A New Vision For Sustainable Mobility

A review of Ireland’s public transport and active travel policy

Have your say
What is Sustainable Mobility?

Linking people and places in a sustainable way by supporting:

• comfortable and affordable journeys to and from work, home, school, college, shops and leisure

• travel by cleaner and greener transport

• a shift away from the private car to greater use of active travel (walking and cycling) and public transport (e.g. bus, rail, tram).

What are we doing?

• We’re reviewing our existing sustainable mobility policy by asking:
  + What is working well?
  + What needs to improve?
  + What sustainable mobility policy do we need for the future?

Why is it important?

• Our existing sustainable mobility policies are now 10 years old;

• In that 10 years much has changed and that change will continue into the future;

• Ireland has a growing population and an expanding workforce;

• We expect to see a minimum of 500,000 new houses built by 2040; and

• We need to ensure our sustainable mobility policy plays its part in supporting Ireland’s response to our climate action challenge.

How much are we spending?

Approx. €790 million in 2019

- Expanded PSO bus fleet and services
- Carbon reduction measures
- Extended trams on Luas
- Increased funding for walking and cycling
- Improved funding for rail maintenance

What are our current policies?

• Project Ireland 2040
• Climate Action Plan 2019
• Smarter Travel – A Sustainable Transport Future 2009 to 2020
• National Cycle Policy Framework
What should be our vision for sustainable mobility?

What objectives should we prioritise?

What targets should be set for sustainable mobility?

How can we deliver value for money for the taxpayer?

How can we encourage people to make cleaner and greener choices in transport decisions?

How can we further enhance the quality, reliability, safety and integration of sustainable mobility services?

How can sustainable mobility meet the needs of Ireland’s changing population?

How can technology shape future sustainable mobility provision?

What other opportunities and challenges do we need to consider?

Each of the thematic background papers also includes a number of specific questions on the particular area.

What questions are we asking?

What information are we publishing?

What priorities are we trying to balance?
How can you take part?

The public consultation documents can be viewed online on the Department of Transport, Tourism and Sport website at www.dttas.gov.ie.

You can send your views either electronically to sustainablemobilityreview@dttas.gov.ie or by post to:
