- 31.11 Ensure appropriate burial depths and heat shielding from cable burial and rock placement (where applicable). This will indirectly reduce effects from heat emissions and electro-magnetic fields (EMF).
- 31.12 Ensure the use of noise-attenuation fencing, solid hoarding or other acoustic barriers to reduce in-air noise propagation and to conceal human activity. The barrier material shall have a mass per unit area exceeding 7kg/m² in accordance with the recommendations of BS 5228 Part 1:2009+A1:2014 Part B.4.
- 31.13 Ensure that Facilities and works within the intertidal zone will be restricted in extent with contractors working within defined parameters and working areas. Working areas will be established during the setting out phase of the Facilities and project and clearly defined to minimise impacts on non-breeding birds which use the beach and intertidal area at the proposed landfall location.

A licence-eligible, suitably qualified, underwater archaeologist shall be engaged to carry out the Underwater Archaeological Impact Assessment (UAIA). The archaeologist

shall also be suitably experienced, with a track record in dealing with marine and offshore developments, resultant report submission.

b. This evaluation shall be conducted by a multidisciplinary team of specialists to determine the archaeological, including artefact-bearing, potential of the submerged forest deposits and the nature, date and extent of any such archaeological materials that may exist.

c. The evaluation shall include detailed topographical mapping of the peat horizon, a systematic wade and dive survey and careful manual excavation and paleo environmental sampling of a substantial section of the deposit (to be agreed with the Department of Housing, Local Government and Heritage via a method statement), aimed at retrieving and plotting the locations of worked stone tools and other archaeological materials, should they be identified.

d. The UAIA shall include a hand-held metal detection survey, undertaken by a suitably licenced and experienced detectorist. A Dive Licence (section 3 1987 Act) and Detection Device consent (section 2 1987 Act) will be required for these works.

If potential or identified sites, features or artefacts cannot be avoided to allow for preservation in situ, then the UAIA Report Recommendations shall put forward an archaeological mitigation strategy to address this, including preservation by record (archaeological testing and/or full archaeological excavation).

h. Once all surveys and follow up interpretations (including radiocarbon dating and palaeoenvironmental analysis) have been completed, the full information is to be compiled into a UAIA report and submitted to the Underwater Archaeology Unit, National Monuments Service for review and further comment. The Licensee shall be prepared to be advised by the Department of Housing, Local Government and Heritage in this regard.

i. For wrecks and other sites identified, or the potential location of same, the results to be reviewed by the Licensee and the archaeologists and appropriate exclusions placed around them to ensure they are avoided by any Facilities and works,

including SI works.

j. Once the UAU or the National Monuments Service has had the opportunity to review the UAIA Report, further recommendations may arise. It should be borne in mind that should significant archaeological remains be identified, further archaeological mitigation / monitoring may be required.
