CervicalCheck Steering Committee

Weekly report to the Minister

5 April 2019

1. Update on support package

The provision of supports to women and families is continuing. In addition, measures have been put in place to ensure that retrospective costs are reimbursed, while an automatic review system is in place to simplify and streamline the claims process to ensure prompt payment of all items covered by the Government decision. Most recent figures show that, by the end of March approximately €1.37m has been reimbursed in respect of various health and social care costs, approximately €1m of which relates to retrospective payments. There will also be additional costs associated with the medical cards that have been issued and the meeting of certain drug costs.

2. Release of records

The HSE remains focused on responding to all requests for records as soon as possible. To aid this process, external legal advisors are liaising with women and their solicitors on the release of slides. The protocol in place ensures the integrity and traceability of slides being transferred; solicitors are required to provide specific information about their chosen laboratory before slides can be released; this ensures the integrity of the slide is protected and all slides can be traced when they leave their current location. The HSE has reported that the average time to deliver slides to independent experts is 27 days.

3. Independent Expert Panel Review

The protocol for the International Clinical Expert Review led by the Royal College of Obstetricians and Gynaecologists (RCOG) has been published on the Department of Health website.

The Expert Review Panel has been provided with colposcopy and other data from CervicalCheck in respect of women who have consented to participate, and the transfer of slides from CervicalCheck labs for the purpose of the Expert Panel Review is ongoing. The most recent position, as of 3 April, is that approximately 1,045 slides have transferred. The HSE reports it is continuing to work closely with laboratories to facilitate the transfer. The Information Line remains in service and integrated with the larger helpline, with a low level of calls being received.

A telecon was held today, 5 April between the Royal College, the Department and the HSE to discuss, inter alia, communications planning for the individual and aggregate reports. A further telecon is proposed and will be organised in the coming weeks.

4. Expiration of Tests - HPV Testing Outside Recommended Timeframe

In November 2018, the HSE became aware of an issue with Quest Laboratories in relation to the usage, outside the manufacturers' recommended timeframe, of a number of tests used for secondary HPV testing. CervicalCheck confirms it has completed validation and identification of women impacted, and all letters have now issued. The HSE SIMT is monitoring the number of women who do not take up the offer of a re-test.

The HSE has advised that clinical research shows that HPV tests remain effective even when they are performed outside the recommended timeframe and that there is little risk of inaccuracy due to the issue that Quest has identified.

The HSE has advised that while the vast majority of women awaiting results for these repeat tests remain within the four to six week timeframe committed by the lab, a small number of women are regrettably waiting longer. This is due to an initial delay in the establishment of the ICT system for dealing with these tests, which took longer than anticipated. Despite this initial delay, the HSE has advised that Quest Diagnostics is confident that future samples received will have results issued within the stated four to six week timeframe.

5. Smeartaking activity and laboratory capacity

The total number of additional GP consultations was around 112,000. The estimated number of early repeat smear tests which took place between May 1st and December 31st is approximately 57,810, or just over half the number of consultations.

In regard to the backlog, the HSE has advised that it has agreed with laboratories to prioritise those slides which originate from women who attended colposcopy as this cohort of women is considered to have the highest clinical risk. In addition, the HSE has agreed with the laboratory with the largest backlog that they carry out a HPV test on smear test samples, prior to cytology, as a means of prioritising slides appropriately.

The HSE has now advised that it has sourced additional capacity internationally and it is currently working to agree commercial arrangements, and complete quality assurance processes, in order to enable it to incorporate this capacity into the CervicalCheck programme.

6. Introduction of HPV as the primary method of testing

A pre-tender market engagement seminar has taken place, and feedback is completed. This, together with laboratory capacity planning, will inform the laboratory configuration strategy and a lab subgroup for the project is in place to assess constraints and opportunities within the ecosystem of lab service providers. The working group of the CAG Committee is continuing its review of QA guidelines, while the lab subgroup intends to present its review of acceptable assays at the next Clinical Advisory Group.

Colposcopy capacity planning is underway by the National Women and Infants Health Programme, which is required to support the introduction of the HPV test. This work includes reviewing current operational pressures for all colposcopy units as well as the impact of the introduction of primary HPV testing and the RCOG review. The most recent update from the HSE advised that the majority of planned site visits have now taken place.

7. Colposcopy waiting times

The most recently reported data is February 2019. 89% of women with high grade abnormalities were seen within 4 weeks of referral (against target of 90%). 95% of women with low grade abnormalities were seen within 8 weeks of referral (against target of 90%).

Currently, time taken in a clinical setting is reported to be considerably longer to facilitate answering questions and putting women at ease, and efforts to manage any impact on waiting times include extra clinical sessions and a focus on waiting list management through appropriate categorisation of referrals.

8. Ex-gratia scheme for non-disclosure

The terms of the CervicalCheck non-disclosure ex-gratia scheme were approved by Government on 11 March 2019, including an Independent Assessment Panel comprising a retired High Court Judge (who will act as Chair), an independent clinician and a person of good standing. The Chair of the Independent Assessment Panel is retired High Court Judge,

Aindrias Ó'Caoimh and the remaining two members will be appointed shortly. All women, or their next of kin, in the 221 cohort identified from the clinical audit as having discordance in their smear test result will be invited to participate in the Scheme.

The Department of Health is currently engaging with the HSE in order to finalise arrangements for communicating invitations to the women. The invitations notification will explain the scope and purpose of the Scheme and the eligibility criteria. A consent form will be enclosed, along with any other necessary documentation including the terms of the Scheme. The Minister expects that the invitations will be issued shortly and following this, full details of the Scheme will be published on the Department's website.

Oversight and engagement with the HSE on modules of its work as follows:

- 1. Management of supports to patients/families
- 2. Provision of documents to patients
- 3. Interface with RCOG Review
- 4. Management of laboratory capacity issues
- 5. Introduction of HPV Screening

Provision of documents to patients

6. Colposcopy

1. Management of supports to patients/families				
Significant Issues	There are no exceptional items to report in relation to Community Supports.			

Significant Issues Current position, issues & challenges The team remains focused on responding to all slide requests as soon as possible - the average time to the laboratories.

deliver slides to the independent expert is 27 days. Weekly operational meetings continue to monitor

The HSE has provided 119 slides out of a total number of 127. There are 8 currently being processed which were received between Dec – Jan 31st.

A total number of 557 records have been provided, out of a total number of 566 requests. There are 9 outstanding which are being processed.

Issues: The HSE has identified a significant number of cases where it has not been informed of the requestors name or/and their designated lab expert where the slides are to be sent to – as a result we are working with those solicitors to ensure that all required details are being sent to the labs.

Interface with RCOG Review Support Team continues to hold daily meetings and teleconferences to progress deliverables, **Project** identify critical actions / timeframes, areas for escalation, and project RAIDS (Risks, Actions, Governance Issues, Decisions). Structures and processes are being established to support disclosure of results with reference to existing processes already documented e.g. HSE Open Disclosure Policy, Safety Incident Management Policy, Lookback Review Guidance, etc. **Actions Progressed Activities Planned Patient** 1.075 (63%) women have consented to participate in the Expert Panel Review. The closing date for consent forms Support Services Laboratory Discussions on-going with legal counsel to Number of slides Number of slides sent Lab agree process where slides requested for Logistics requested to date to RCOG1 RCOG Expert Panel Review are currently 341 under legal review and therefore **SONIC Medlab** 14 14 unavailable. 275 SONIC CPL 267 QUEST 1,088 689 ↑124 Coombe 62 75 1,766 1,045 Total 138 slides were shipped from SONIC Medlab and Quest w/c 25th March. There were 2 calls to the information line in the last week Information Employ regular quality checks to ensure (161 total calls to the information line since it opened in capacity meets demand. Where required, Services August 2018). An RCOG Support Team member (registered identify and assign further additional nurse) follows-up on calls to discuss any queries directly clinical & administrative resources to the with the women. call centre in line with the project plan timelines. Case Daily updates to CMS to reflect updates to consent information, slide tracking, contact notes, and other Management relevant information. System (CMS) Responses provided to individual clinicians who contact the Acute & Continue work in preparing for disclosure Community Programme with queries on the RCOG Support Programme process. and the Expert Panel Review. Services SOP established to support provision of medical records from acute services to the Expert Review Panel where Current The transfer of slides from Cervical Check labs for the purpose of the Expert Panel Review has commenced. Further engagement and on-going communication will continue with all laboratories to address any challenges position, that arise, in order to ensure the safe and quality transport of slides. significant The UK lab (North Bristol NHS Hospital) has advised that they can only process receipt of up to 200 slides per issues week, although they can accept larger quantities of slides and store them until they can be processed. The RCOG Support Team is working with all labs to ensure a steady but manageable transfer of slides from the USA and Ireland to Bristol. The Coombe has one remaining slide for transport to the UK, however there has been a delay in the delivery of equipment required to digitally image the slides to agreed specifications. The equipment was delivered on 26th March, with training to take place soon after installation, and it is expected that the slide can be imaged and transported within the next week. SONIC Medlab do not have a specific machine to digitally image slides to the specifications required. They have, however, commenced manually imaging slides to the specifications outlined (a time-consuming process using a camera attached to the microscope, which is used for capturing high magnification) in order to commence transfer of slides to the RCOG-contracted lab in Bristol w/c 25th March. Medlab is working with the NSS and the Coombe to have all remaining slides imaged using the Coombe's digital imaging equipment, once appropriate staff have been identified and trained on the machine.

^{*} The total number of slides sent to the UK may be greater than total number of slides requested from labs due to troubleshooting process whereby 2 slides (original and treated) are prepared from one sample

4. Manageme	ent of Laboratory Capacity Issues				
Uptake of Smear	Out of Cycle Smears				
Tests	Out of Cycle Smears The total number of additional GP consultations between May 1 st to December 31 st was more than 112,000. The estimated number of early repeat smear tests to take place in the period of May 1 st to December 31 st is in the region of 57,810.				
Average Time for Processing Results	We remain extremely concerned at the length of time being taken for reporting of cervical smear tests, which regrettably are being reported between 3 weeks and 33 weeks of the test being taken. In some cases this is taking longer. However, it is worth noting that over half of samples received by the labs are being processed within 15 weeks.				
	We have worked with existing private providers, other private providers and public service providers in other countries to try and grow our laboratory capacity. Some of our existing providers have managed to reduce the wait times and we continue to work with others to try and find additional capacity. While we continue to pursue active leads this has proved very challenging due to the global shortage in cytology. This has been caused as a result of the reduced cytology requirement as countries implement HPV primary screening – which sees a reduction of c80% for cytology requirements. We are actively trying to identify possible solutions that will help reduce the wait times which we know are causing a lot of anxiety for women.				
	Whilst this is very undesirable, our clinical advice is that this poses a very low risk to women. Notwithstanding this, we recognise that these delays are extremely difficult for women and we are making every effort to improve this situation. We have made significant improvements in the turnaround times with two of our three laboratories and are working closely on an improvement plan with the third laboratory. We are absolutely focused on reducing waiting times for results as quickly as possible.

6. Colposcopy

- CervicalCheck has established a network of quality assured colposcopy clinics for women requiring further investigation following a smear test. A woman can be referred to one of 15 colposcopy clinics located nationwide.
- Extra clinical sessions have been added to reduce waiting lists
- Within the current climate time taken in a clinical setting is considerably longer to facilitate answering queries and putting women at ease
- Extra efforts made when appointments are cancelled to fill the vacant slot to further reduce waiting lists.
- Extra efforts to ensure the increased referrals are categorised in a prompt manner to ensure high and low grade are seen within guidelines
