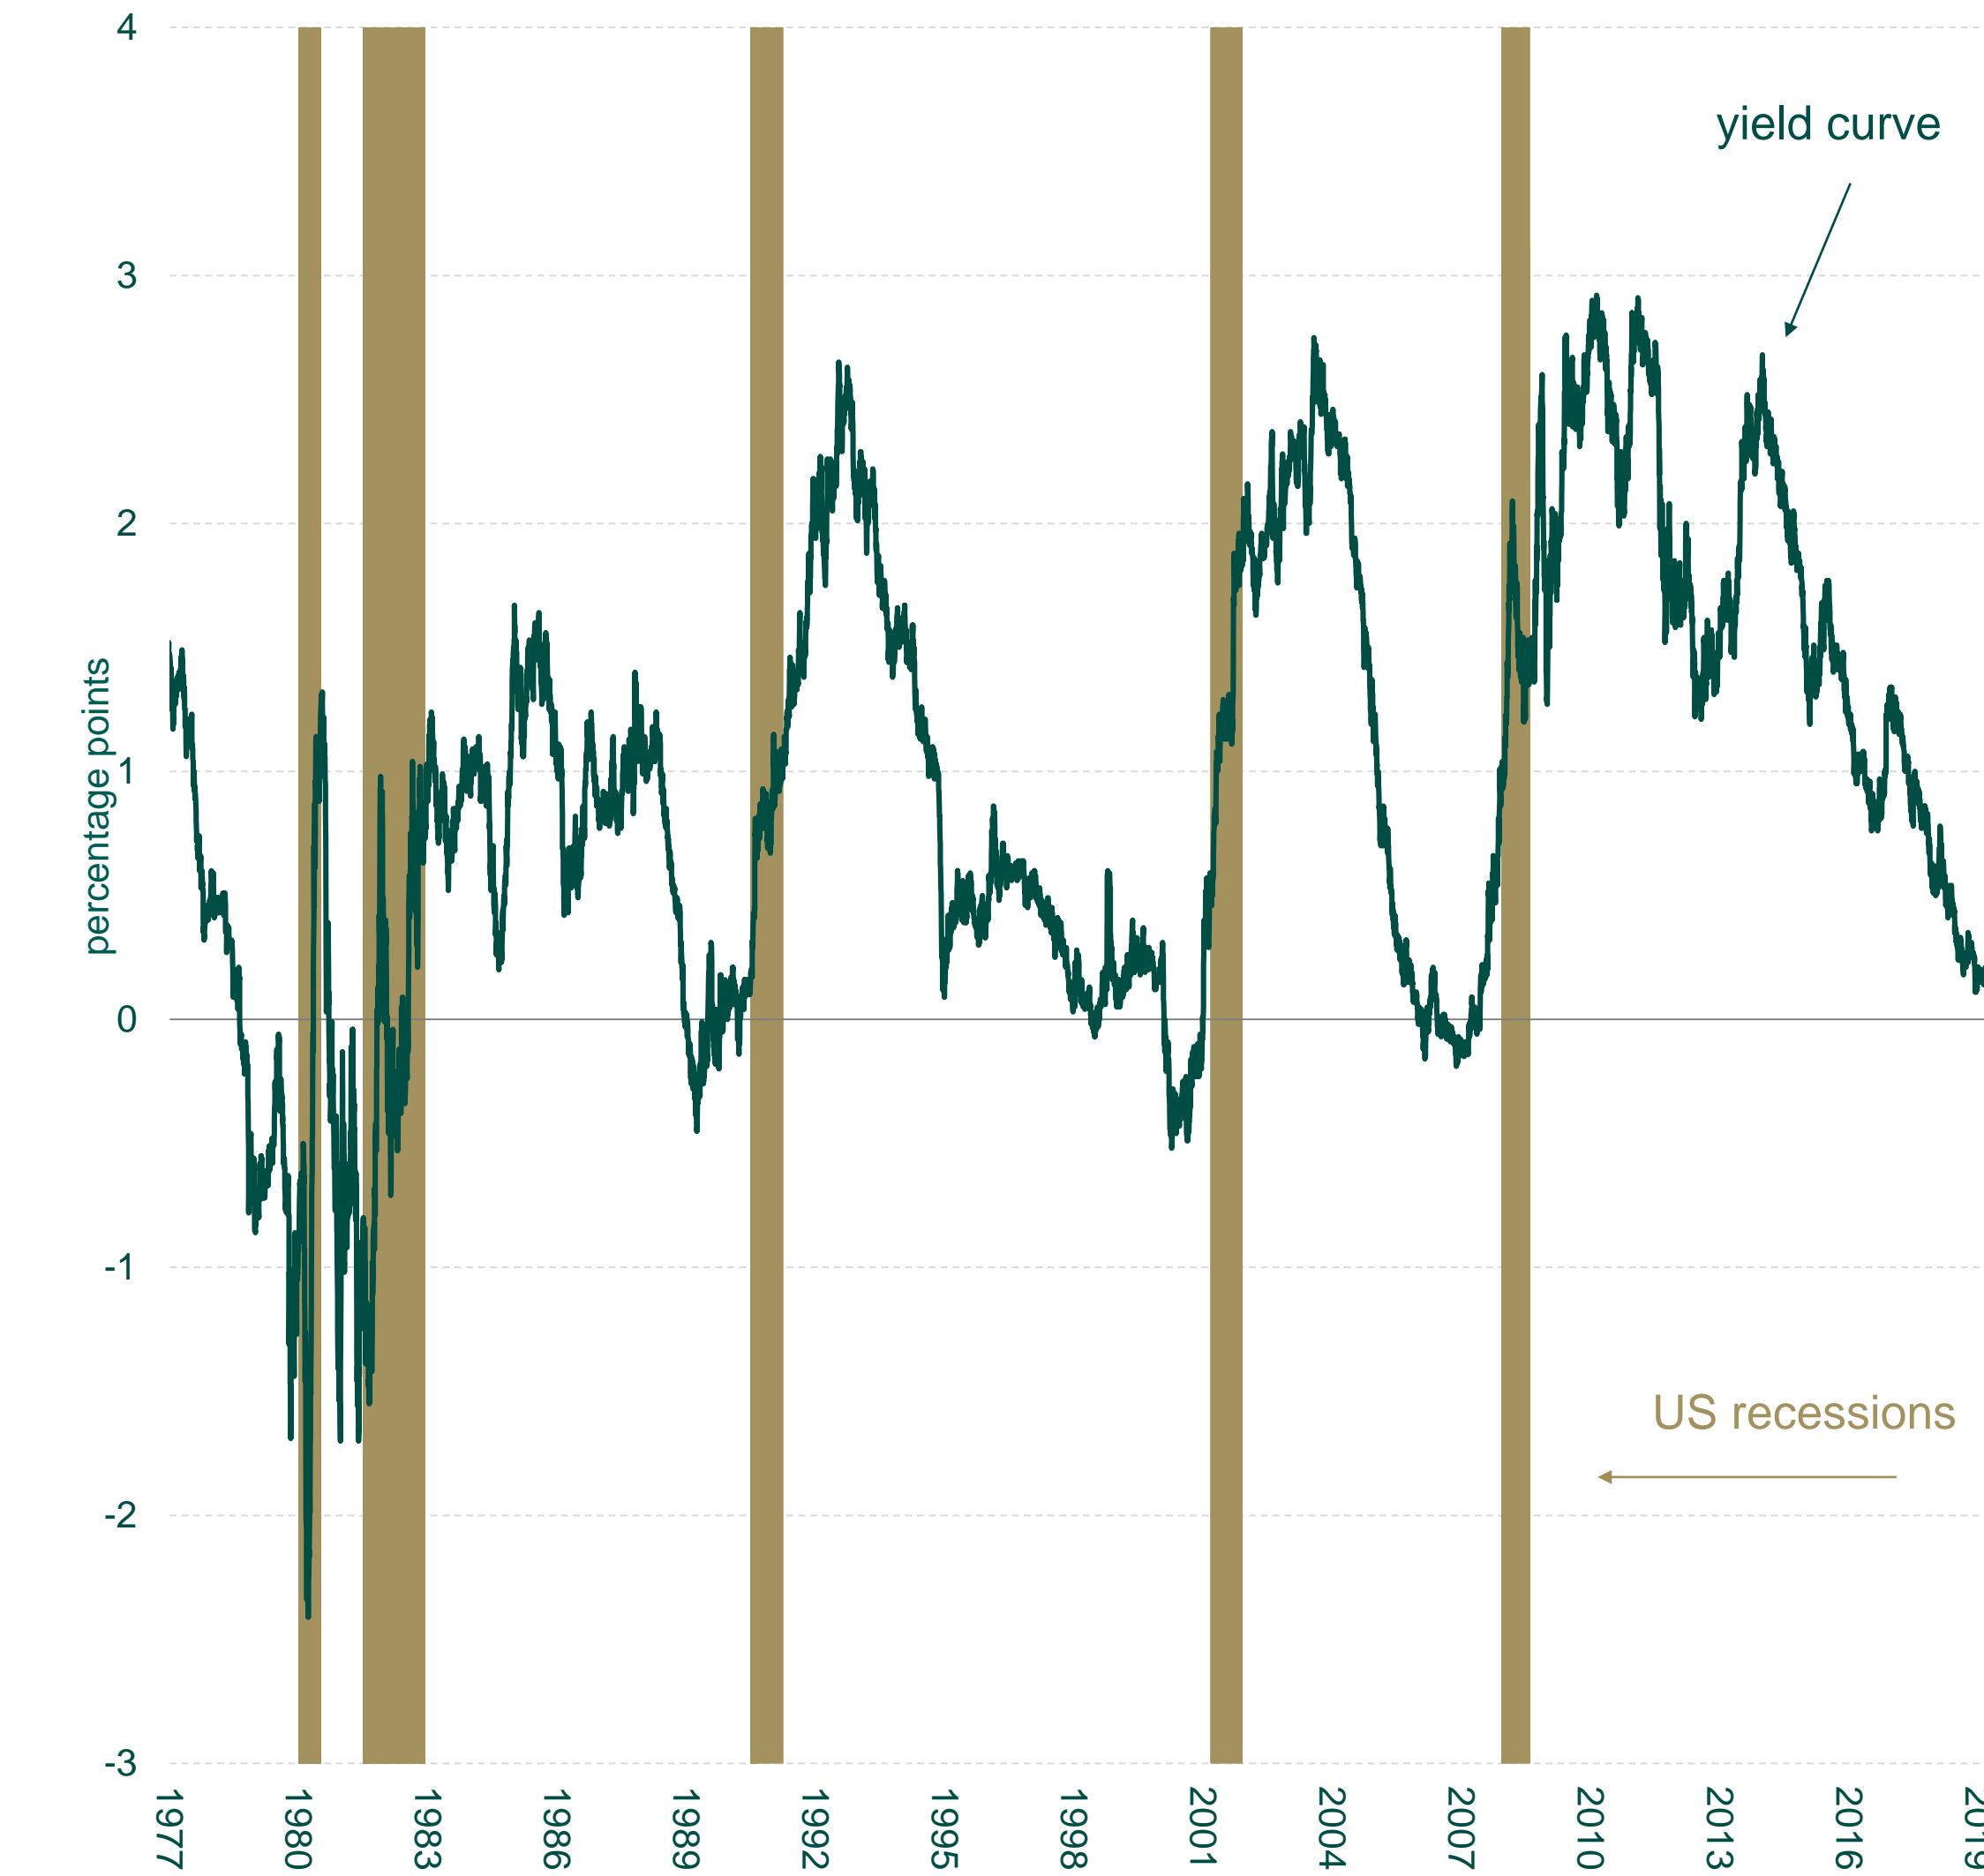

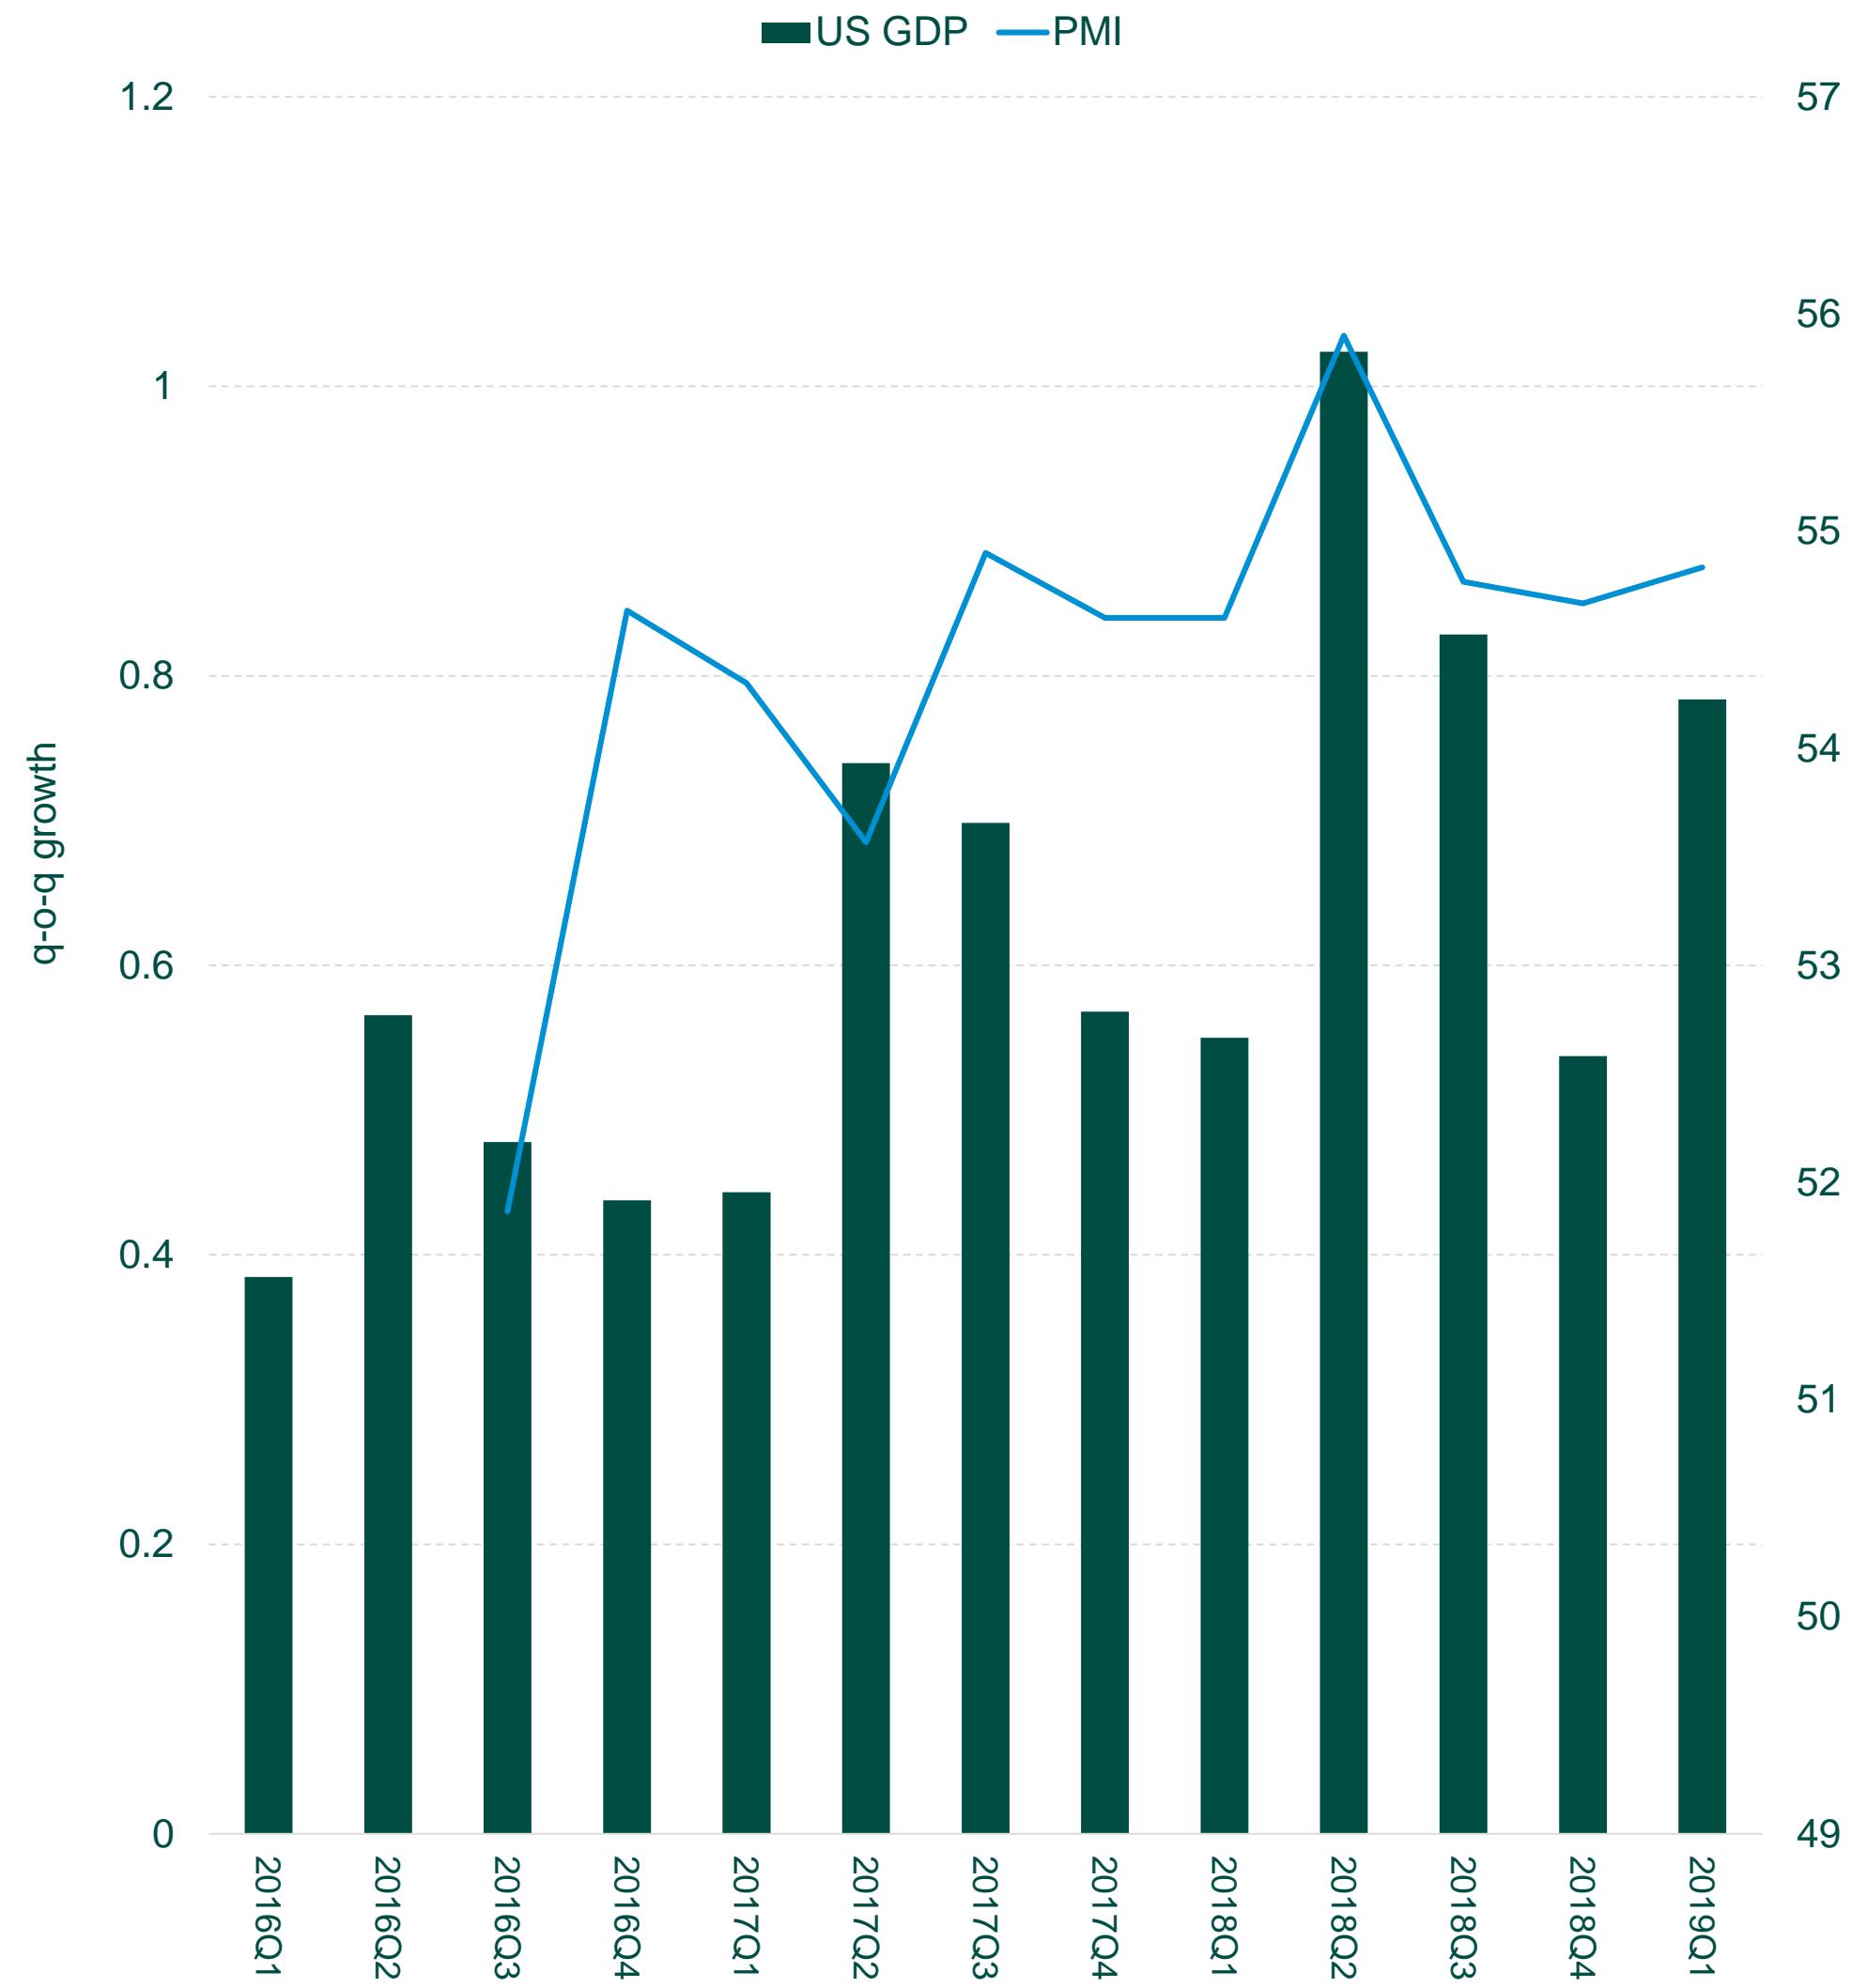

50-year low

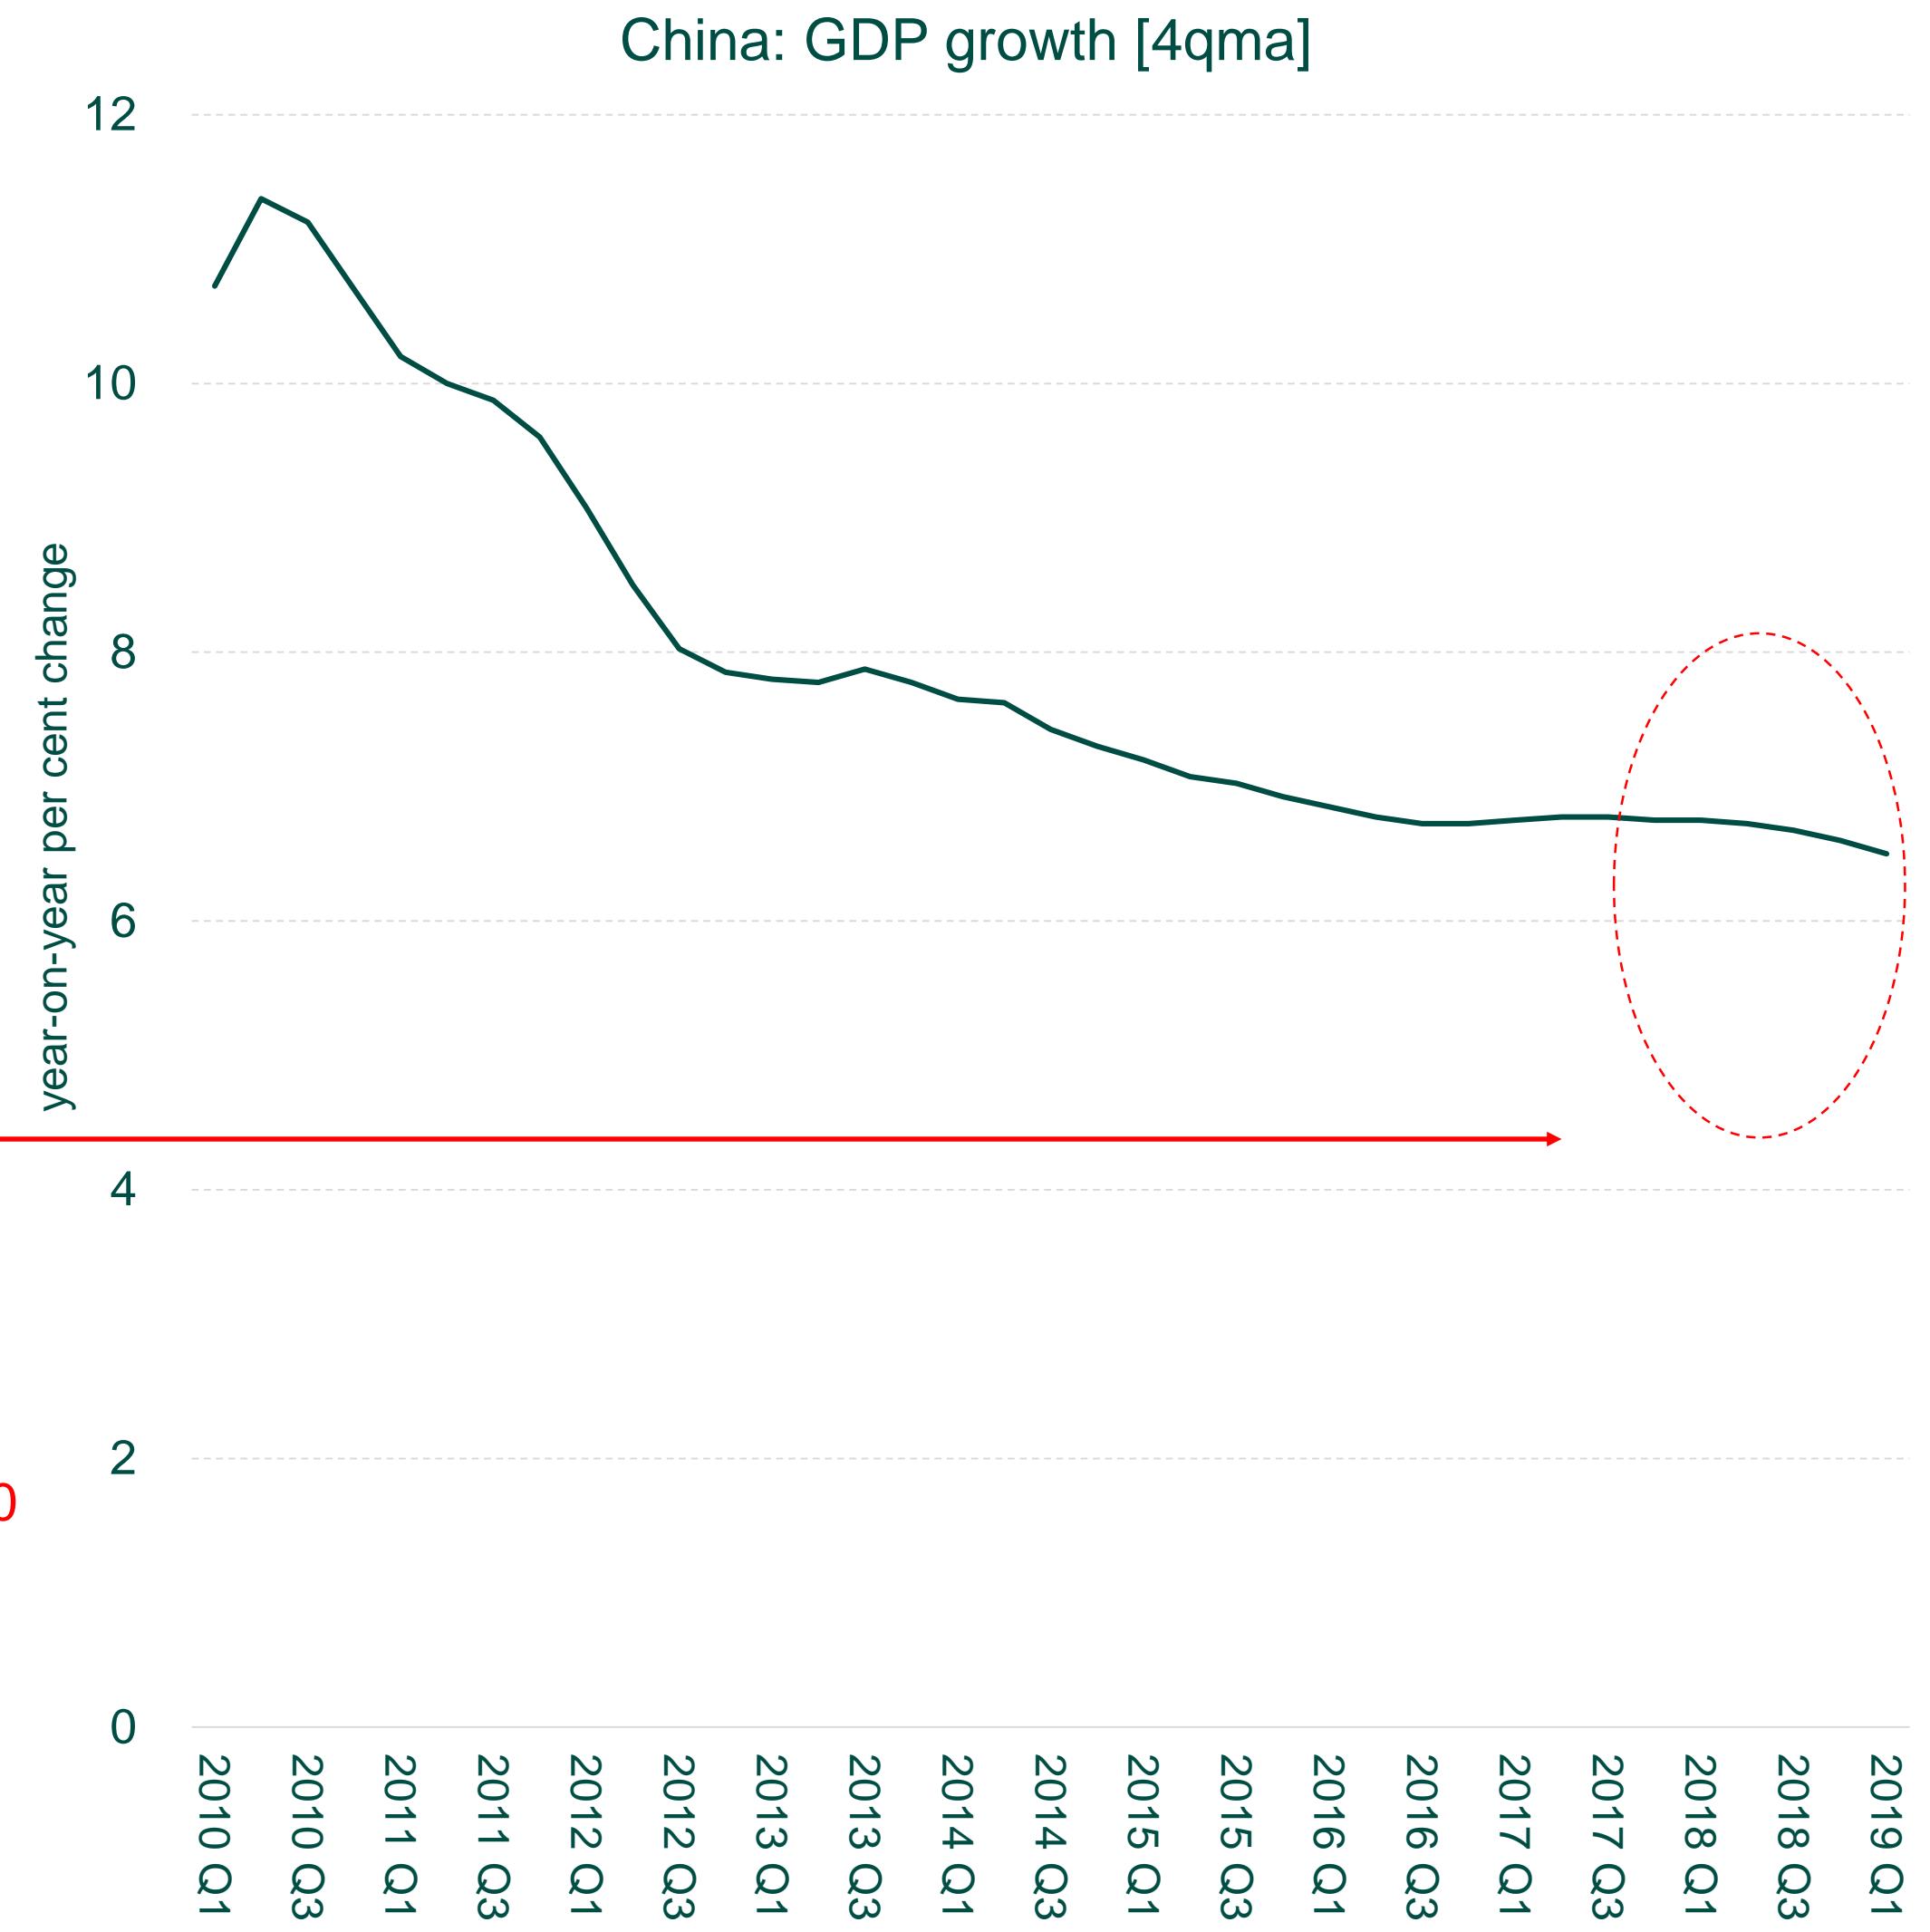

euro area: re-domination risk emerging?

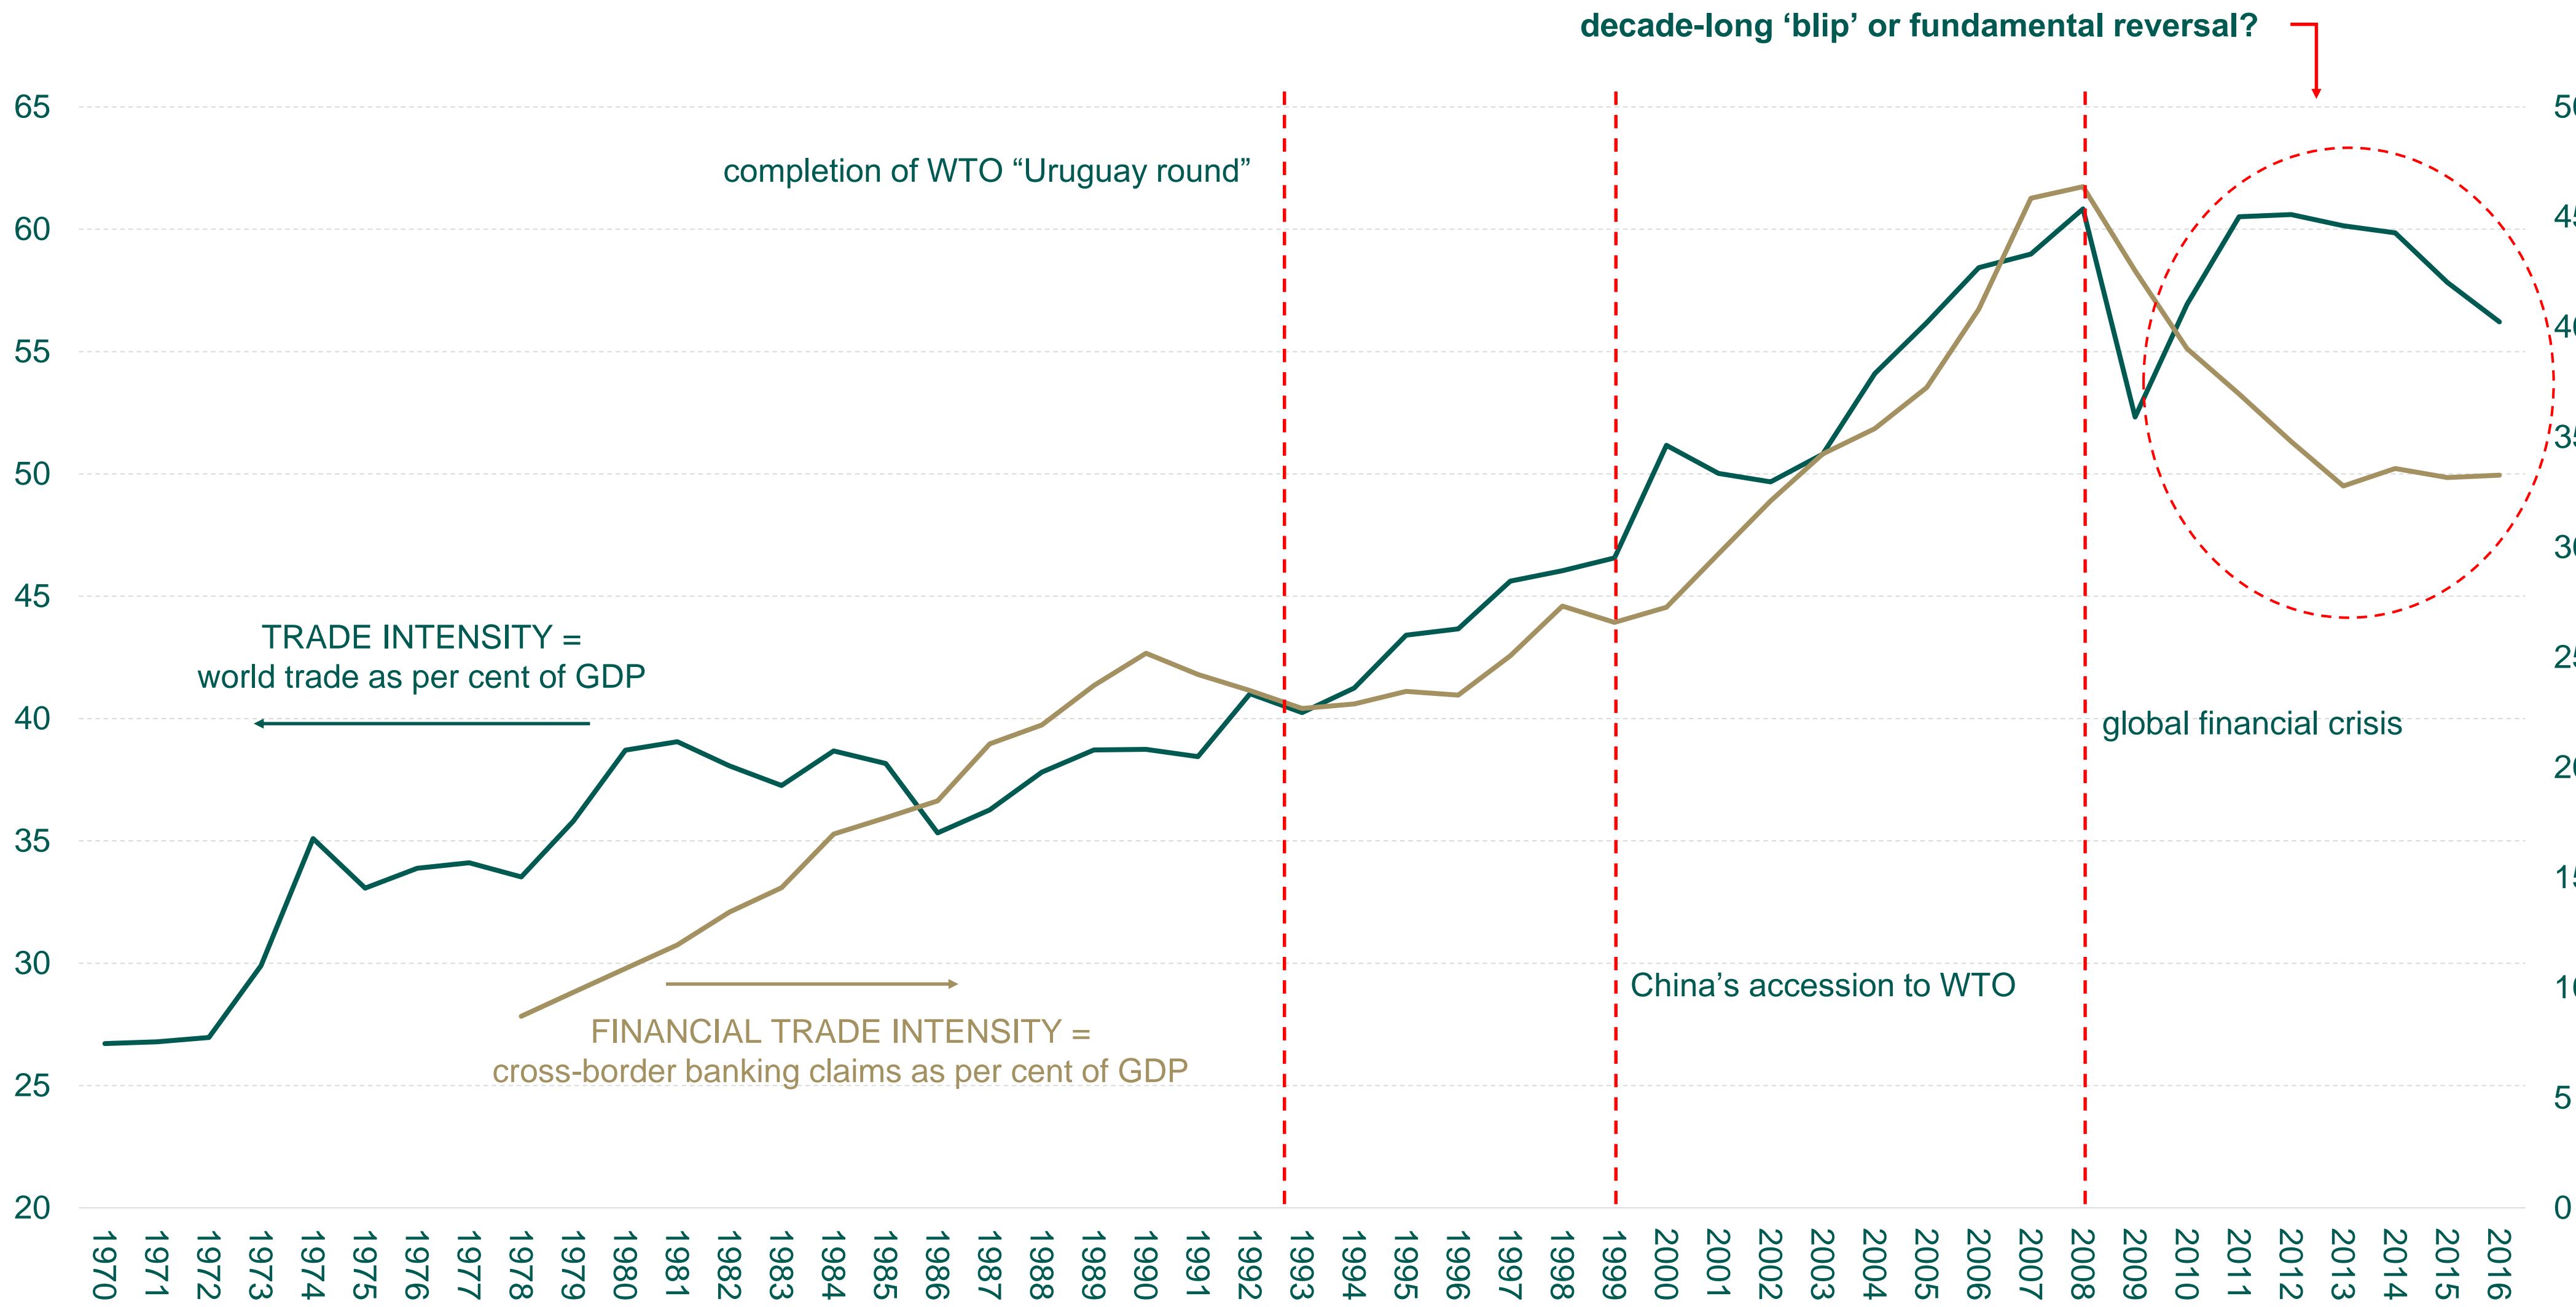

US: near-inversion of yield curve an omen?

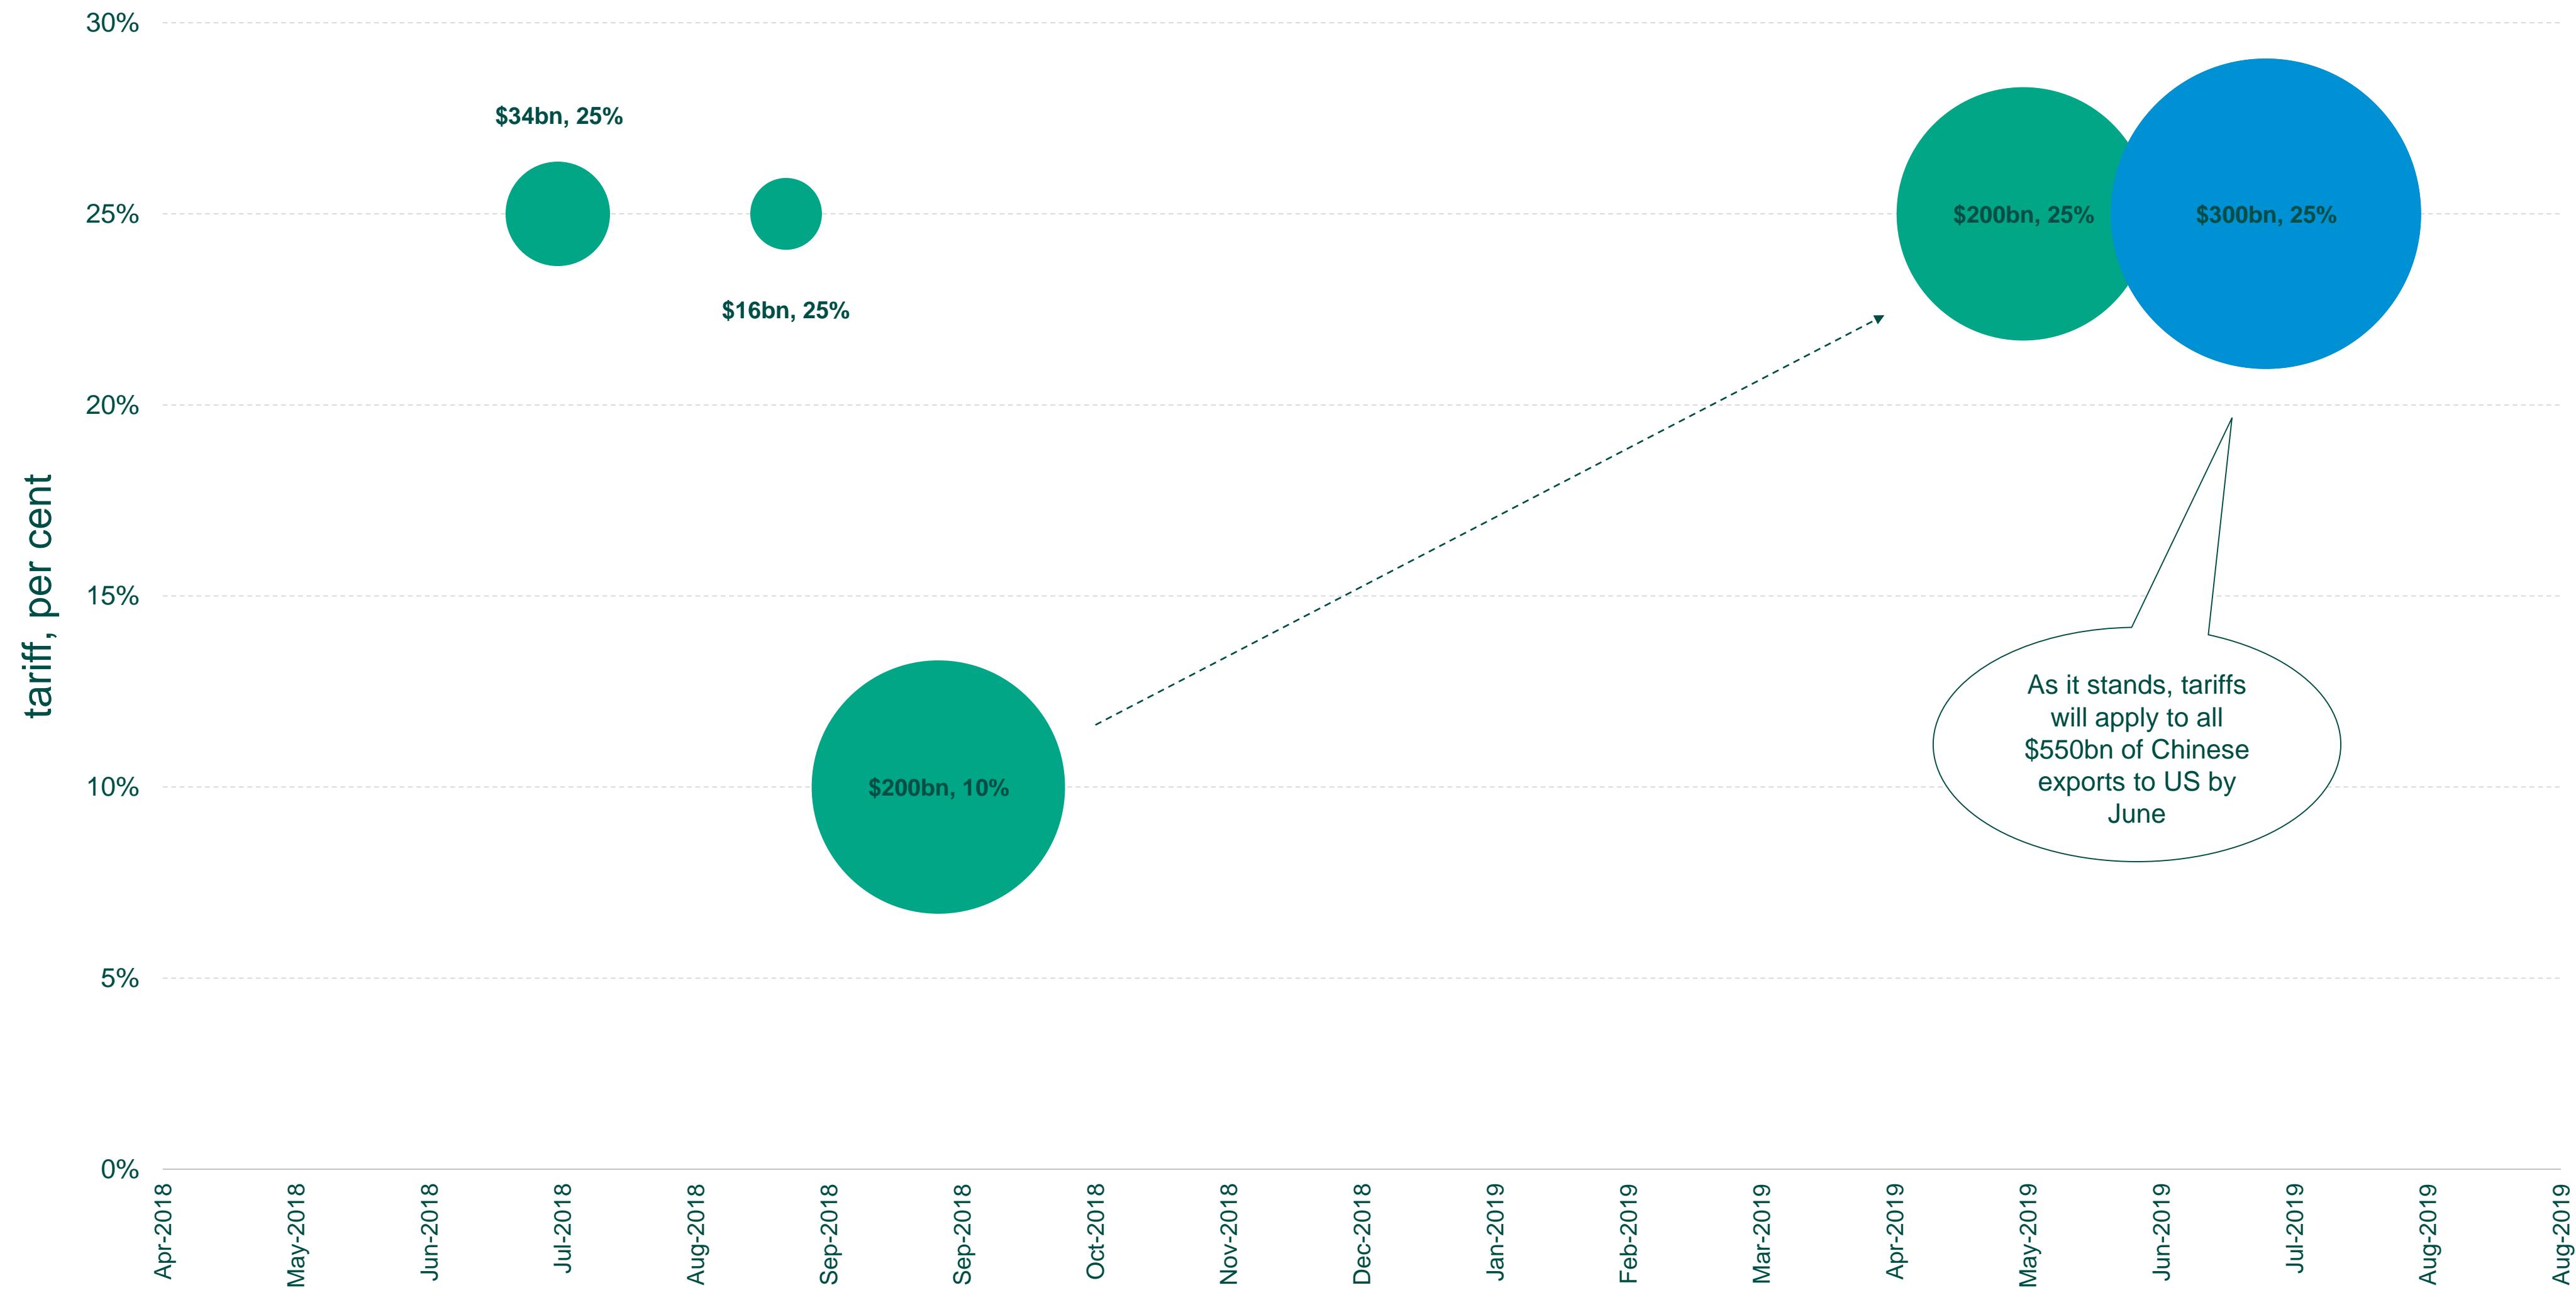

China: vulnerabilities weighing on output

Let's not forget about structural factors - peak' globalisation?

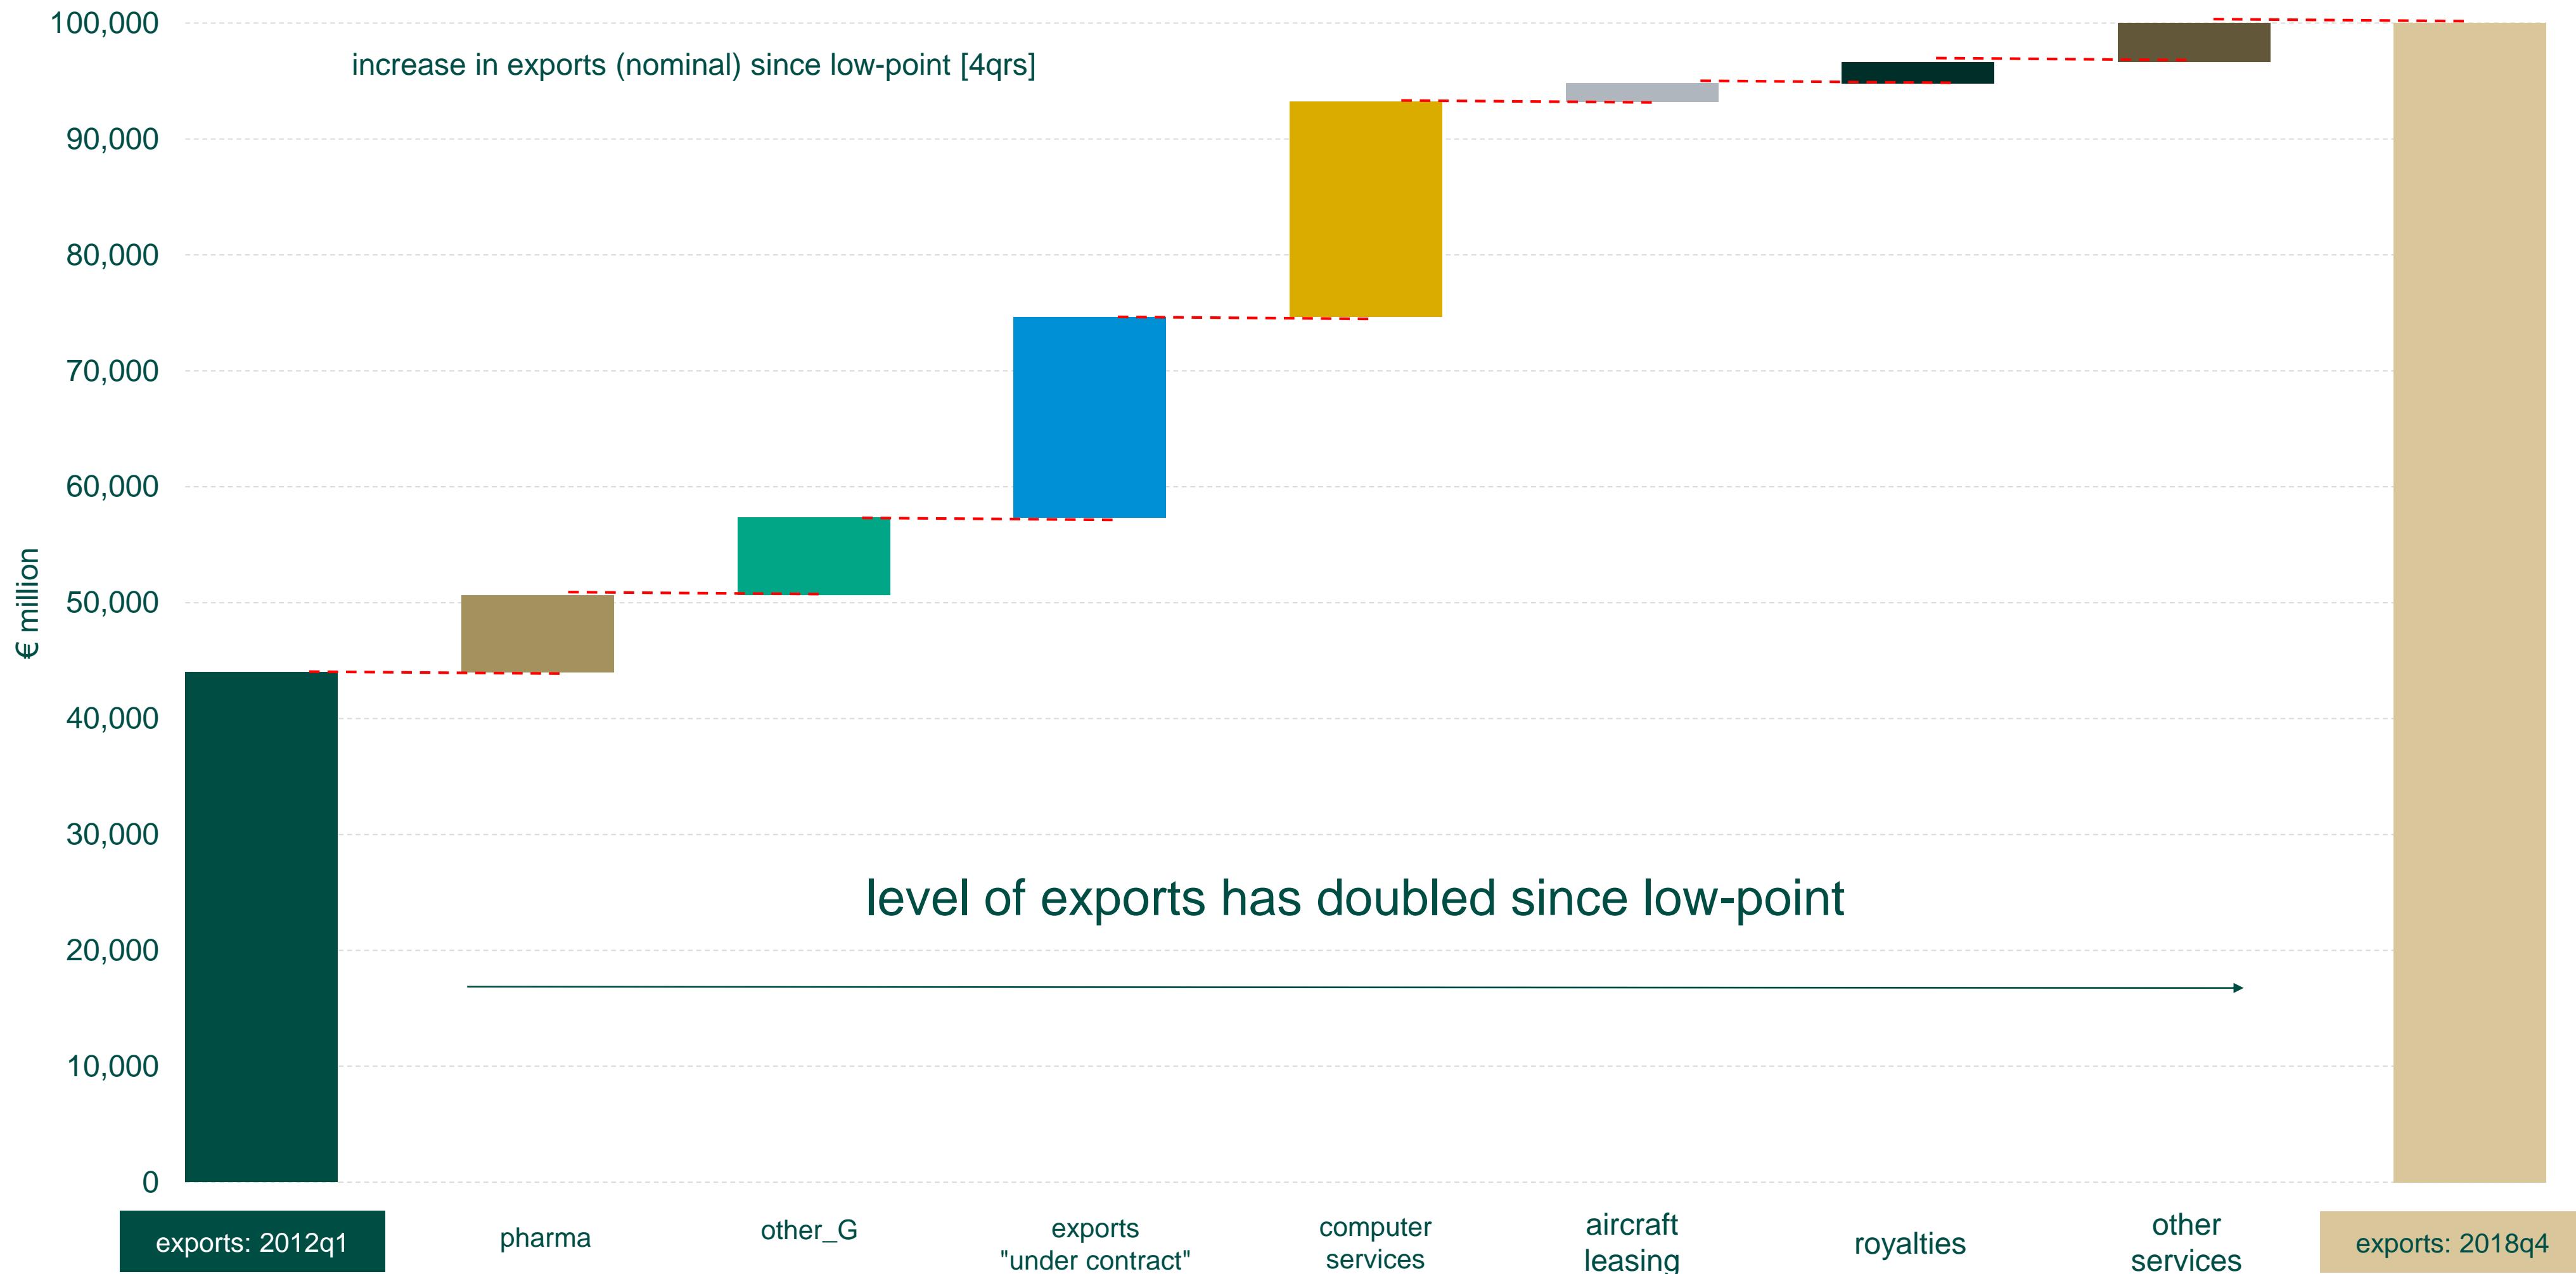

Import tariffs (and retaliatory measures) - $\frac{1}{2}$ pp off level of world GDP

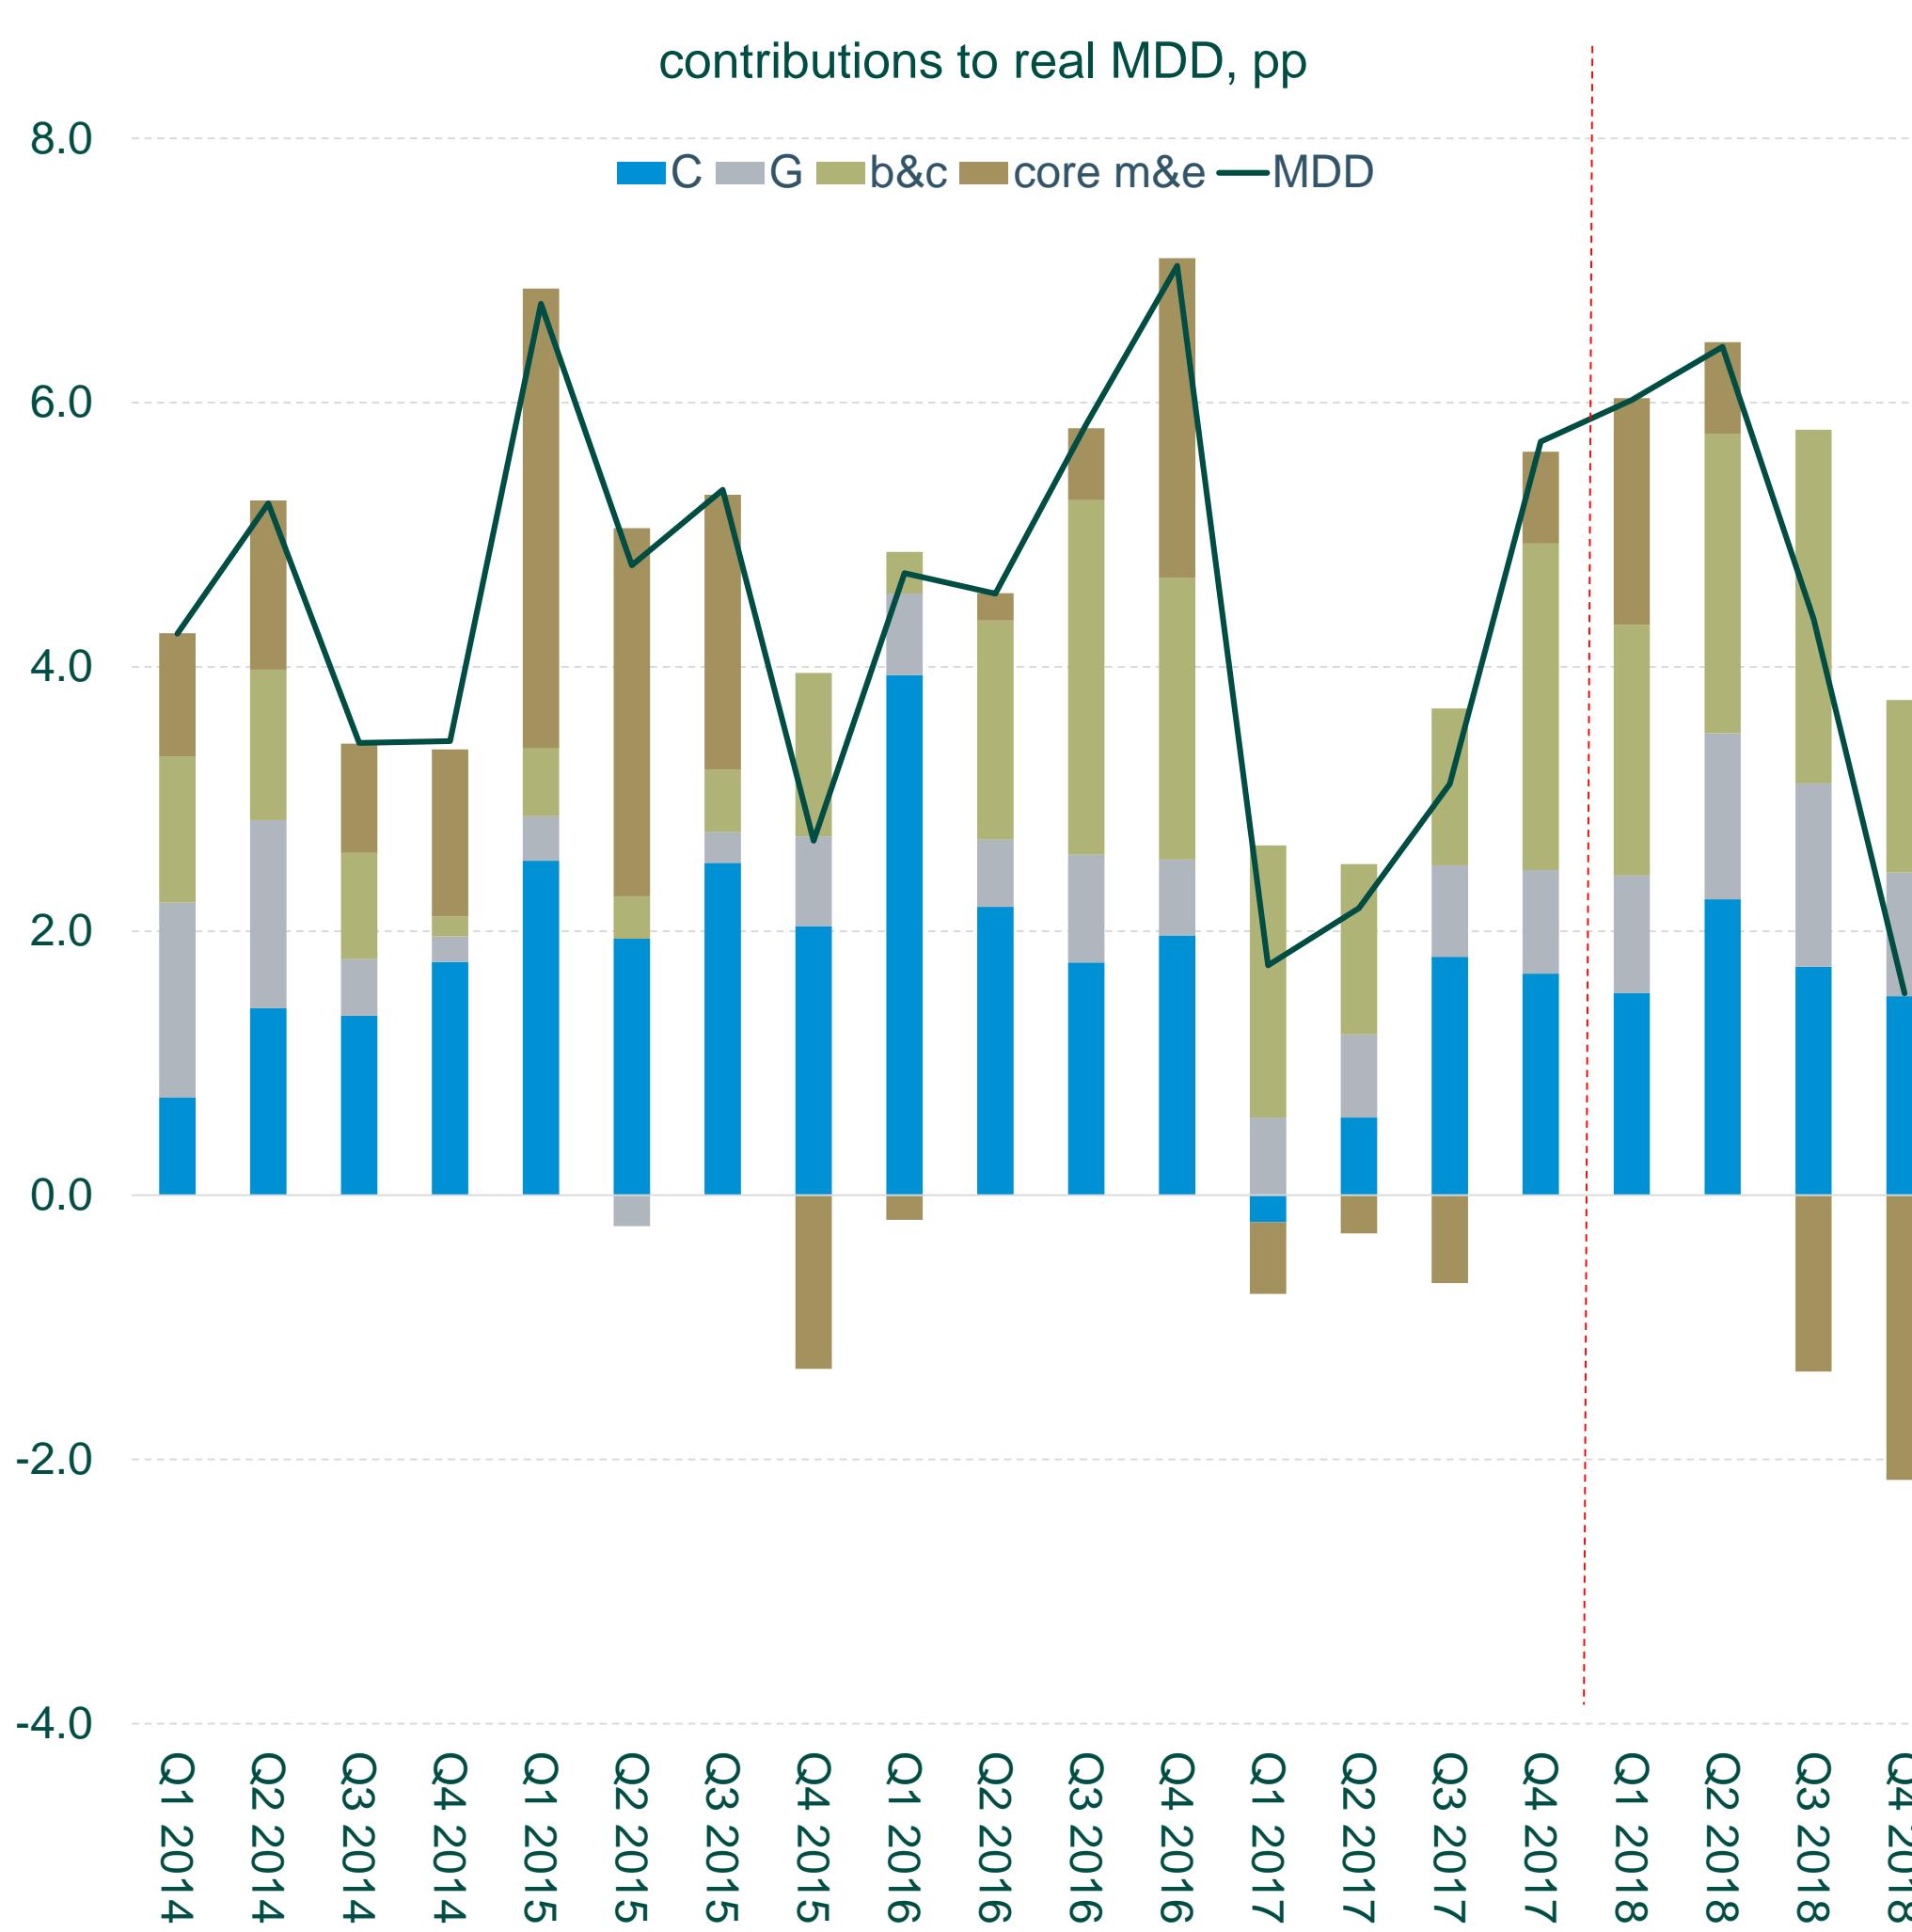

Latest macro-economic developments

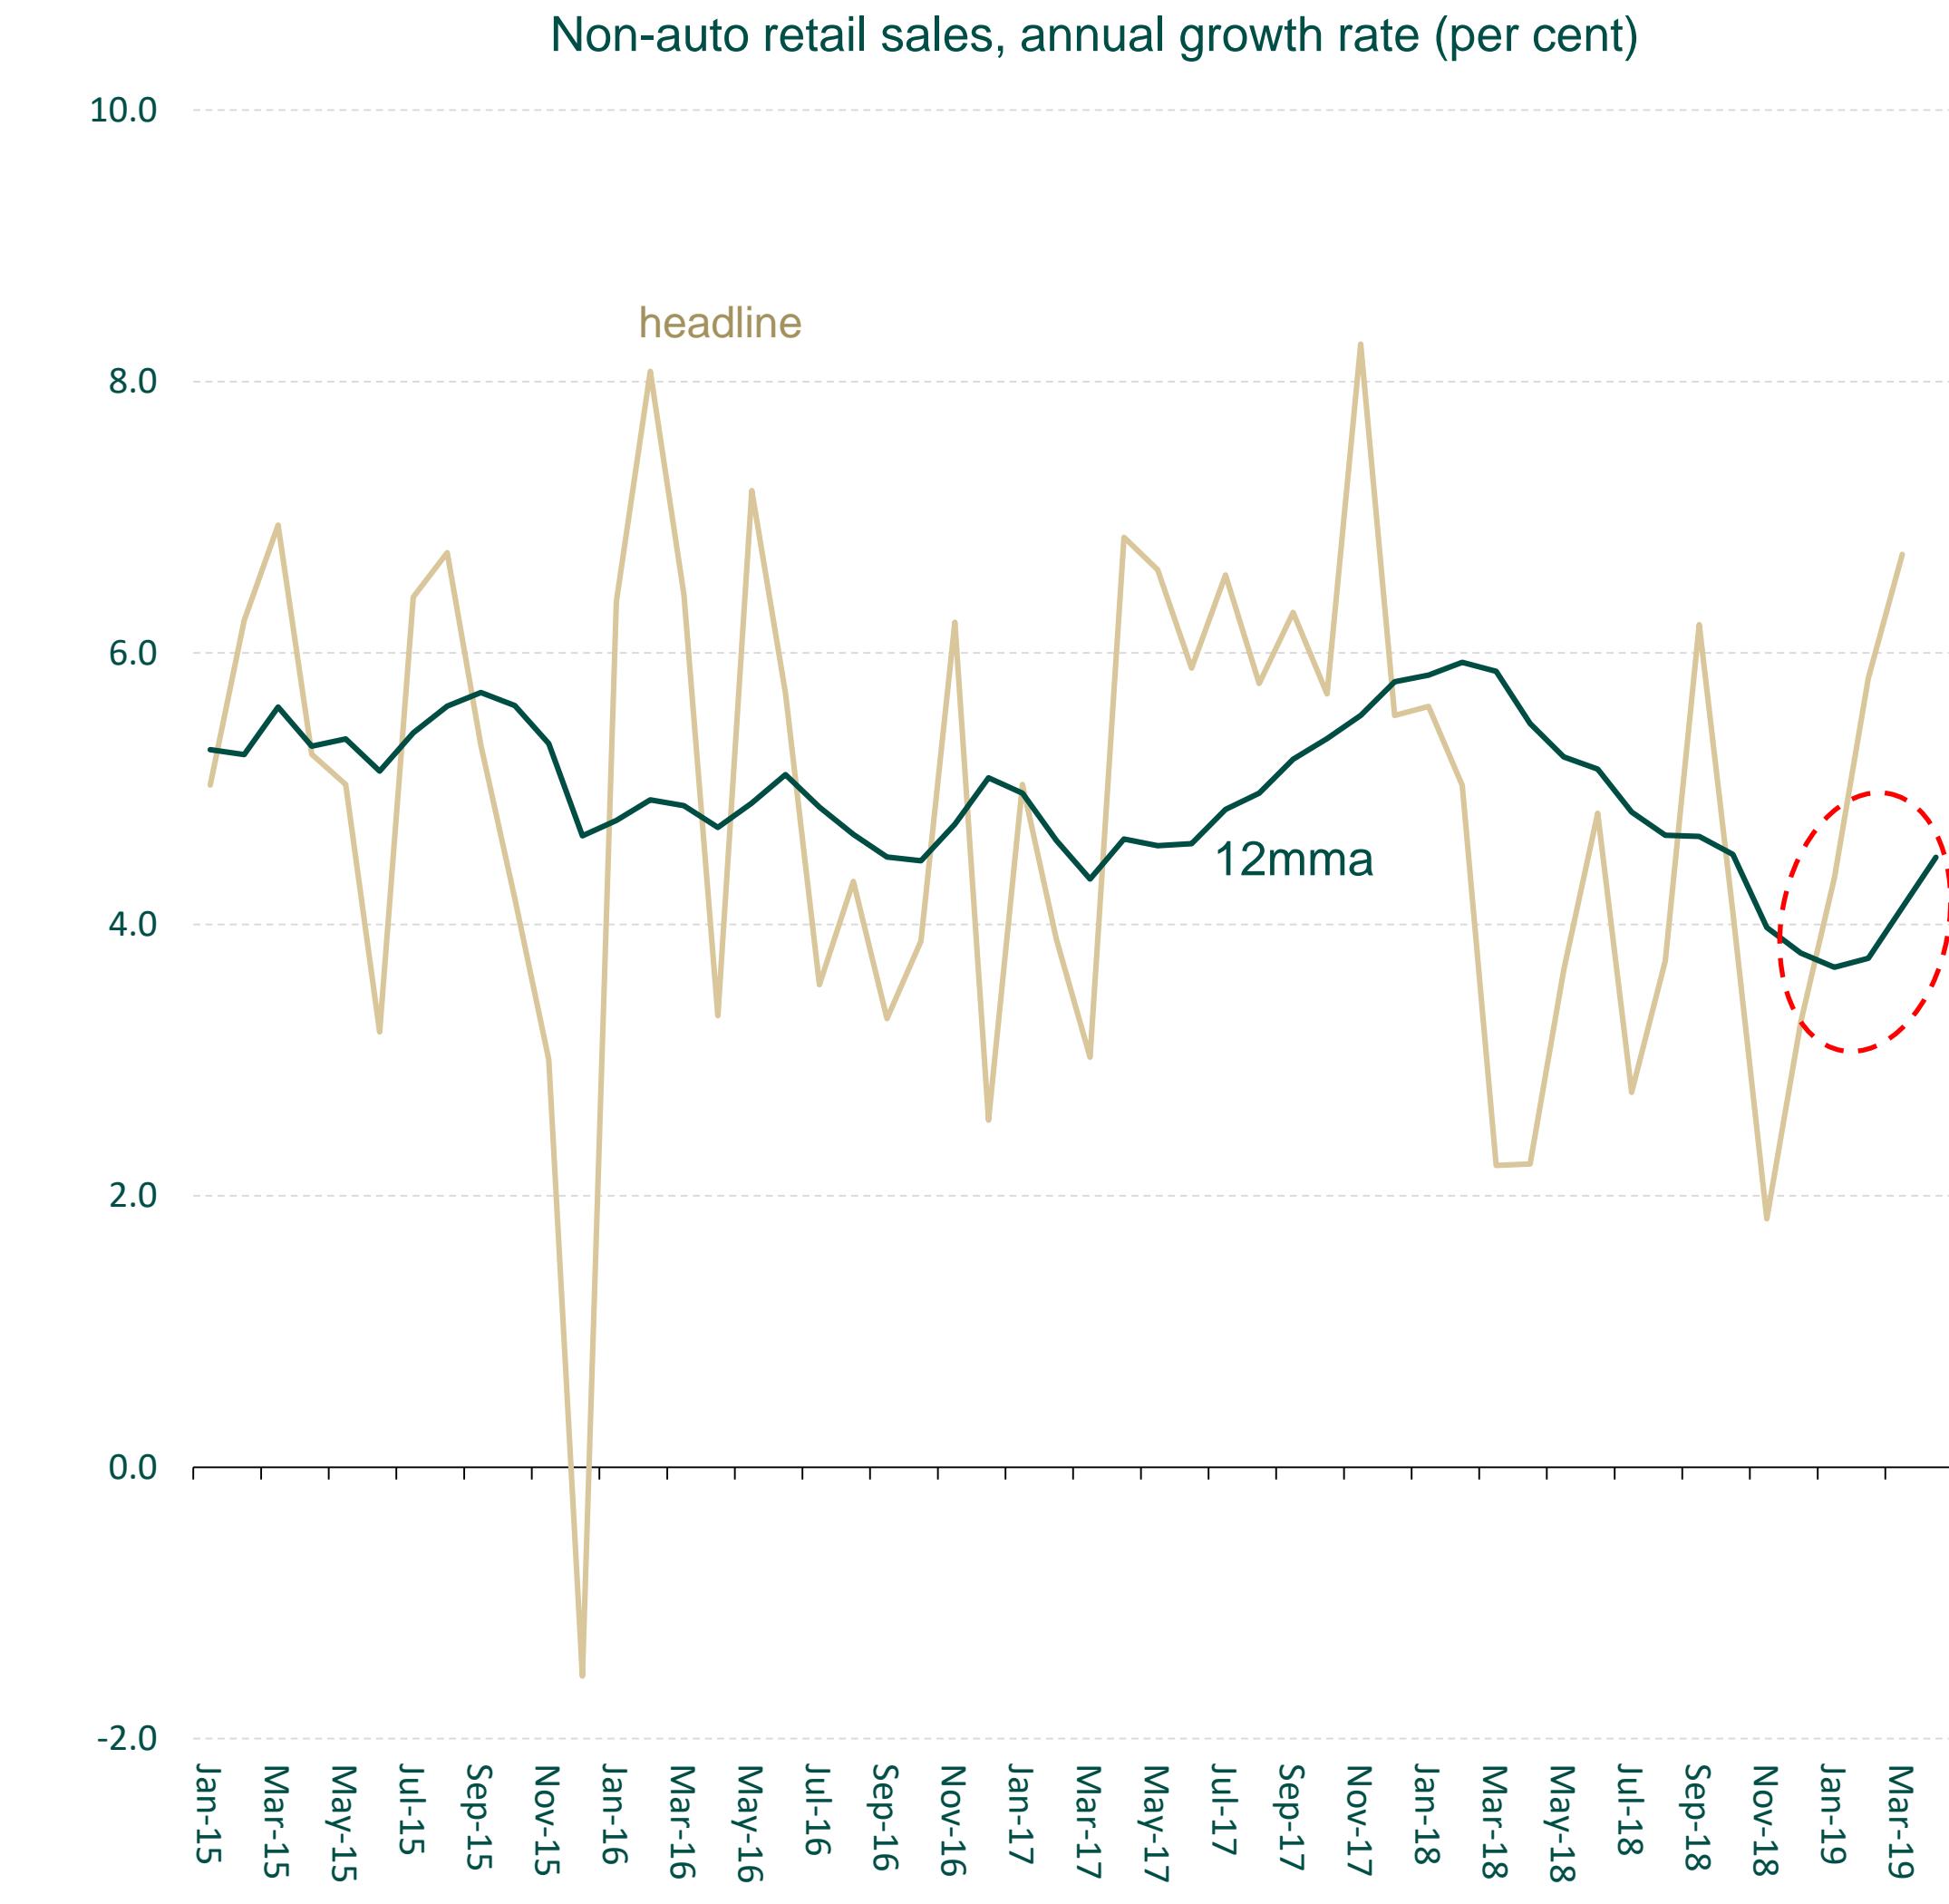

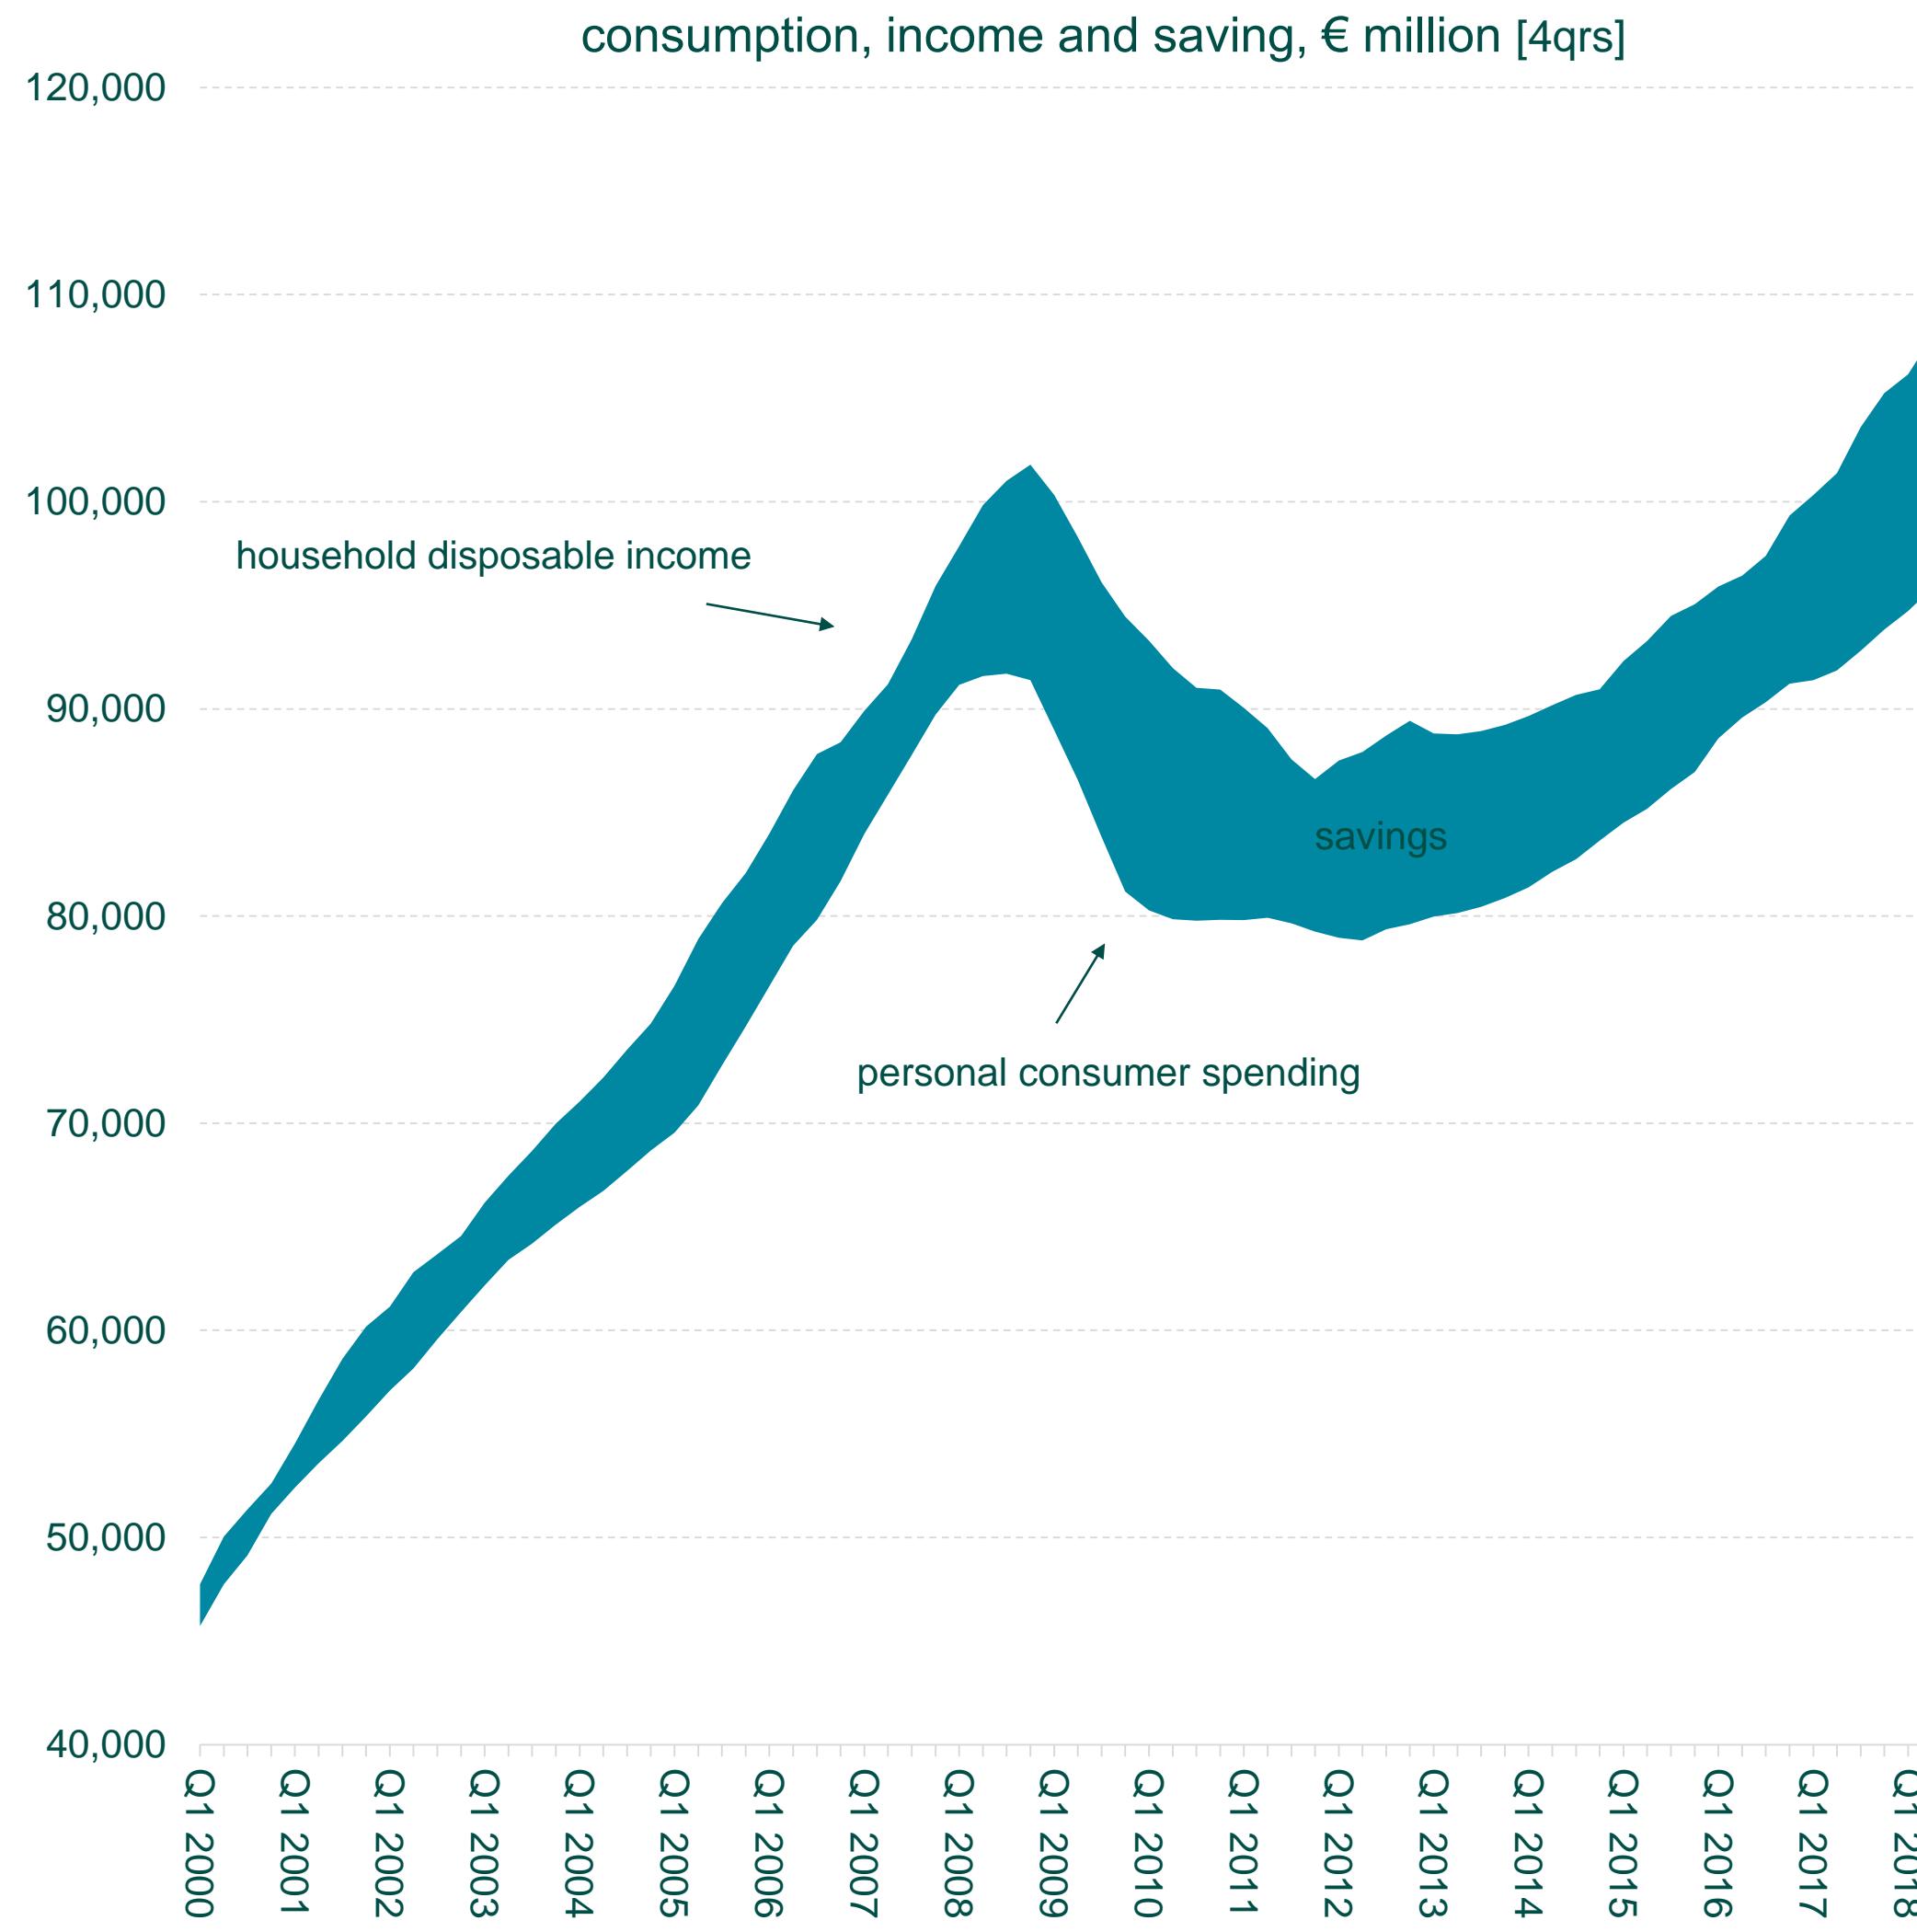

Exports continue to lead the way, less-so in labour-intensive sectors

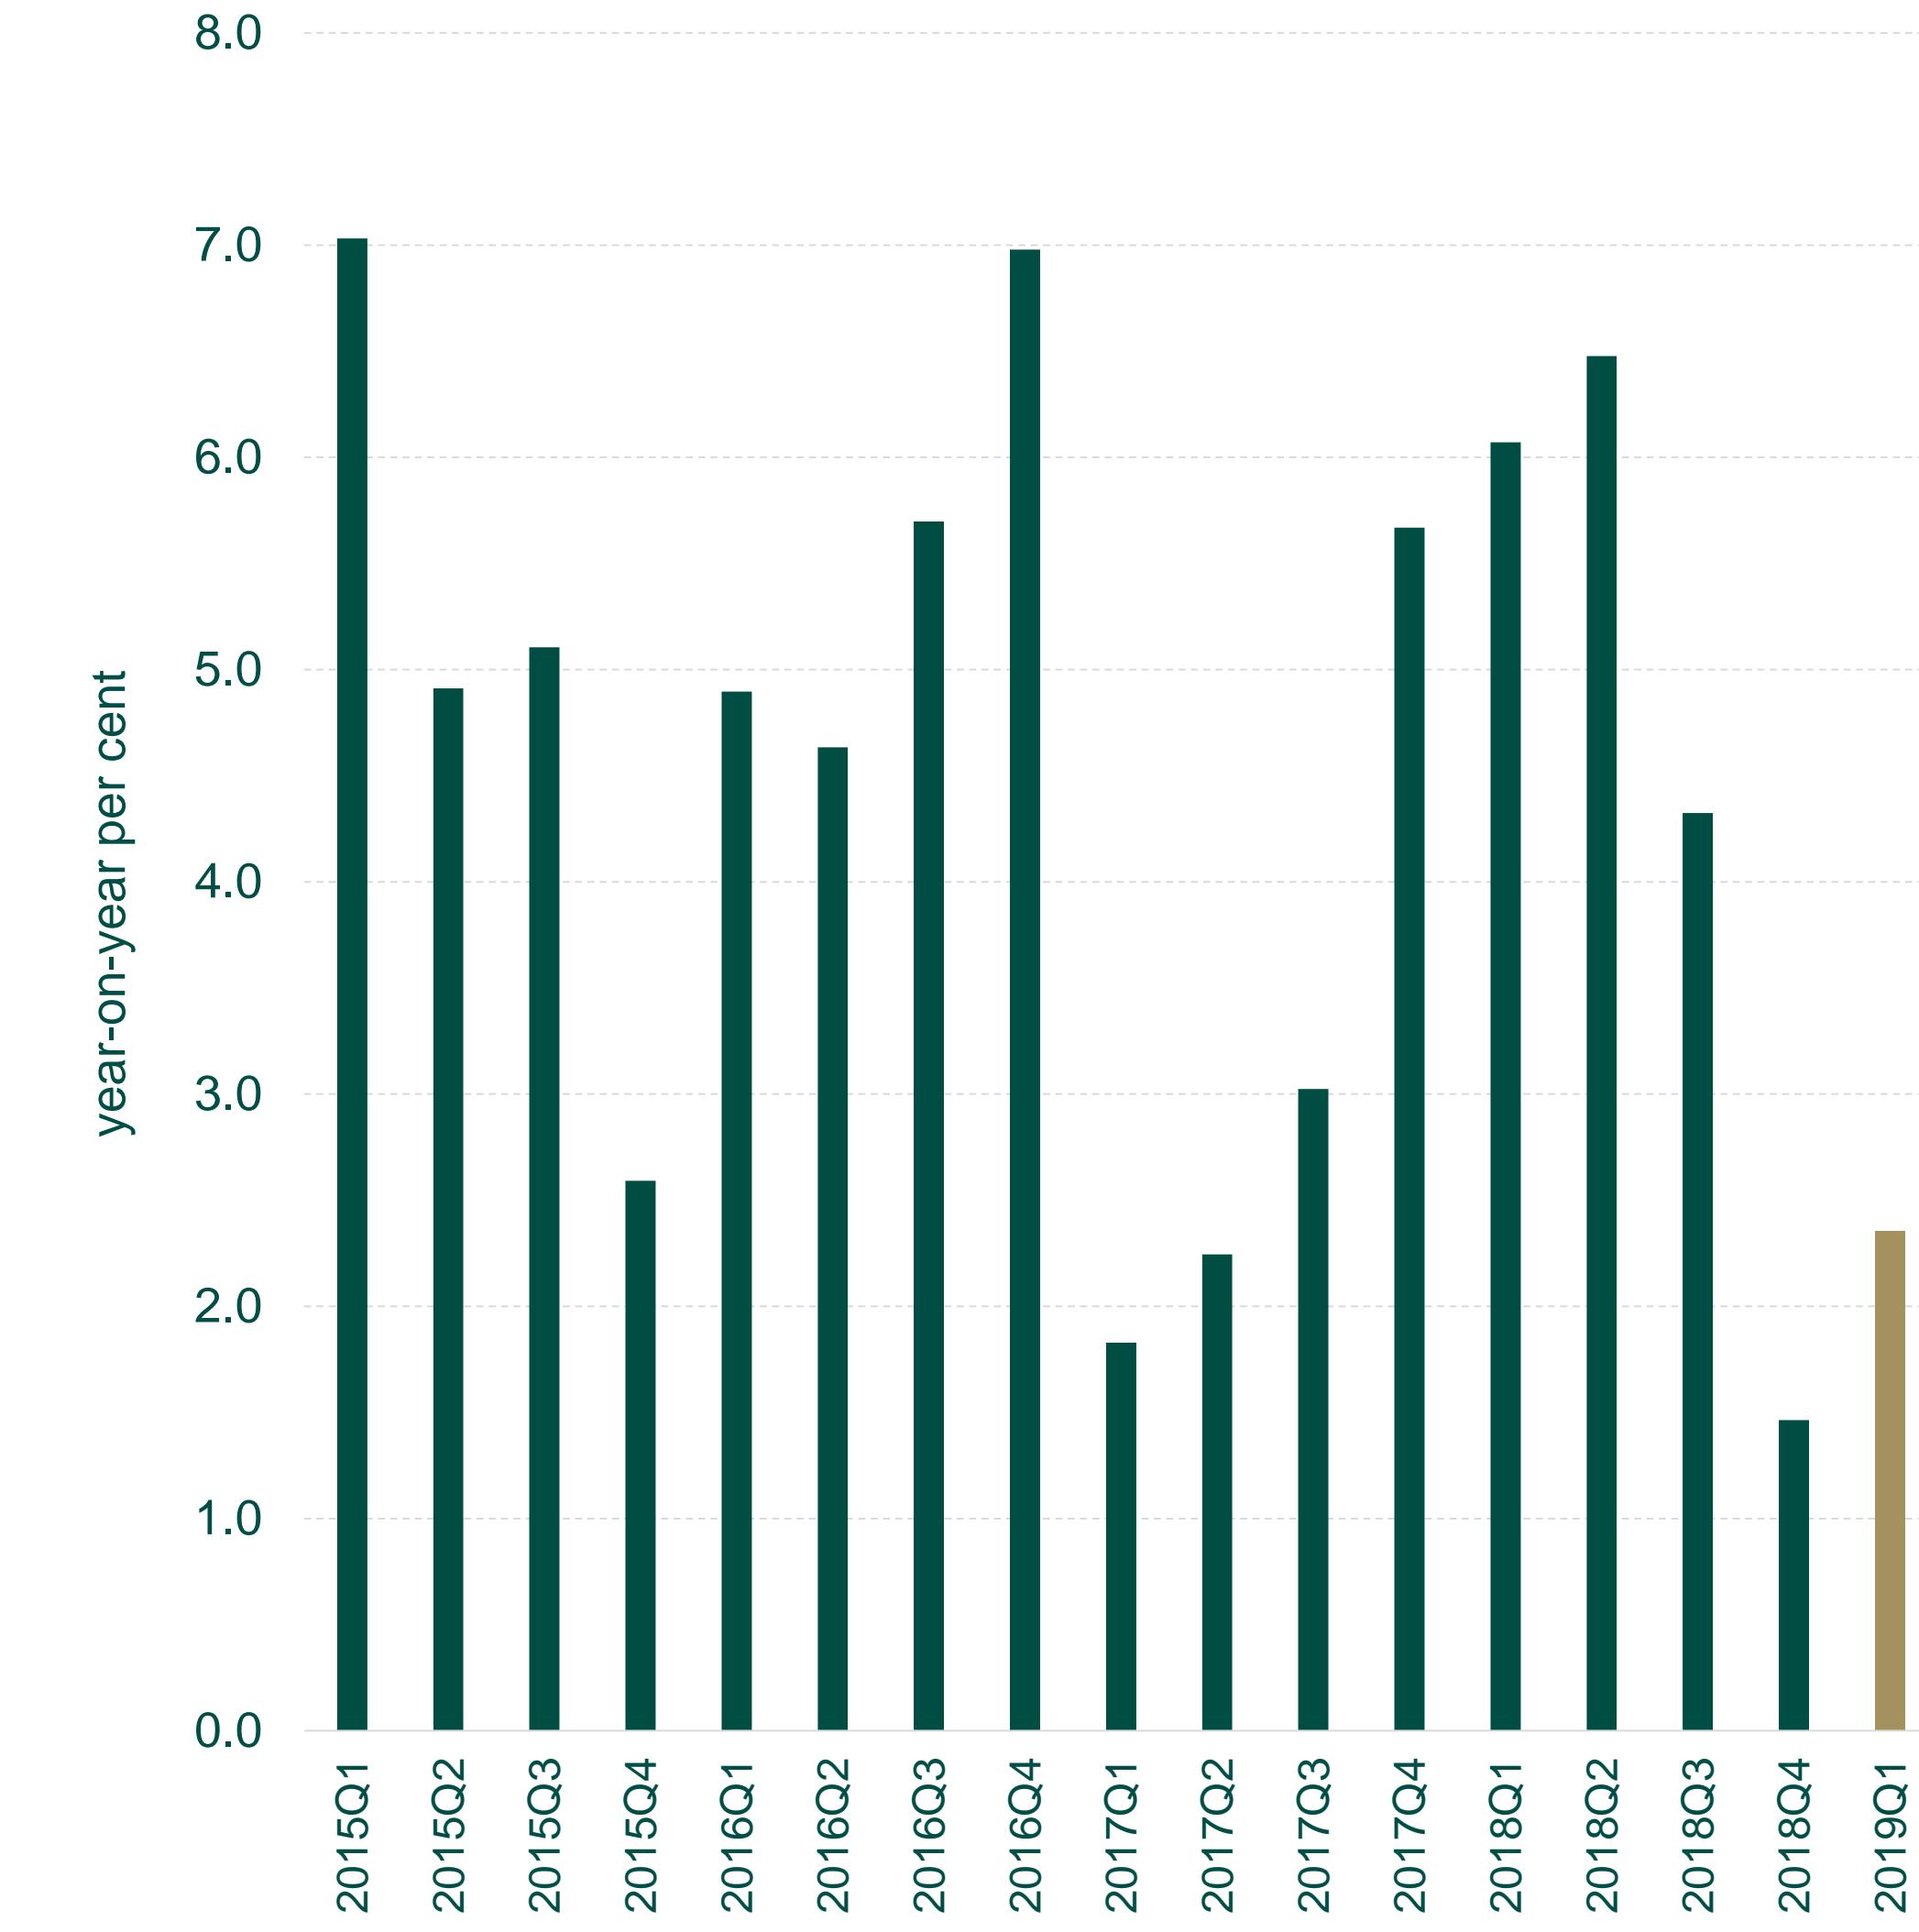

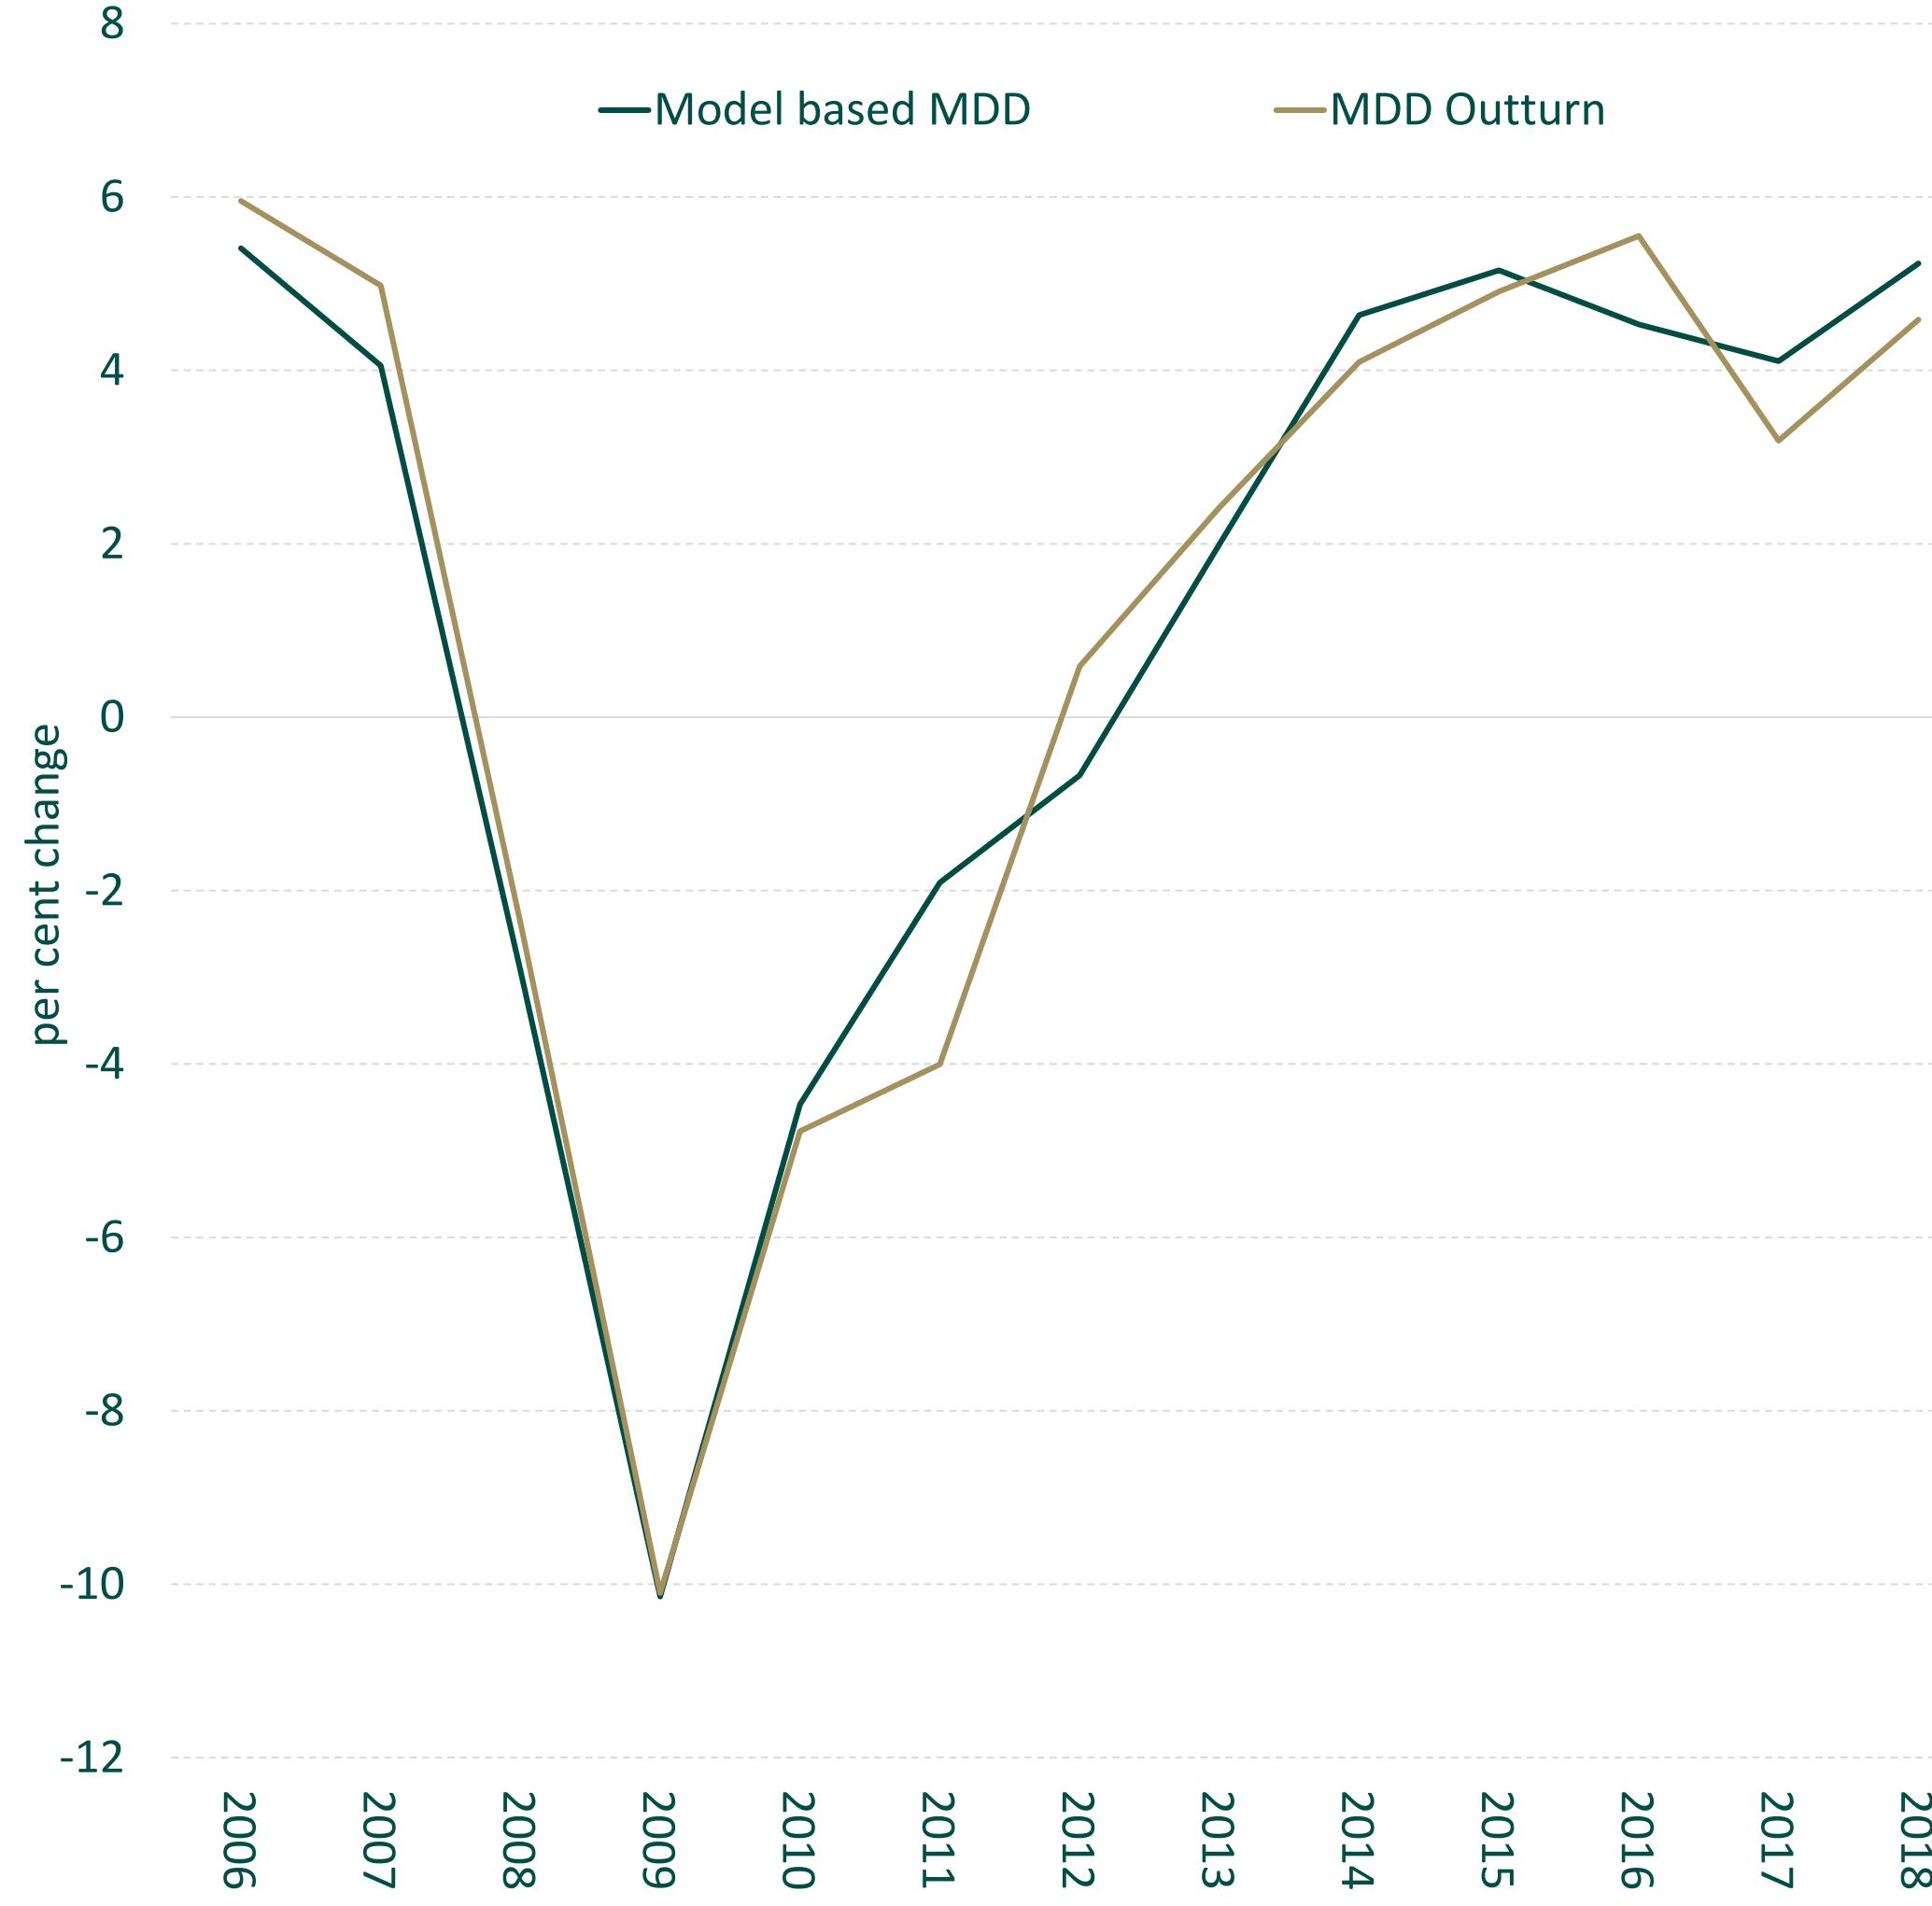

Low-frequency suggest moderation in H2/18 – higher frequency mixed bag

increase in household savings rate last year – some reversal in Q1

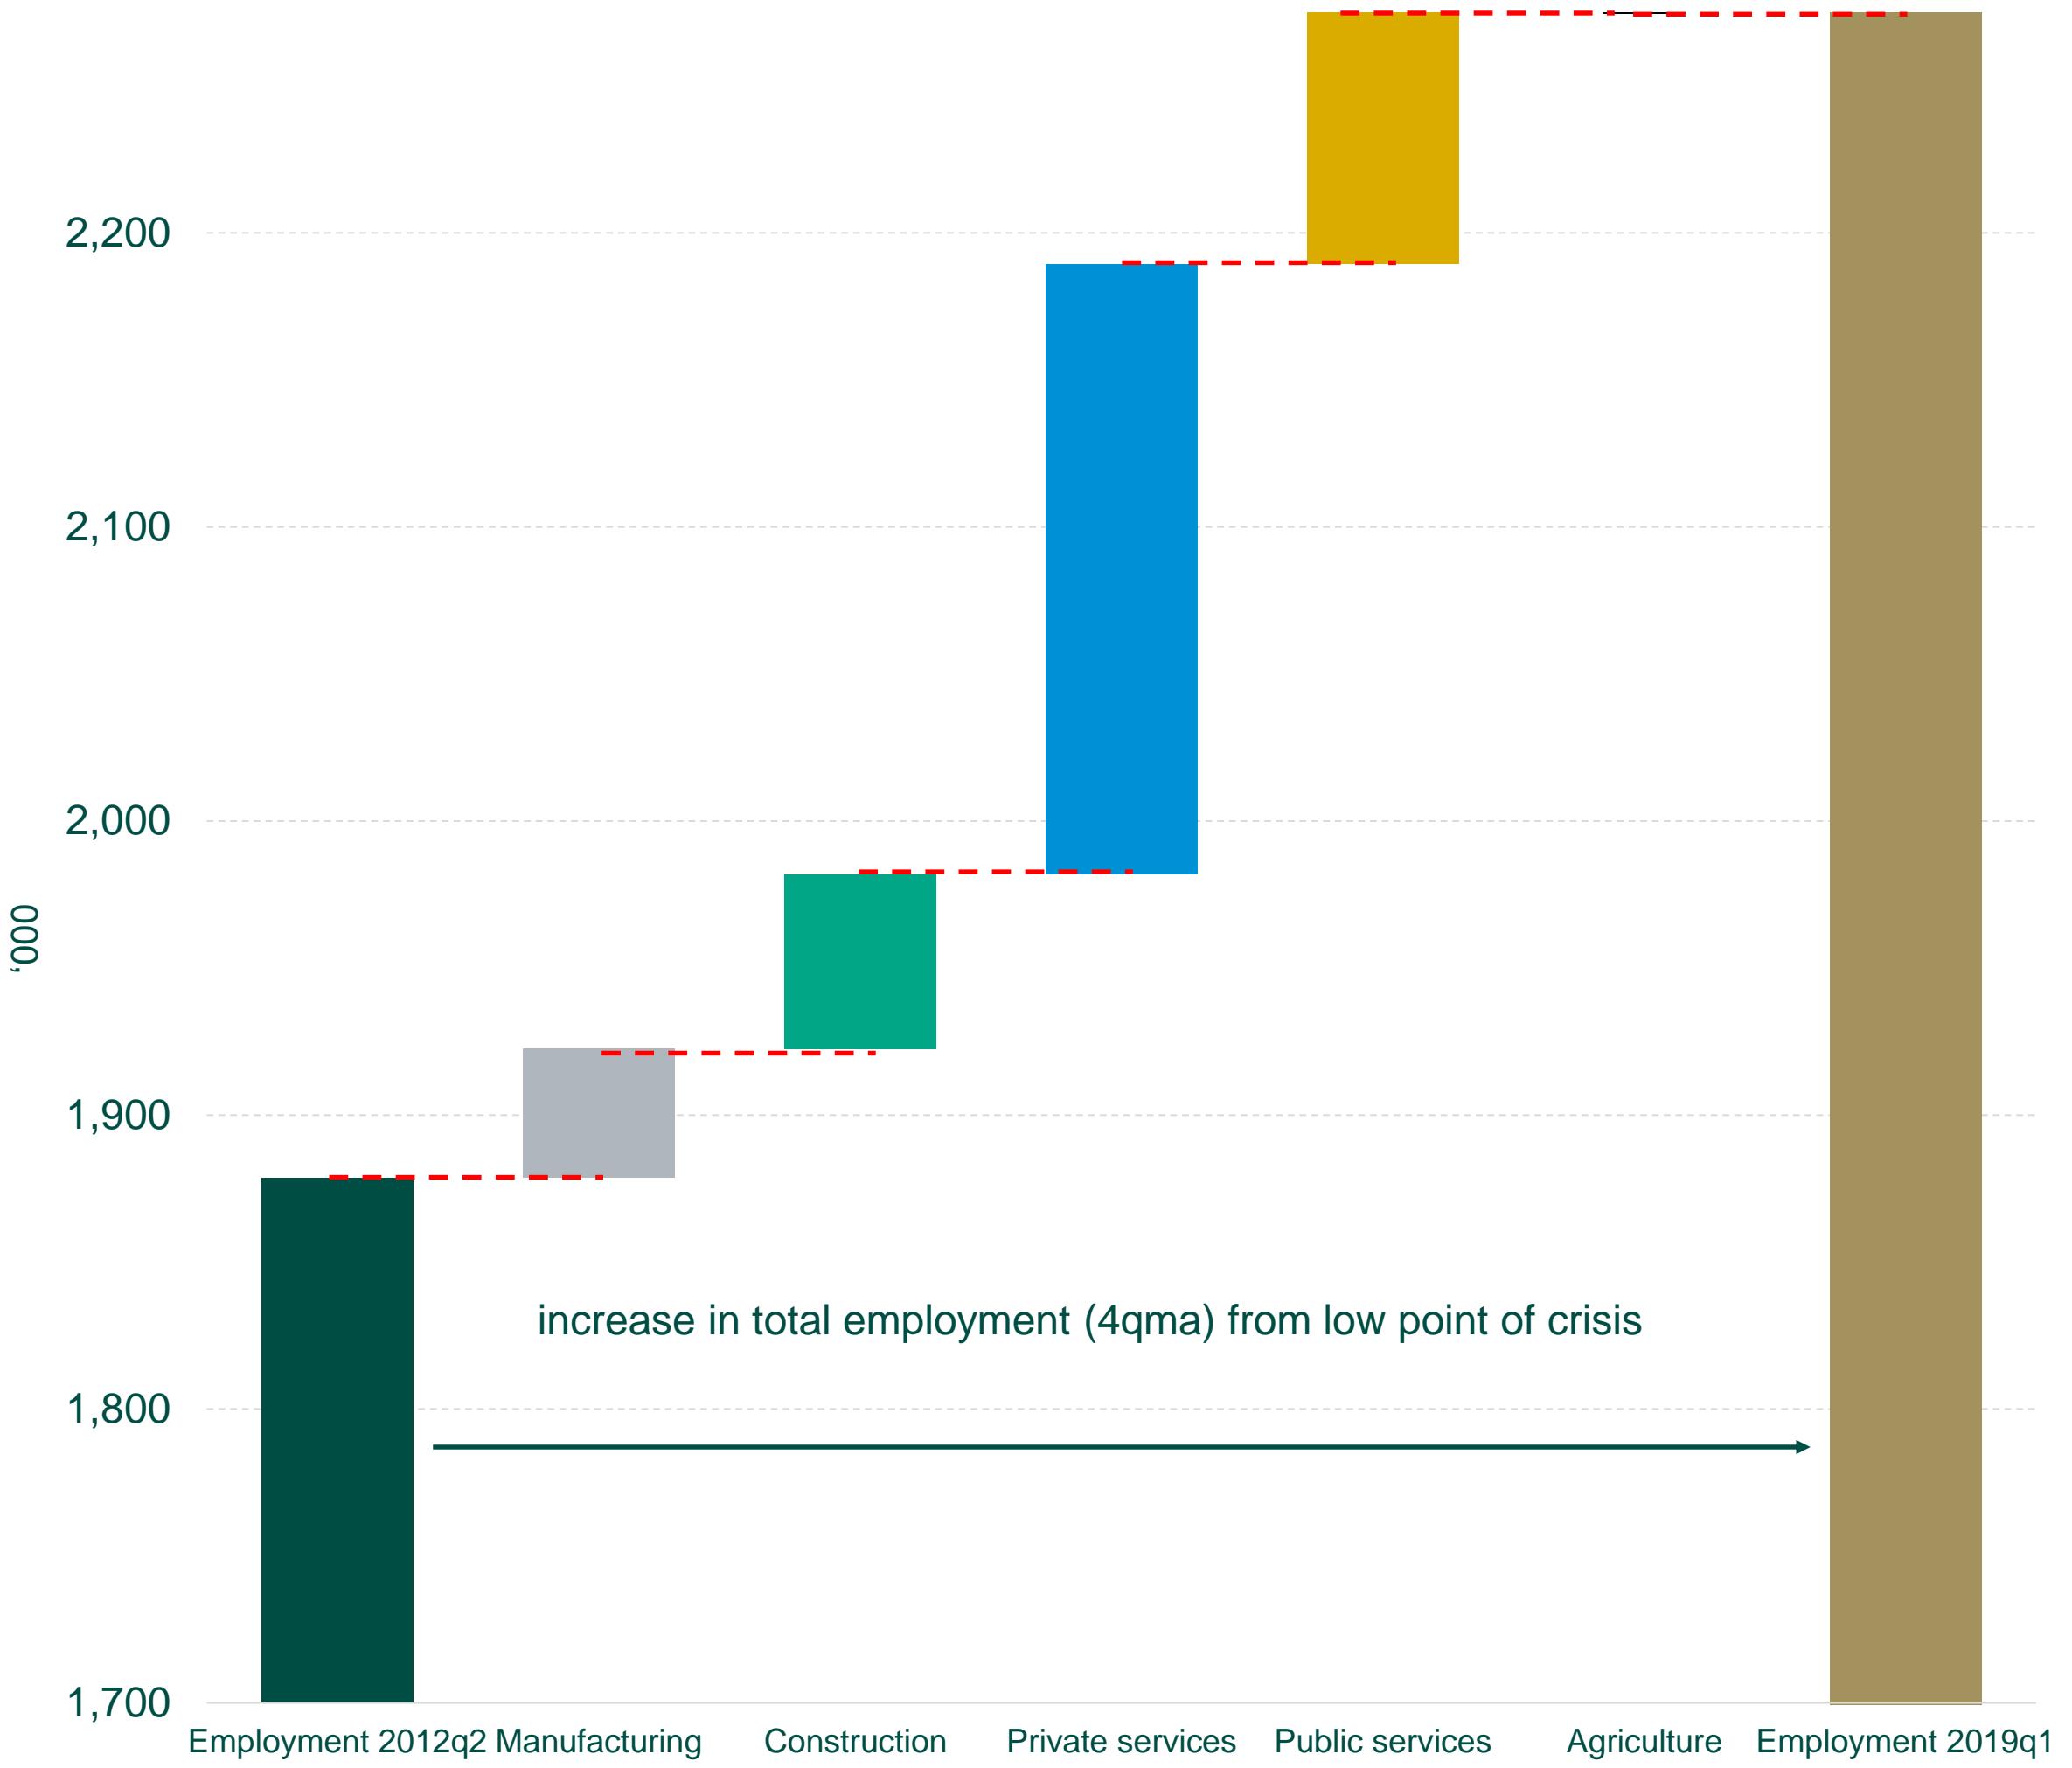

“now-casting” modified domestic demand – principal component analysis

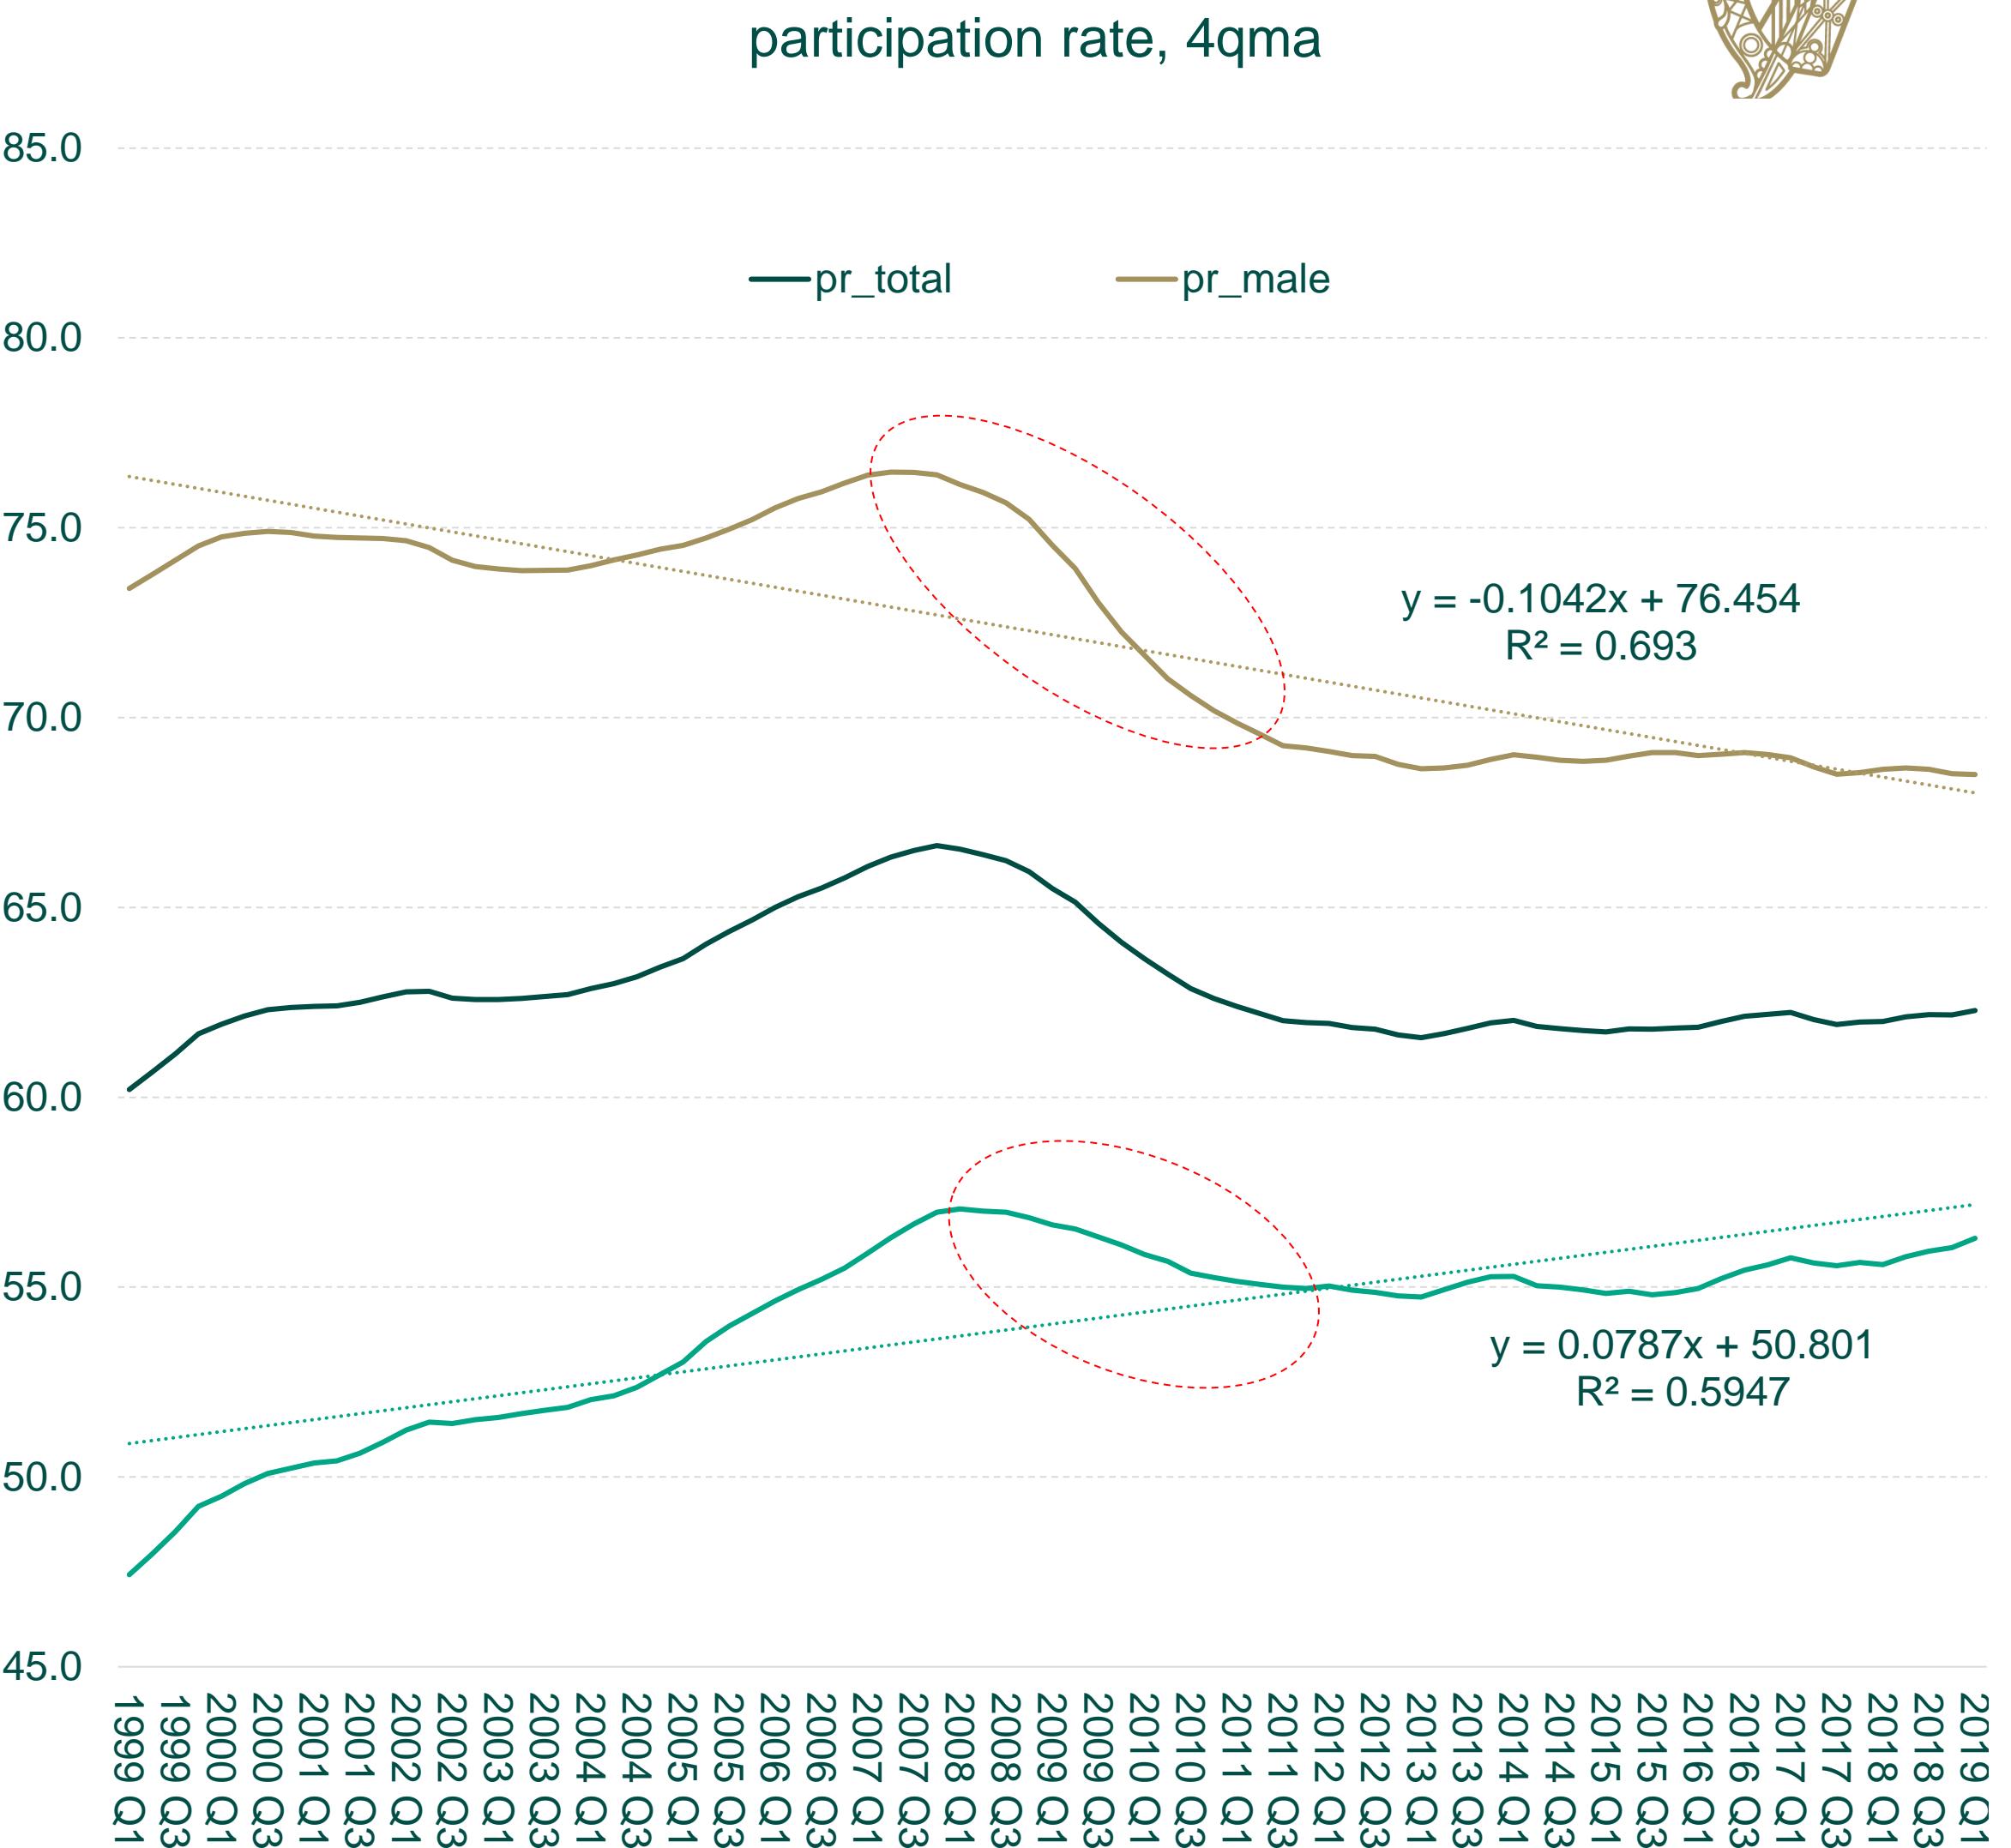

The labour market

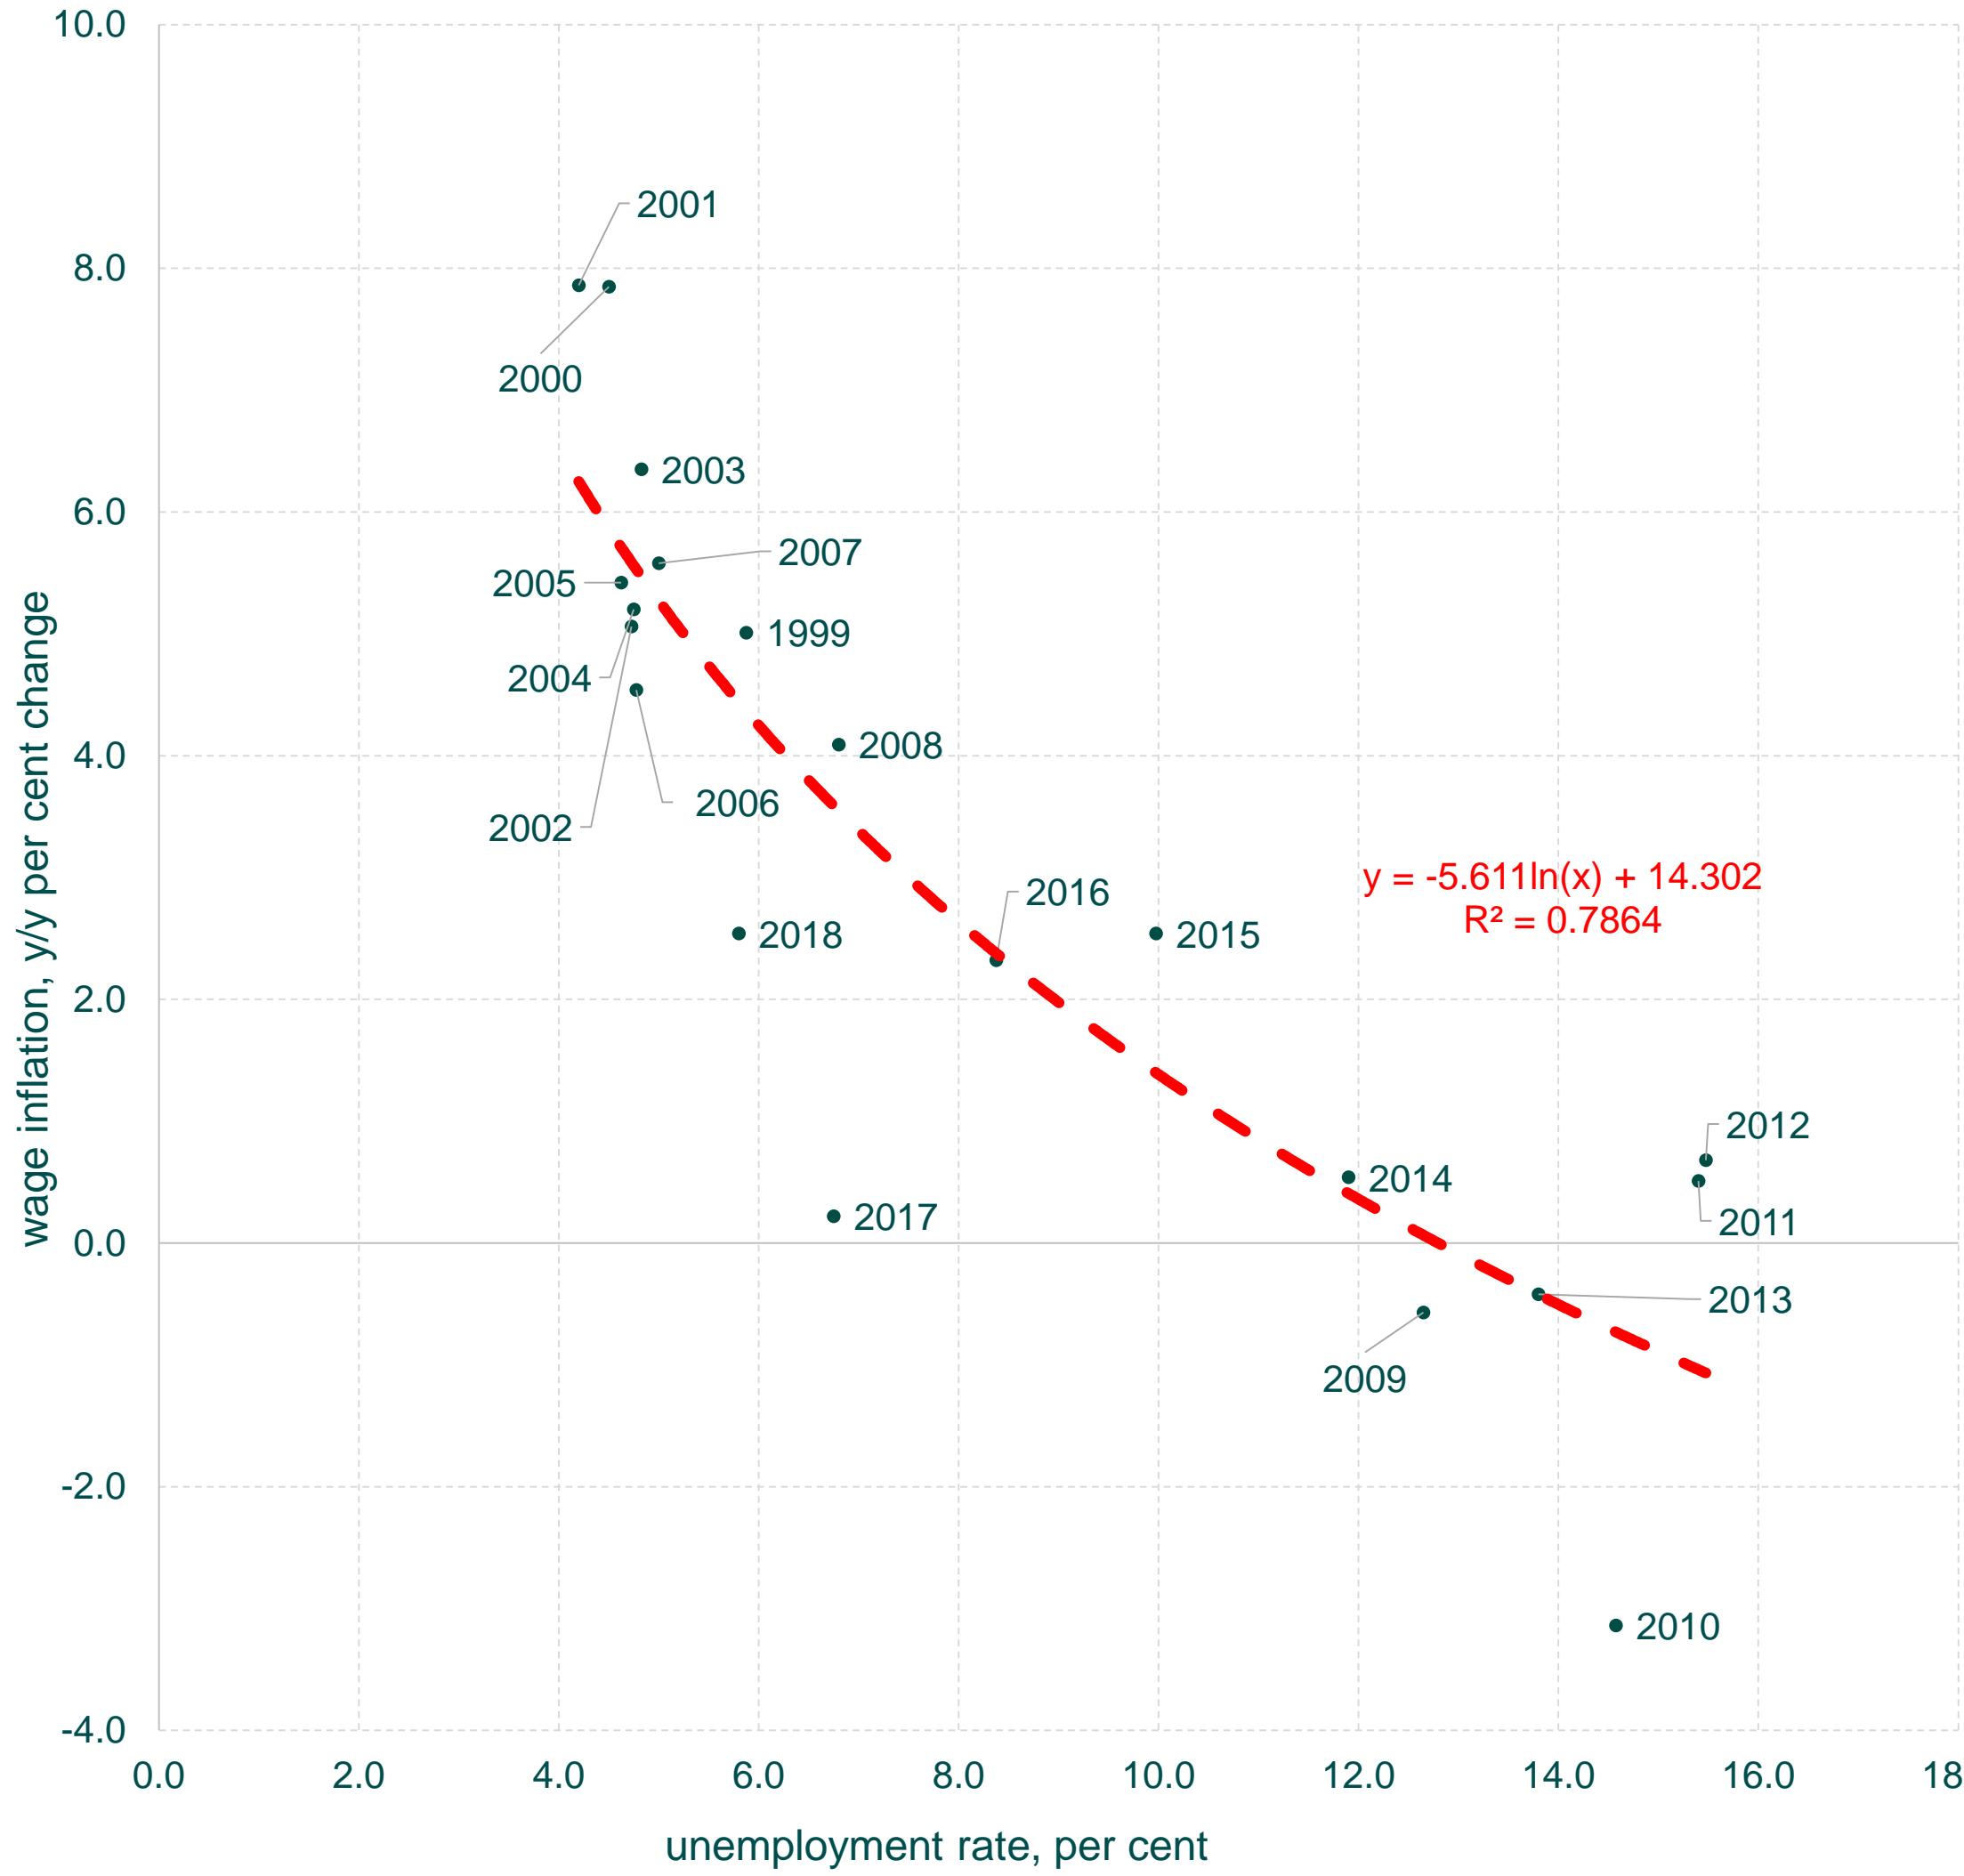

Employment surprise in Q1

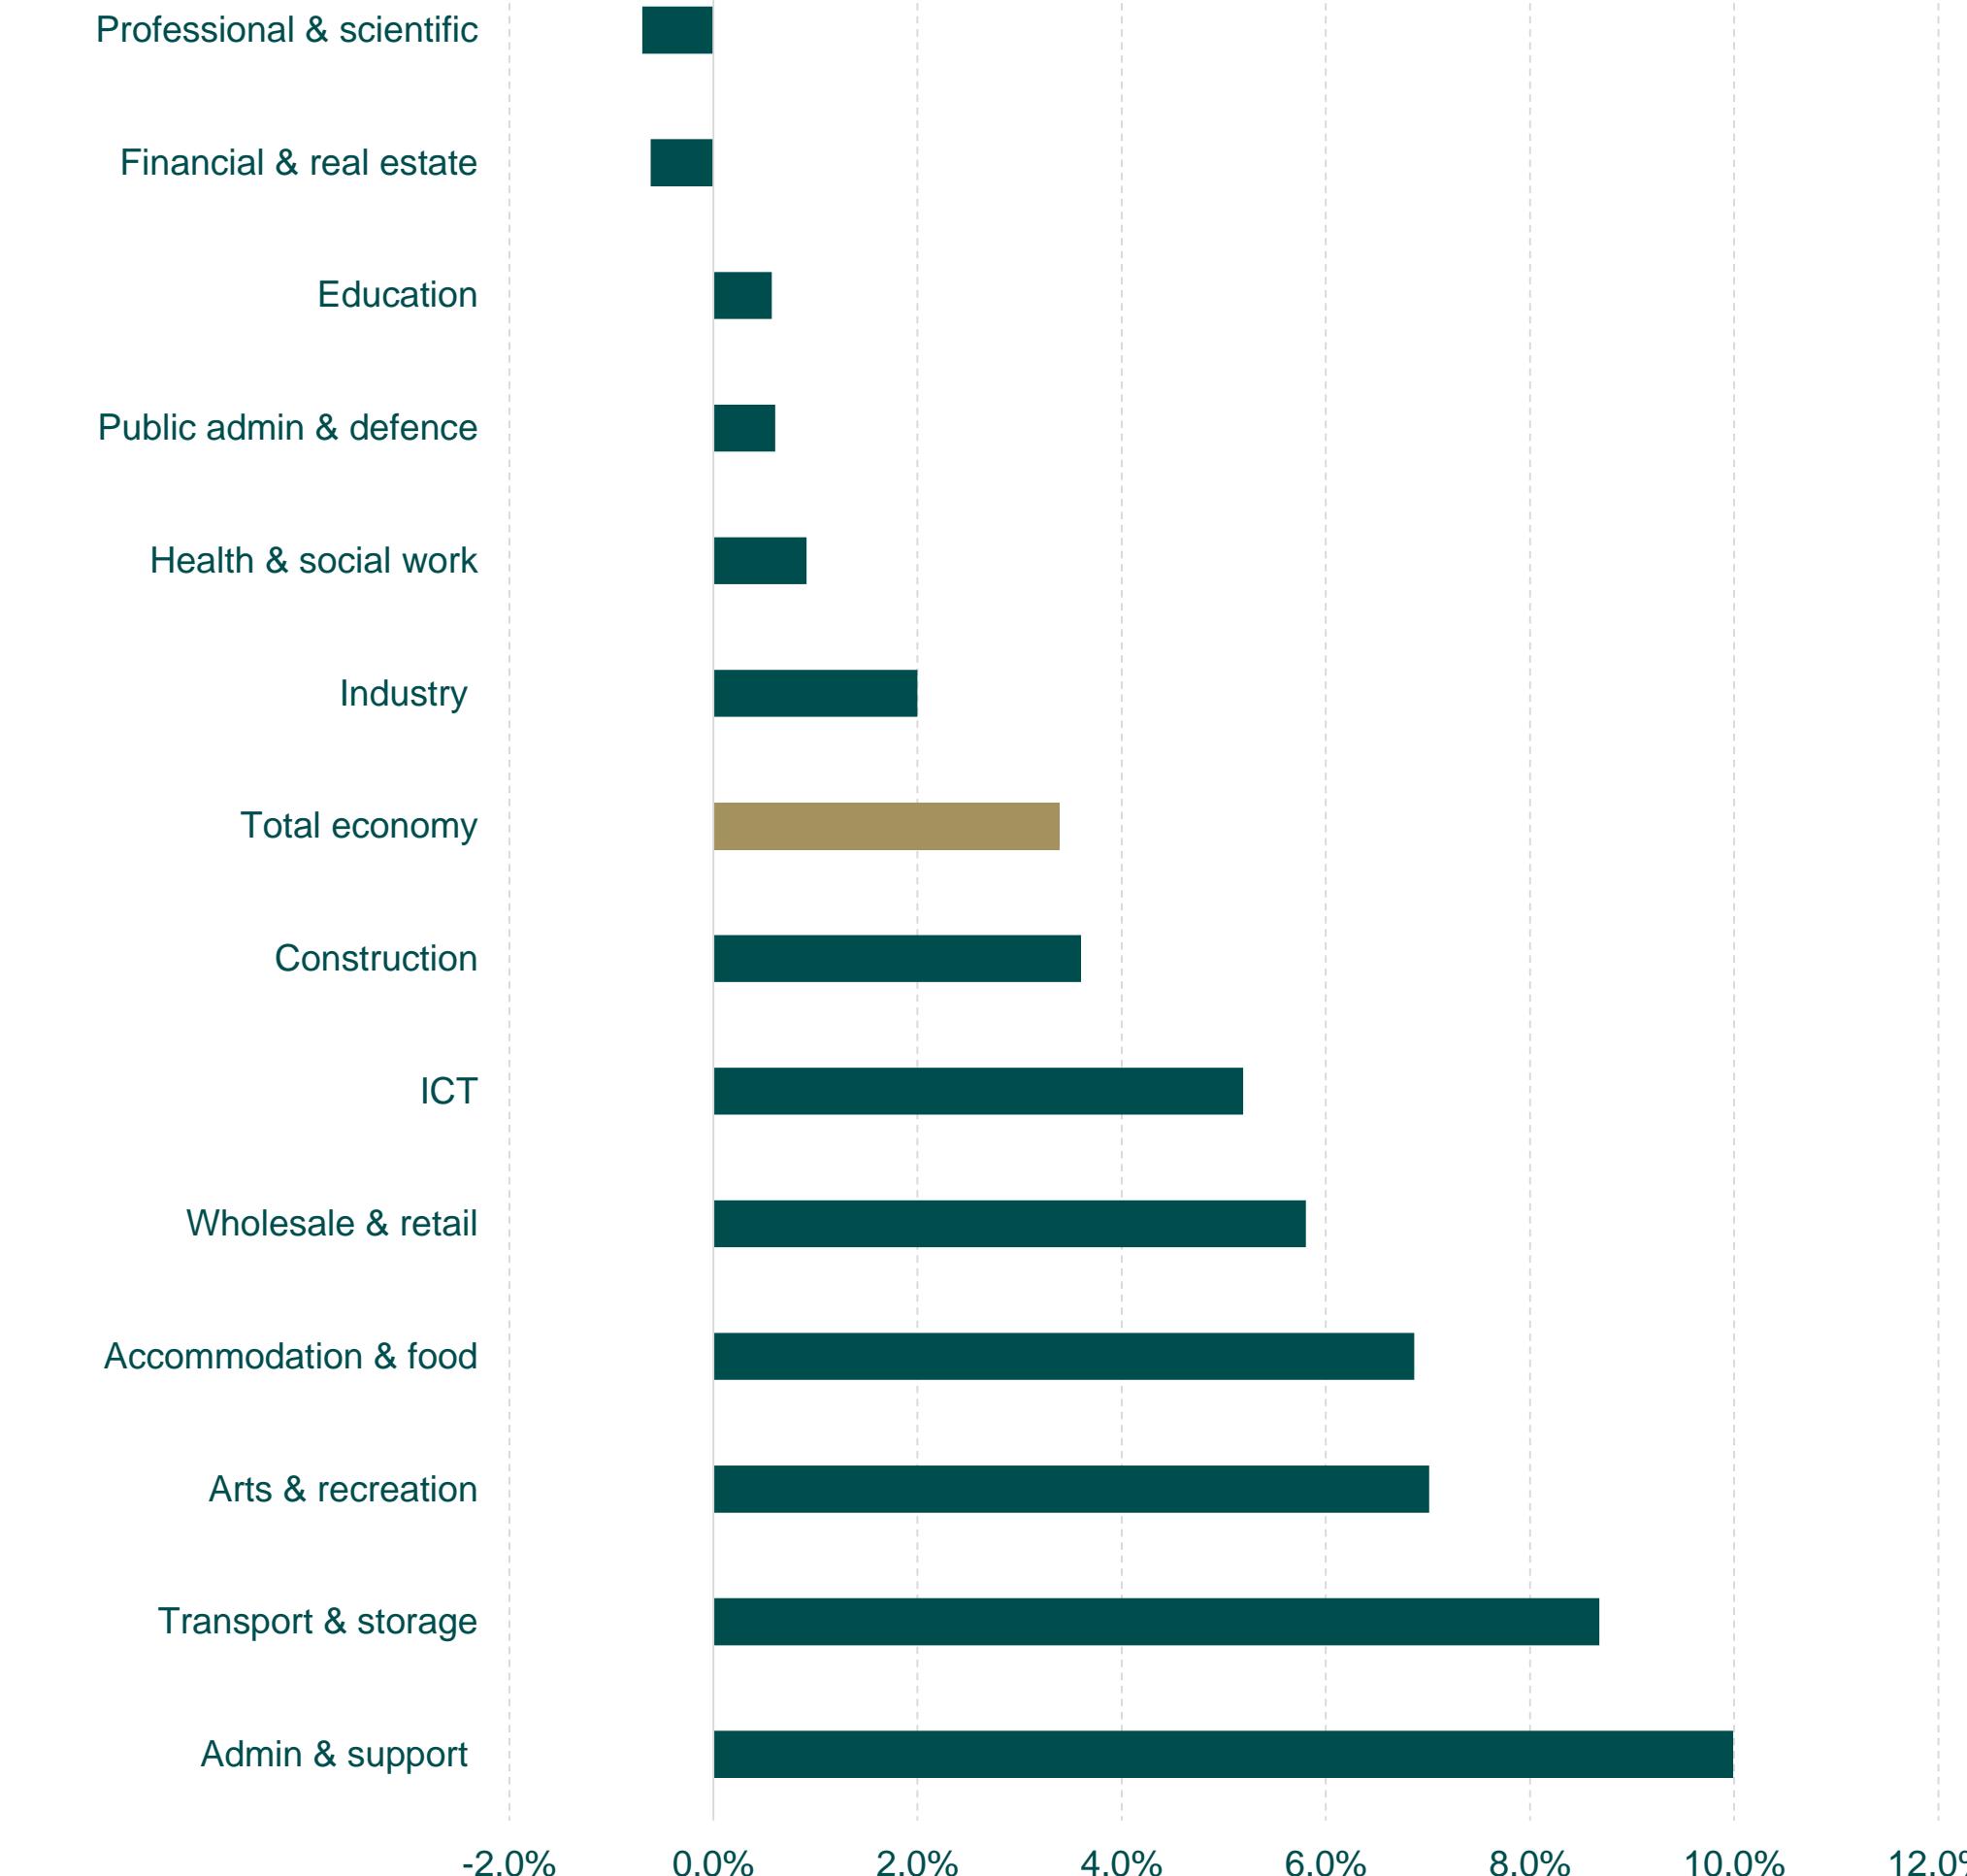

Demographic induced PR slowdown

The philips curve: dead or alive?

annual change in weekly earnings in 2019 Q1, per cent

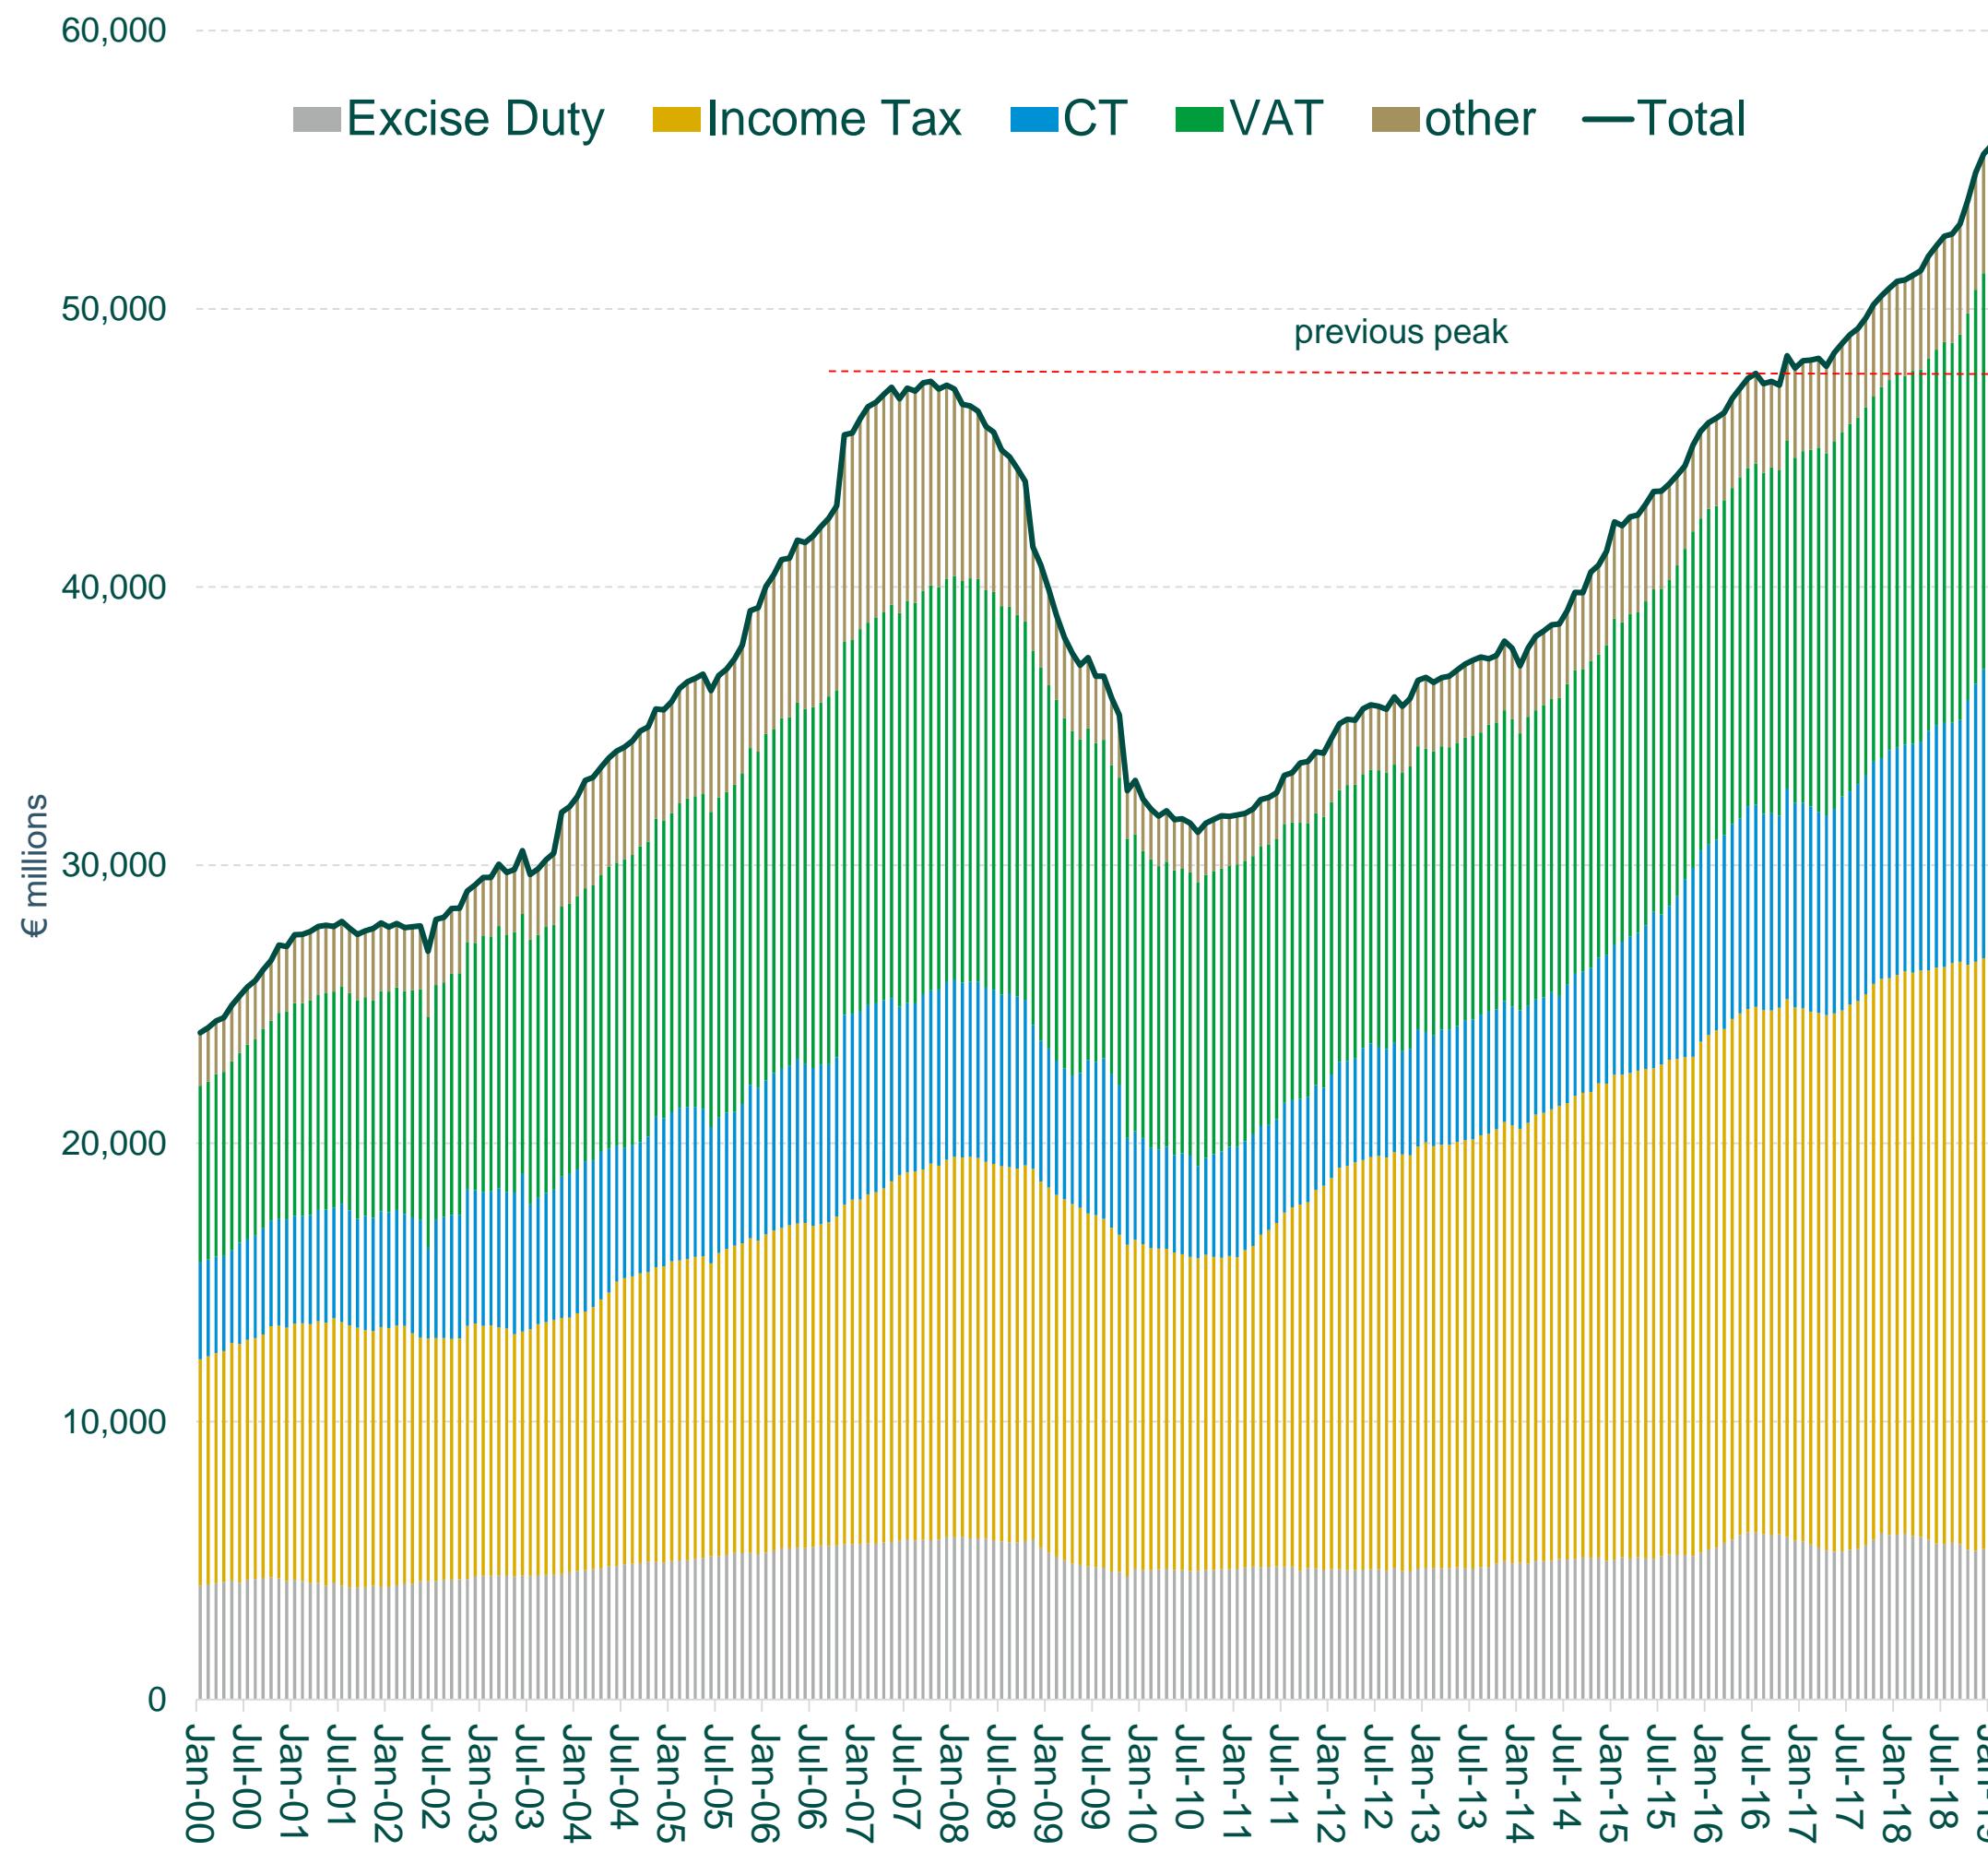

The public finances

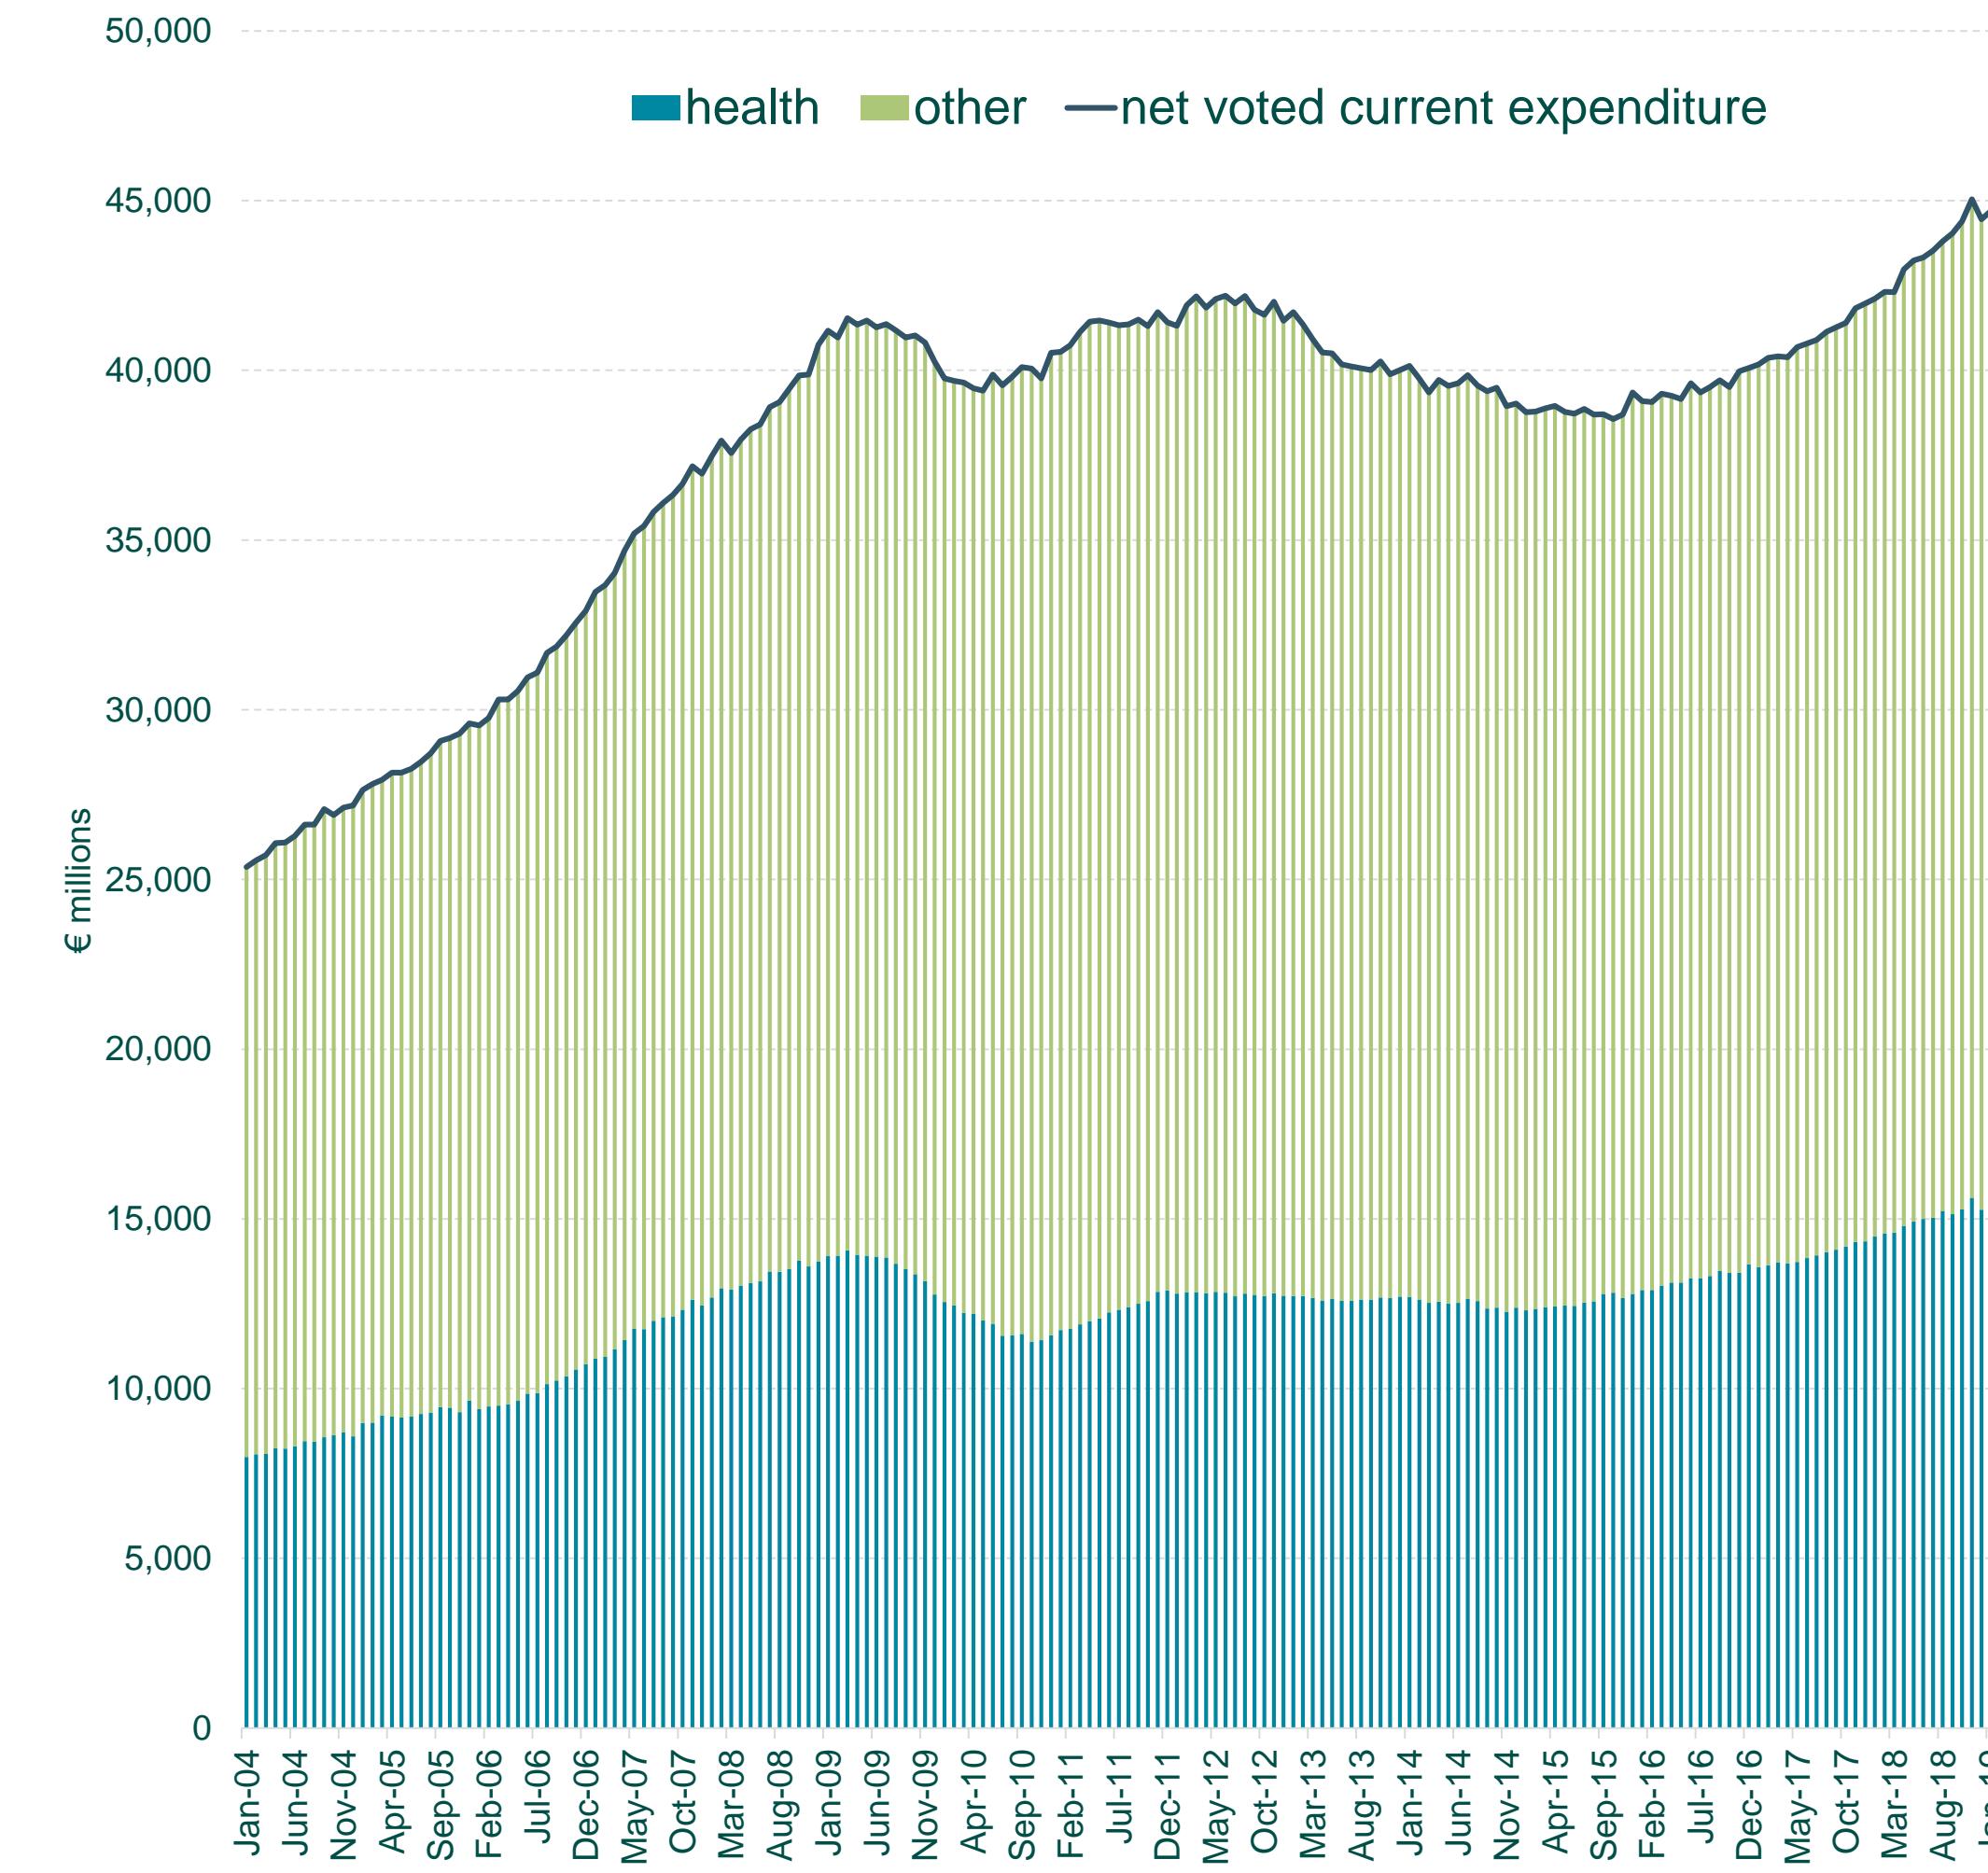

Budgetary implementation: in line with expectations

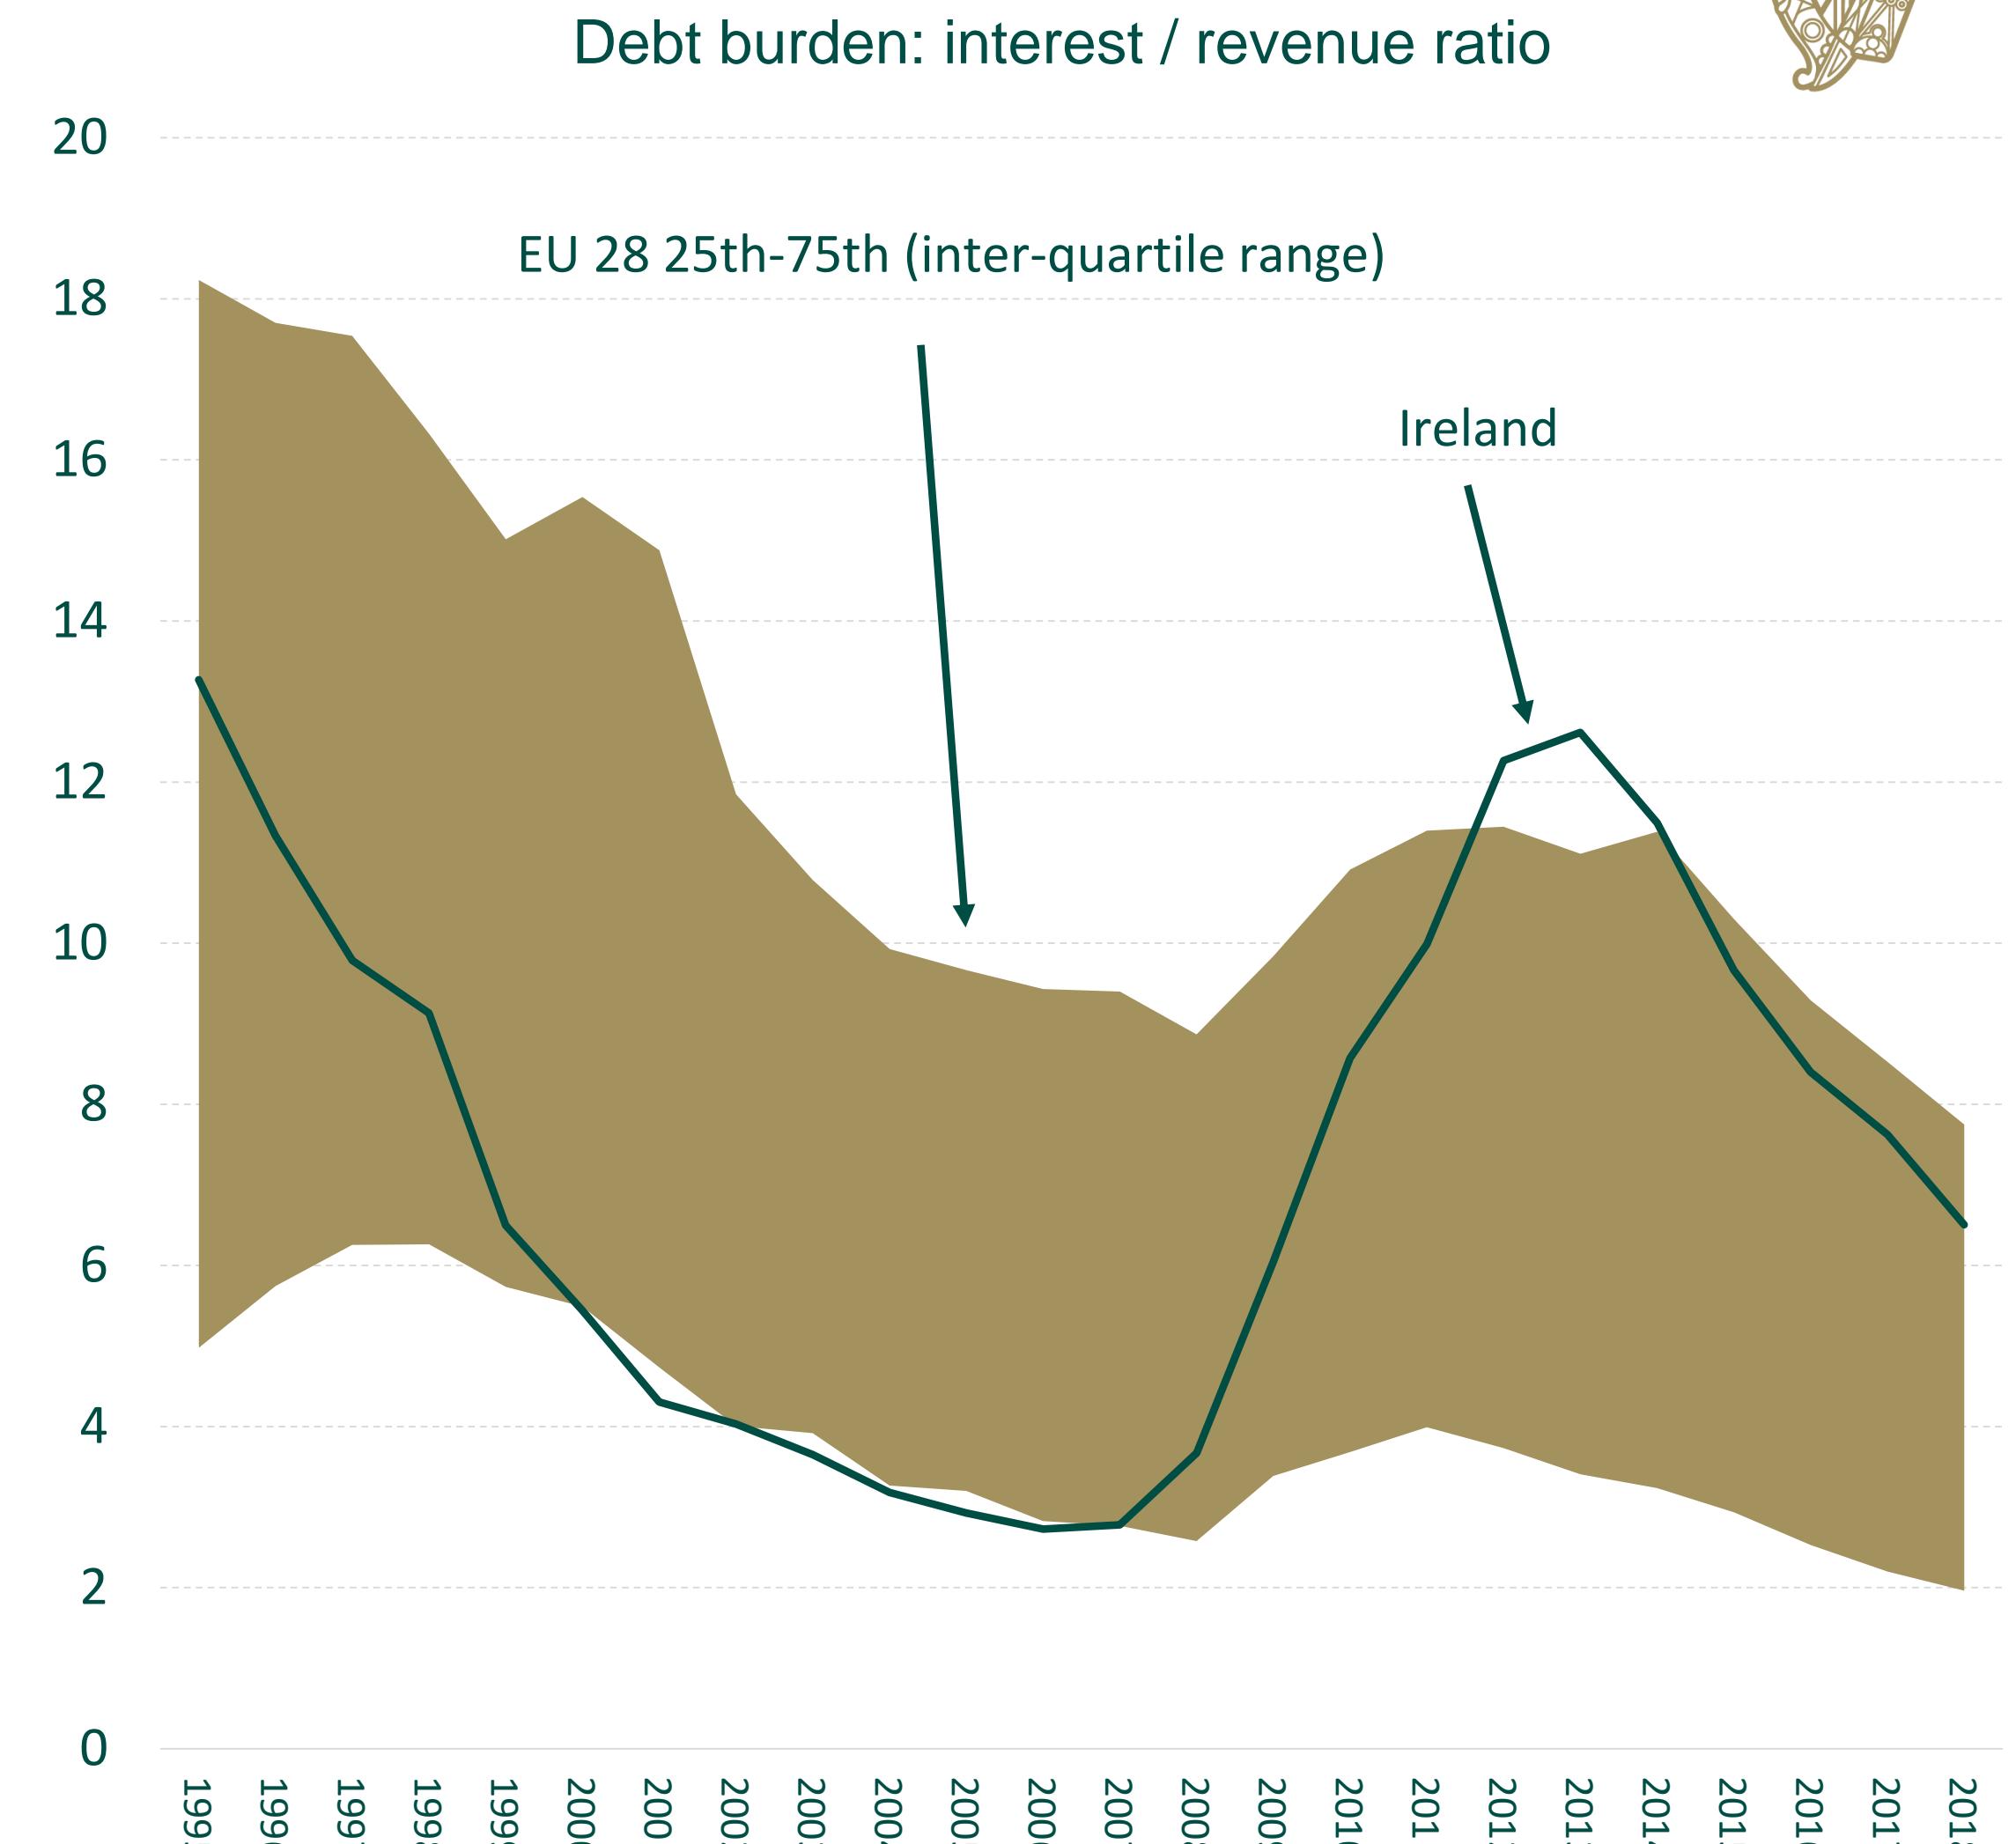

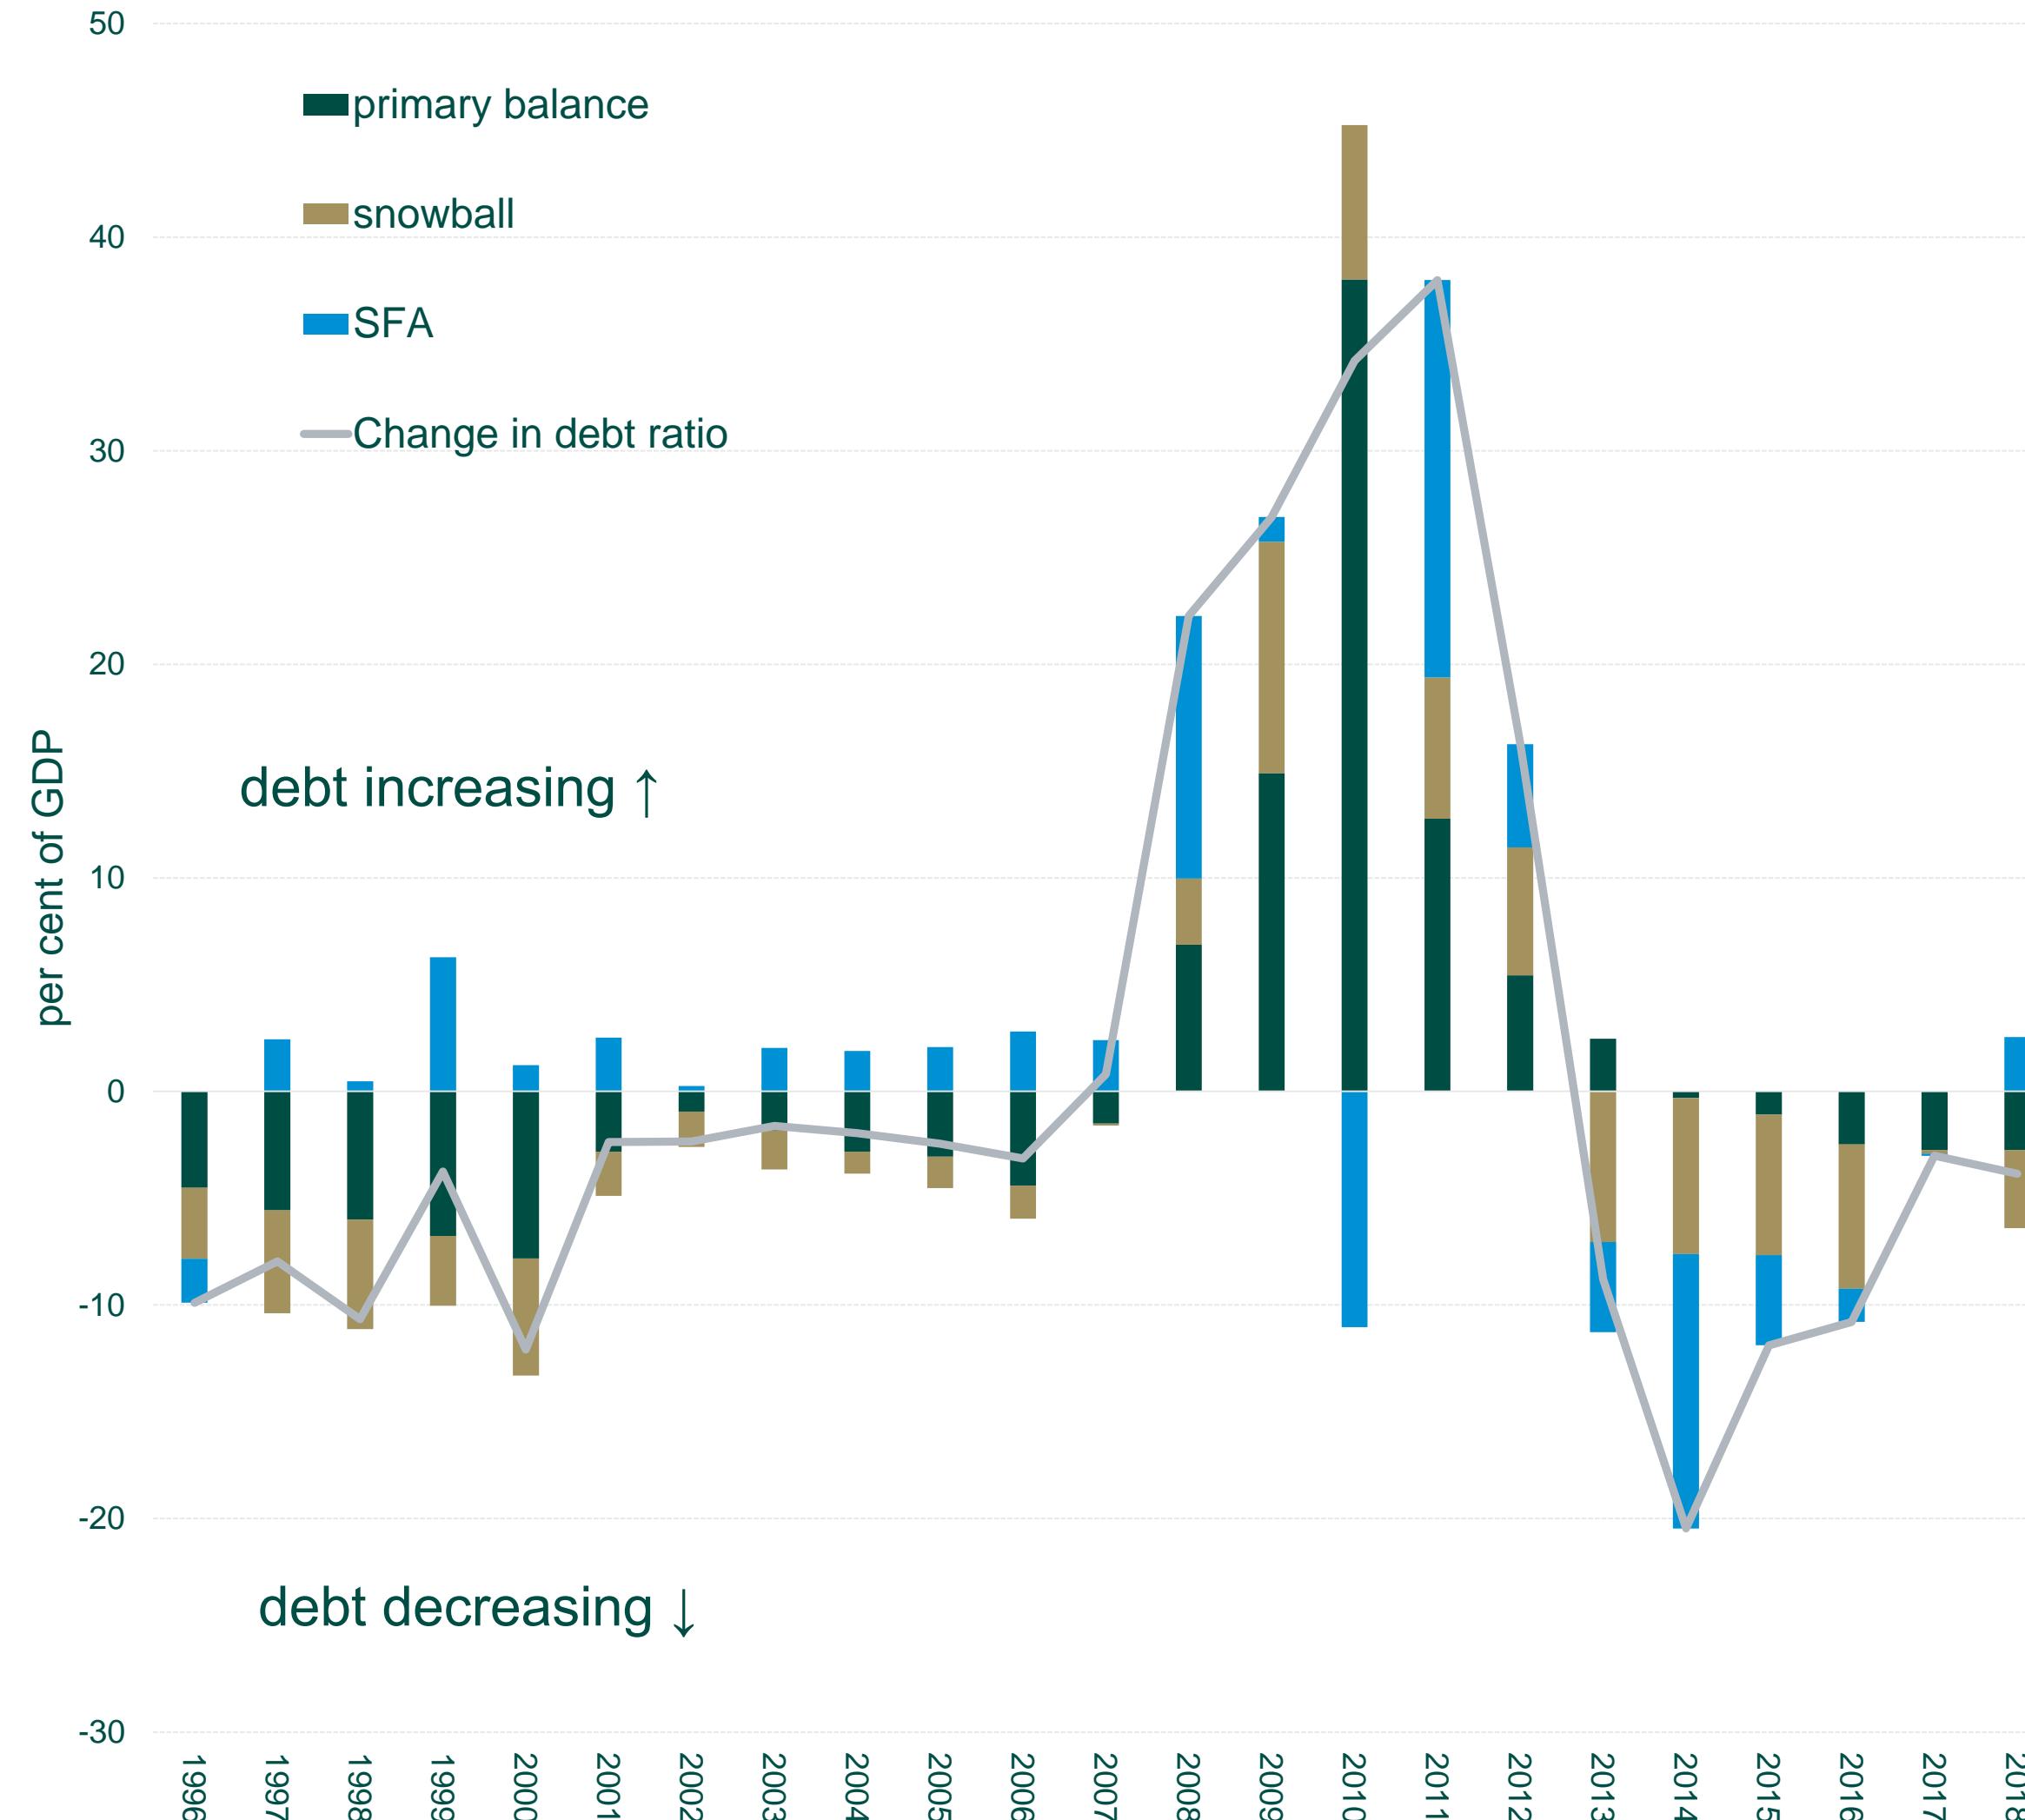

Revenue side equation

Expenditure side of equation

'snowball' main driver of debt reduction; interest burden remains high

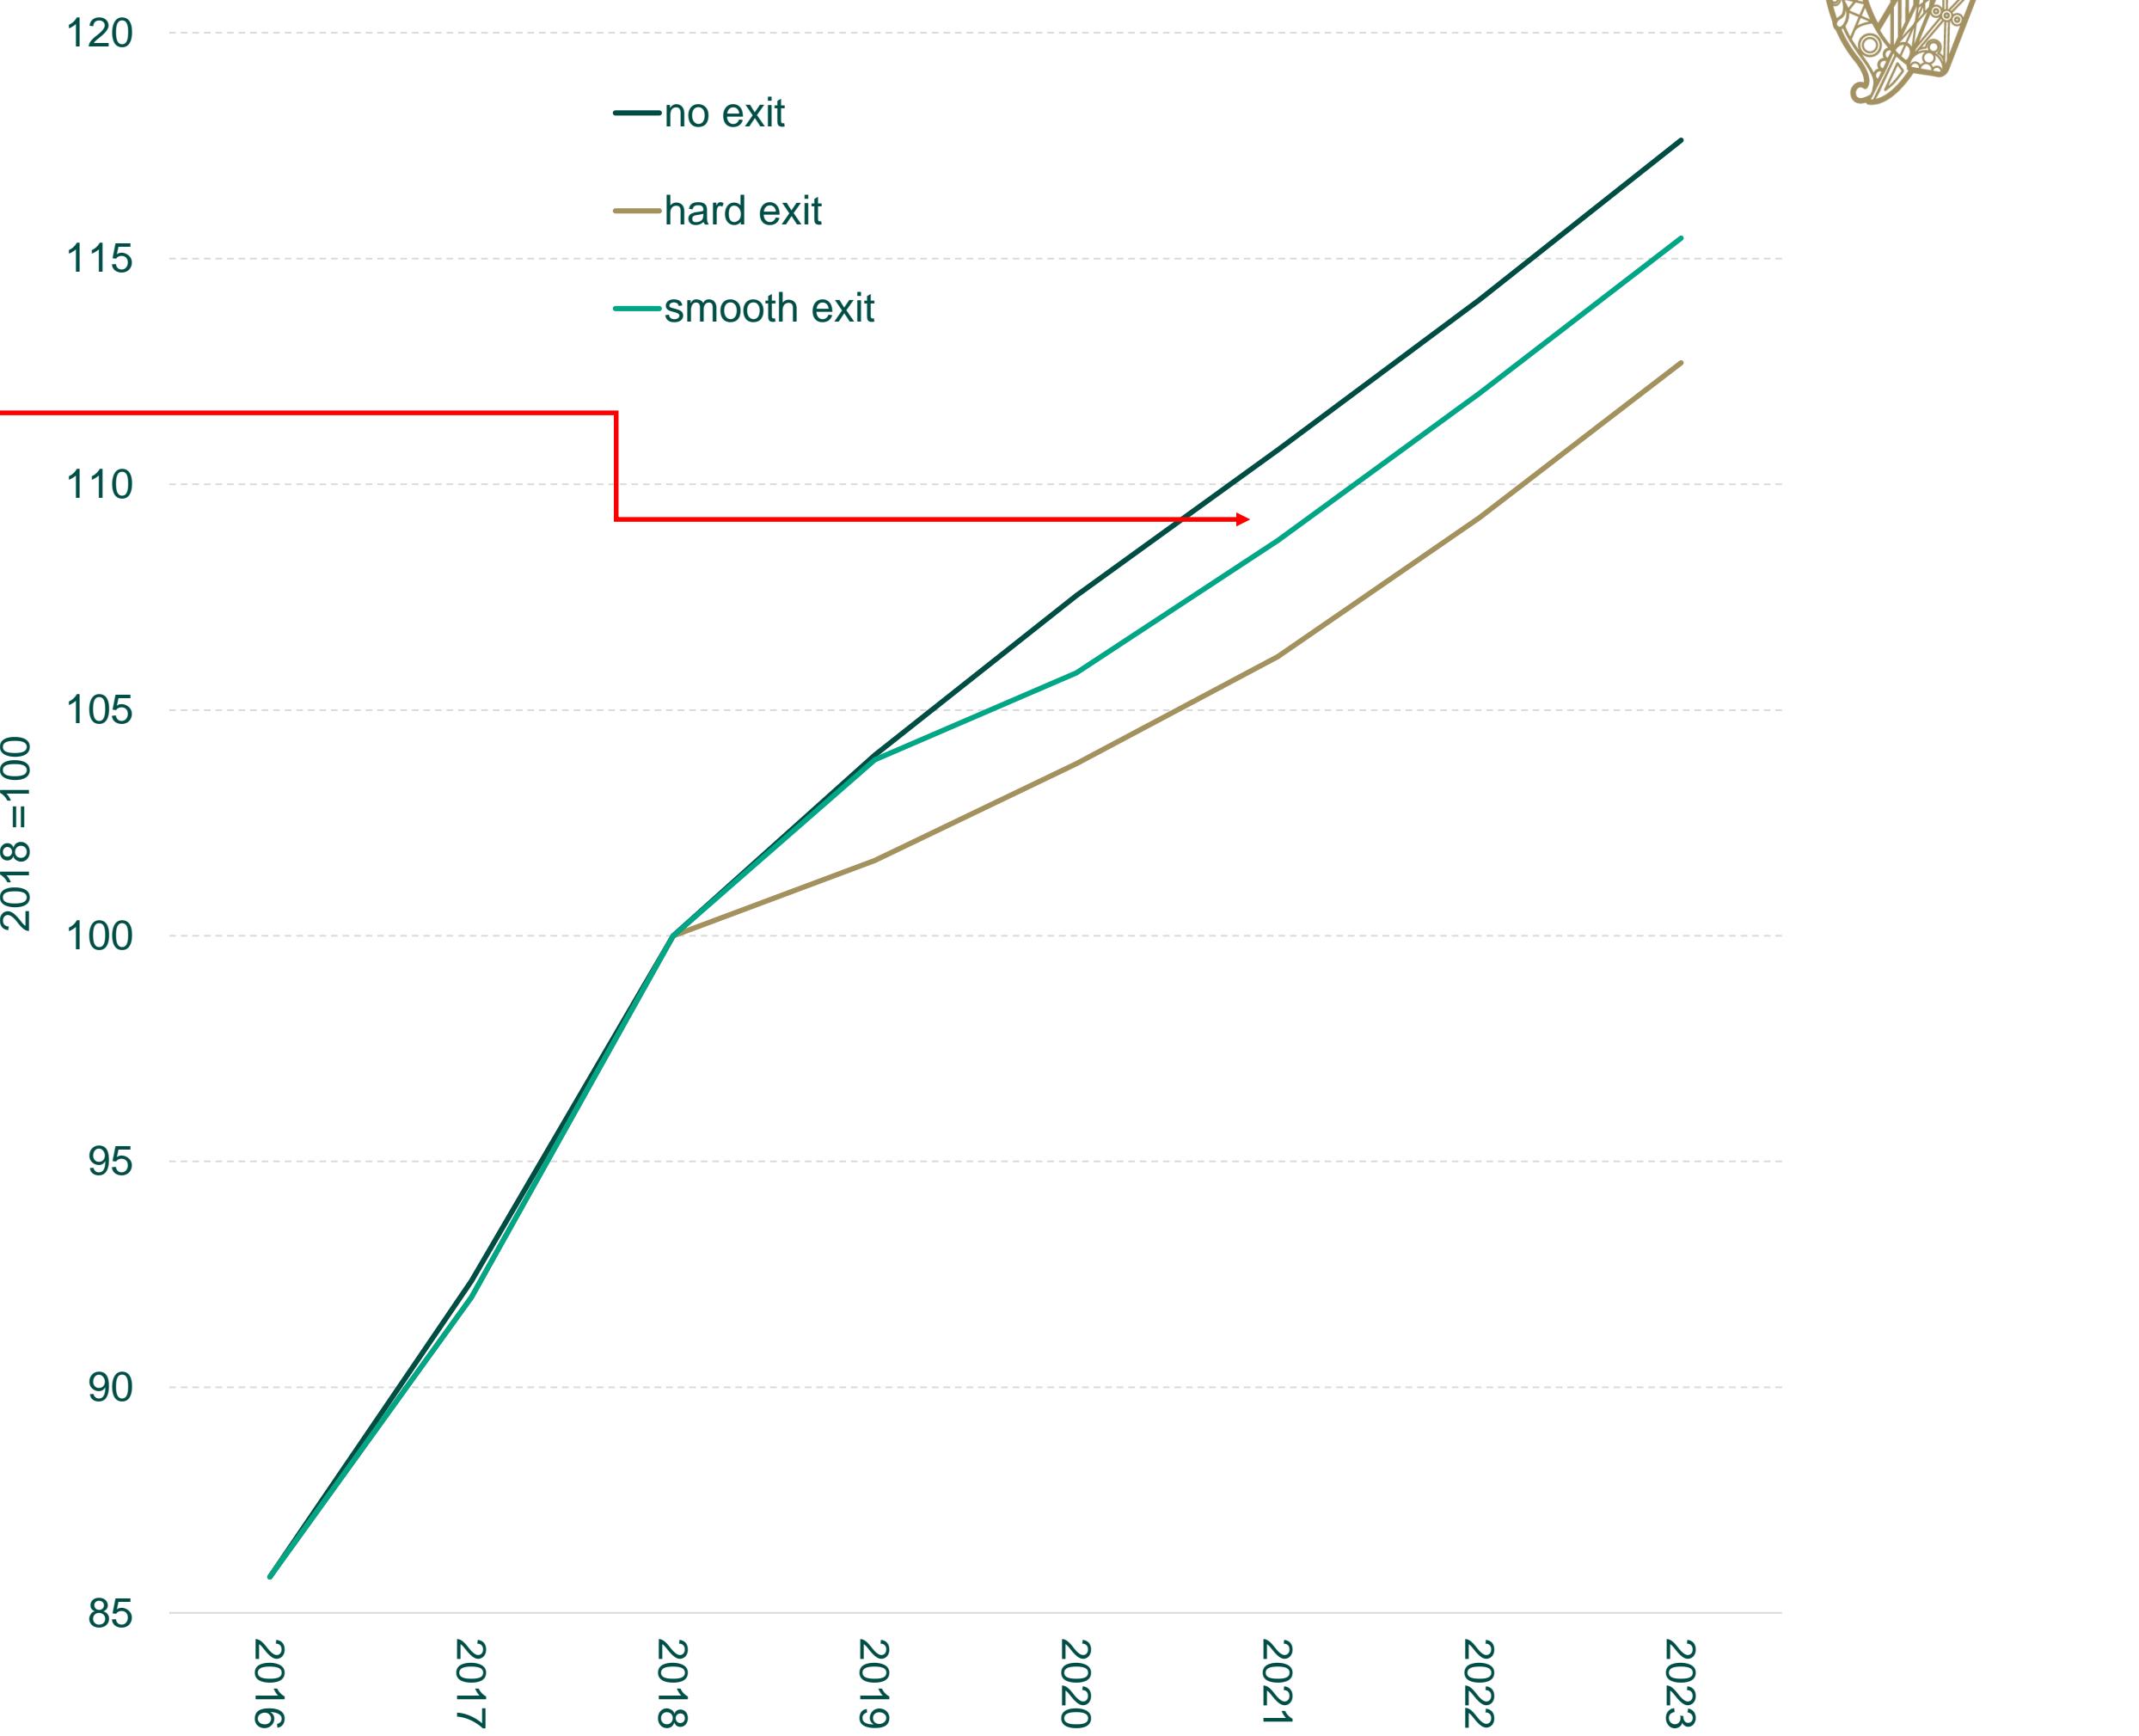

Brexit: casts a long shadow
