Screening for Appropriate Assessment

Determination on proposed activities within Killyconny Bog Special Area of Conservation [site code: 000006] in accordance with Regulation 42A EC (Birds and Natural) Habitats Regulations 2011-2021

1. Introduction

This determination on Screening for Appropriate Assessment (AA) has been made by the Ecological Assessment Unit (EAU) of the Department of Housing, Local Government and Heritage (DHLGH) in accordance with Regulation 42A(8) of the European Communities (Birds and Natural Habitats) Regulations 2011-2021 ('the 2011 Regulations").[1]

On the 24th February 2026, in accordance with the requirements of Regulation 42A(3) of the 2011-2021 Regulations, the Minister for Housing, Local Government and Heritage ('the Minister') furnished the EAU with a request for a Screening for Appropriate Assessment (AA) determination for the proposed activities within Killyconny Bog SAC [000006]. Hereafter referred to as "the project".

The EAU have evaluated and analysed the information contained in the referred to above documents and location maps provided and carried out a determination. The purpose of this document is to provide a record and an audit trail of the EAU reasoned thinking in view of best scientific information and the Conservation Objectives of European Sites. This determination does not constitute consent or authorisation for the proposed works. The proponent is responsible for ensuring that all other necessary consents, licences, or permissions are obtained, including, where relevant, a declaration under Section 5 of the Planning and Development Act 2000 (as amended).

[1] As inserted by Regulation 7 of the European Union (Birds and Natural Habitats) (Amendment).

2. Background

Pursuant to Regulation 42A(1) of the European Communities (Birds and Natural Habitats) Regulations, 2011 (S.I. 477 of 2011), a Screening for AA is required to be carried out on the project. AA is a process required under Article 6(3) of the EU Habitats Directive. Article 6(3) is transposed in Ireland by the European Communities (Birds and Natural Habitats) Regulations 2011 (S.I. No. 477 of 2011), as amended, and by Part XAB of the Planning and Development Act, 2000, as amended.

All plans and projects which are not directly connected with or necessary to the management of a European Site, but which either individually or in combination with other plans or projects, are likely to have a significant effect on a “European Site”, require an AA of these effects to determine if they will adversely affect the integrity of these sites. The proposed monitoring is considered to fall under the requirements of AA as applied to all plans and projects.

The Screening for AA process scrutinises the plan or project to determine if there is potential for likely significant effects either individually or in combination with other plans or projects, on a European Site. European Sites are part of the Natura 2000 network and include those designated as Special Areas of Conservation (SAC), Candidate SACs (cSACs) or Special Protection Areas (SPA). This Screening for Appropriate Assessment describes the outcome of this analysis in respect of the project.

3. Legislation and Guidance

This section provides details on the adopted methodology with sources of guidance and information gathered to inform the preparation of the report.

3.1. Guidance and Data Sources

- Communication from the Commission on the precautionary principle. European Commission (2000);

3.2. Assessment Methodology

This report is based on review of desktop data. Sources of information utilised for this report and accessed during March 2026 include the following:

- National Parks & Wildlife Service (NPWS) Designations Viewer[2]; and,
- National Biodiversity Data Centre (NBDC) Maps[3].

3.3. Legislative Background

According to the EU Habitats Directive (92/43/EEC) and the EU Birds Directive (79/409/EEC), Member States are required to establish a Natura 2000 network of sites of highest biodiversity importance for rare and threatened habitats and species across the EU.

In Ireland, the Natura 2000 network of European sites comprises SACs, candidate SACs and SPAs.

SACs are selected for the conservation of Annex I habitats (including priority types which are in danger of disappearance) and Annex II species (other than birds). SPAs are selected for the conservation of Annex I birds and all migratory birds and their habitats. The Annex habitats and species, for which each site is selected, are the Qualifying Interests (QI) for SACs and Special Conservation Interests (SCI) for SPAs of each site. Conservation Objectives for the site are defined for these QI or SCI.

A key requirement of the Habitats Directive is that the effects of any plan or project, which is not directly connected with or necessary to the management of a European Site, but which alone, or in combination with, other plans or projects, are likely to have a significant effect on a European Site, should be assessed before any decision is made to allow that plan or project to proceed. The obligation to undertake a screening for AA, and if necessary, an AA, derives from Article 6(3) of the Habitats Directive and both involve a number of steps and tests that need to be applied in sequential order.

Article 6(3) is concerned with the strict protection of sites, while Article 6(4) is the procedure for allowing derogation from this strict protection in certain restricted circumstances.

[2] National Parks & Wildlife Service Designation Viewer. Accessed at ArcGIS Web Application 04/03/2026

[3] National Biodiversity Data Centre Maps. Accessed at Maps - Biodiversity Maps (biodiversityireland.ie) 04/03/2026

Article 6(3) of the Habitats Directive states:

> "Any plan or project not directly connected with, or necessary to, the management of the site but likely to have a significant effect thereon, either individually or in combination with other plans and projects, shall be subject to appropriate assessment of its implications for the site in view of the site's conservation objectives. In the light of the conclusions of the assessment of the implications for the site and subject to the provisions of paragraph 4, the competent national authorities shall agree to the plan or project only having ascertained that it will not adversely affect the integrity of the site concerned and if appropriate, after having obtained the opinion of the general public".

Article 6(4) states:

> "If, in spite of a negative assessment of the implications for the site and in the absence of alternative solutions, a plan or project must nevertheless be carried out for imperative reasons of overriding public interest, including those of social or economic nature, the Member State shall take all compensatory measures necessary to ensure that the overall coherence of Natura 2000 is protected. It shall inform the Commission of the compensatory measures adopted.
>
> Where the site concerned hosts a priority natural habitat type and/or a priority species, the only considerations which may be raised are those relating to human health or public safety, to beneficial consequences of primary importance for the environment or, further to an opinion from the Commission, to other imperative reasons of overriding public interest."

The competent authority is required to carry out a screening for AA, and if necessary, an AA as required by Article 6(3) of the Habitats Directive. If the competent authority determines that the plan or project will adversely affect the integrity of a European site, it may only authorise that plan or project by following the Article 6(4) procedure.

The Article 6(3) and 6(4) procedures are outlined as follows:

Stage 1 - Screening for Appropriate Assessment – to assess, in view of best scientific knowledge, if the project or plan, individually or in combination with another plan or project is likely to have a significant effect on the Natura 2000 site.

Stage 2 - Appropriate Assessment – This is required if it cannot be excluded, on the basis of objective information, that the project or plan, individually or in combination with other plans or projects, will have a significant effect on a Natura 2000 site. The AA must include a final determination by the competent authority as to whether or not a proposed project would adversely affect the integrity of a Natura 2000 site. In order to reach a final determination, the competent authority must undertake examination, analysis and evaluation, followed by findings, conclusions and a final determination. The appropriate assessment must contain complete, precise and definitive findings and conclusions, and may not have lacunae or gaps.

Stage 3 – Assessment of alternative solutions - the process which examines alternative ways of achieving the objectives of the project or plan that avoid adverse impacts on the integrity of the Natura 2000 site.

Stage 4 - Assessment where no alternative solutions exist and where adverse impacts remain - an assessment of compensatory measures where, in the light of an assessment of imperative reasons of overriding public interest (IROPI), it is deemed that the project or plan should proceed.

Under Regulation 42A(1) of the European Communities (Birds and Natural Habitats) Regulations, 2011-2021 (S.I. 293 of 2021), the Ecological Assessment Unit is the competent authority in relation to screening for AA of projects and plans (such as the proposed monitoring) which the Minister proposes to undertake or adopt.

4. Project Overview

This proposed project consists of events and materials to raise awareness and knowledge of the importance of peatlands, their flora and fauna, with a focus on Killconny Bog SAC [000006].

Killyconny Bog is a raised bog situated approximately half way between Virginia and Kells on the Cavan/Meath border and some 8 km from each. It is underlain by Lower Palaeozoic shales and consists of two small basins which have coalesced over a low drumlin ridge. There are few raised bogs in the north-east region and Killyconny Bog seems to be one of the best developed. Though some marginal drainage and cutting has taken place, the central part of the bog is relatively intact. Killyconny Bog is of considerable conservation value, being one of the largest extant areas of relatively intact raised bog in the north-east of the country. The site contains good examples of the E.U. Habitats Directive Annex I priority habitat active raised bog and the non-priority habitat degraded raised bog (capable of regeneration).

4.1. Purpose

The purpose of this proposal is primarily to create engagement with the bog and raise awareness of the importance of the site, its flora and fauna. The project includes information panels and leaflets, bog visits and information talks.

5. Project Description

The main aspect of this project is to deliver events and information to engage people with the bog. The proposal includes:

- Production and installation of 5 information panels to draw attention to local points of interest, educate walkers about the SAC habitats and species they may come across. The suggested boards are:
  - SAC and its background, rules and significance
  - Bog formation and historical use (drainage, cutting etc.)
  - Bog ecology, flora and fauna
  - Bog as a carbon sink
  - Local history, historic buildings and archaeological sites
- Design & Print 2 information leaflets on the flora & Fauna on Killyconny Bog SAC.
- Website updates and maintenance.
- Art day on the Bog in conjunction with Hinterland Festival Kells.
- Bog day event with guest speaker.
- Editing and research for further chapters of “The story of Killconny Bog”.
- Nature talk in the heritage centre.

6. Part 1: Necessary conservation measures

Answer these questions if the activity is “directly connected with or necessary to the management of the site”. Otherwise go to Part 2.

a). List the European site(s) and the relevant Conservation Objectives (include version number of the Conservation Objective).

b). State how this activity furthers the Conservation Objective(s)

c). Does this activity have the potential to impact negatively on any Conservation Objective (CO), Qualifying Interest (QI)/Special Conservation Interest (SCI) for this or any other European site?

Yes ☐ No ☐

d). Are there aspects of this activity which are NOT directly connected with the management of the site?

Yes ☐ No ☐

If the answer to EITHER of the above questions is **Yes** a Screening for AA is required, go to Part 2.

If the answer to BOTH questions is **No** go to Part 5.

7. Part 2: Identification of European Sites within the Potential Zone of Influence of proposed activities

List all European sites which may be affected by this activity because they are linked by an ecological pathway. If the site has a second European designation (SAC, SPA) this also needs to be considered.

Killyconny Bog (Cloghbally) SAC [Site code: 000006].

NPWS (2015) Conservation Objectives: Killyconny Bog (Cloghbally) SAC [Site code: 000006]. Version 1. Accessed 4th March 2026.

Available at: https://www.npws.ie/sites/default/files/protected-sites/conservation_objectives/CO000006.pdf

8. Part 3: Assess the likelihood of significant effects

Provide this information for **each site** listed in Part 2.

List the QI/SCIs for the site(s), their current conservation condition and the Site Specific Conservation Objectives (SSCO) for that QI/SCI. Then answer the questions about the impact on that QI/SCI.

Killyconny Bog (Cloghbally) SAC [Site code: 000006].

Qualifying Interests

Active raised bogs [7110]

~ Overall assessment of conservation status: **Bad**

Degraded raised bogs still capable of natural regeneration [7120]

~ Overall assessment of conservation status: **Bad**

Conservation Objectives for Qualifying Interests.

Active raised bogs [7110]

To restore the favourable conservation condition of Active raised bogs in Killyconny Bog (Cloghbally) SAC, which is defined by the following list of attributes and targets:

- Habitat area.
- Habitat distribution.
- High bog area
- Hydrological regime: water levels; flow patterns

- Transitional areas between high bog and adjacent mineral soils (including cutover areas)
- Vegetation quality: central ecotope, active flush, soaks, bog woodland; bog moss (*sphagnum*) species
- Typical ARB species: flora; fauna
- Elements of local distinctiveness
- Negative physical indicators
- Vegetation composition: native negative indicator species; non-native invasive species
- Air quality: nitrogen deposition
- Water quality

Degraded raised bogs still capable of natural regeneration [7120]

The long-term aim for Degraded raised bogs still capable of natural regeneration is that its peat-forming capability is re-established; therefore, the conservation objective for this habitat is inherently linked to that of Active raised bogs (7110) and a separate conservation objective has not been set in Killyconny Bog (Cloghbally) SAC.

Tick all the boxes below which may apply.

Your answer will determine if the activity is likely to have a (negative) effect on this QI/SCI. Negative effects may arise because of the activity's location within the site; its proximity to the QI/SCI or the size of the land take involved; the abstraction of water or minerals; emissions or waste arising; the types of transport or machinery being used; the length of time involved or seasonality of the work.

a). There is likely to be a reduction in the area of QI/SCI habitat ☐

b). The physical/chemical quality of the environment is likely to be changed in a way which may cause the deterioration of the QI/SCI habitat (e.g. applying lime to an acidic soil) ☐

c). The structure of the ecological community is likely to be altered (e.g. through altered species composition) in a way which will have negative impact on the QI/SCI. ☐

d). A QI/SCI species is likely to be disturbed (e.g. through noise, vibrations) ☐

e). The population size, characteristics or reproductive success of a QI/SCI species is likely to be changed either directly or indirectly (e.g. lighting close to a bat roost entrance) ☐

f). QI/SCI species or habitats are likely to be more vulnerable to change or less resilient to external change (e.g. to flooding, fire or drought) ☐

g). There are likely to be effects on other species /habitats (not a QI/SCI for this site) which are ecologically linked with this QI/SCI and, as a consequence, there are likely to be negative effects on this QI/SCI (e.g. the impacts on geese which are the SCI when their non-QI feeding areas are damaged). ☐

h). This activity will cause a deterioration in the conservation condition of this QI/SCI. ☐

i). There are likely to be other ecological effects not listed above which are likely to have a significant effect on the QI/SCI. ☐

Explain the effects**:**

The potential impacts of the proposed project on the Qualifying Interests of the SACs have been examined and considered.

No likely significant effects or adverse impacts on the QI or SCI features of any other SAC or SPA are anticipated.

If you have ticked a box for any QI/SCI in any of the sites affected by this activity the likelihood of a significant effect cannot be ruled out and the activity MUST be screened IN for AA.

9. Part 4: In Combination Effects

Is this activity likely to cause negative effects in combination with any other plan or project?

(In answering this question you should consider any other consents which have been applied for or granted. For example, other ARCs, planning consents, forestry

consents, or activities authorised as part of an agreed farm or land management plan. List the plans or projects considered).

_____

_____

No ☑ **Yes** ☐ **Uncertain** ☐

If the answer is Yes or Uncertain the activity MUST be screened IN for AA. Fill in Part 5 accordingly.

10. Part 5: Findings of the Screening for AA

Screening not carried out as the activity is “directly connected with or necessary to the management of the site”. ☐

Likely significant effects are expected or uncertain.

This activity Screens **IN** and AA **is** required. ☐

Likely significant effects are NOT expected.

This activity Screens **OUT** and AA **is not** required. ☑

Prepared by: Donna Gavigan, Ecological Assessment Unit

Date: 4th March 2026

11. Part 6: Conclusion

Following an analysis of the project, the EAU determines, in accordance with Regulation 42A(8) of the 2011 Regulations, that an Appropriate Assessment of the proposed engagement activities is not required because it can be concluded, on the basis of objective scientific information following a Screening for Appropriate Assessment, that the project individually or in combination with other plans or projects is considered not likely to have significant effects on a European site or sites in view of the sites’ Conservation Objectives.
