and other 200 mm will be used to nest
next table. Hot galvanised as well

A table is made to carry 4 Roll'Bags

Some written informations :

A trestle is 3.4m long (+20cm for nesting), 1.3m large at the top, and approx. 80cm high, the trestle is made of 20mm diameter steel bars. 4 roll'bags can be put on one table.

A table weighs 45kg.

All tables are hot galvanized in order to increase their life span and avoid rust and steel wastes on the seashore after a few years.

A Roll'Bag is 115cm long, 70cm large and 12,5cm wide.

The volume inside is 40L but approx. 1/4 of the volume is used by the foam, which is locked inside to avoid any littering during bad weather. So its 30L for the oysters inside.

The foam volume is approx. 8L (it doesn't take the full 1/4 of the Roll'Bag) which can lift up to 21kg of oysters thanks to the tides (and waves).

Of course, 4 foams of 8L each, with oysters in the Roll'Bags, will not be able to lift the table itself.

Anyway we advise to seal tables in the ground since it is the only "weak point" of the system (hooks that hold Roll'Bags on the tables resist up to 1.5 T of traction).

"diabolos" (part sealed on the tables on which the Roll'Bag will be hooked) can be sealed on the table on land before deploying them on the seashore.
