**Subject:** Floating Offshore Wind testing at AMETS Site Mayo

To whom it may concern,

I wish to object to the planning for the floating Offshore wind test of Annagh Head.

My reasons being are:

Noise pollution when the work starts on the site, delivering of equipment on a quiet village and road.

Traffic will be extremely busy and the road is not designed for such a volume of work this will entail. The local villagers experience this after the first test site! Materials being delivered all hours of the day/night. Preventing elderly people from sleeping.

Hazardous materials that will be placed into the ocean, not only affecting the sea creatures but the many locals who bathe in the sea.

Ocean pollution, this will affect local Fisher men and the local people. Cement, pipes etc being dumped into the ocean.

Spoiling a beautiful quiet area due to the maintenance that will be put in place and no guarantee this will work. If it does well the local people will not benefit.

Please update me about my objection.

Kind regards,
